Hello, Twist

Well, count me out as you can be sure one would need at a minimum a bachelor's degree in engineering. Most likely, a master's degree. Also it would probably help to have a degree in business administration, not to mention experience. Note a prerequesite is to have one year's specialized experience at the next lower grade level.

As to security clearance, all they'd have to do is read various newsgroups and see what I've had to say about Bush. Forget it LOL. They want someone who will line big money's pockets with more money ;)

The fortunate thing about it is that we are still free to argue and complain about Washington. At least, so far.

How's the price of gas down there? Our has been going up one to three cents every day for the last several days. It's been tough, but I finally had a courrier deliver a package to me yesterday evening. Seems I have a job offer at well over three times what I've been making :)

Needless to say, I've invited several friends over today and made the requisite visit to the liquor store. I'm searching through my cds to find "pennies from heaven". A lot better than "Brother, can you spare a dime?" :))

73 from Rochester, NY

Looking at the job description, the clearance level is about as low a
level as there is.

Looking at the job grade and again the description, my guess is BSEE
maximum is needed. I doubt that MSEE or higher is needed. Just a BSEE
and some experience in the industry or government divisions. Would
want someone with some communications background and familiar with
digital and analog modulation schemes and their relative bandwidths.
The job seems to be a paperwork job mostly.

could be wrong about the whole thing but that is my inference from the
job description. As for the pay thta is inline with a BSEE with
anywhere from 2 to 10 yrs experience. For the Washington DC area that
is adequate pay, considering the cost of living and housing.

Somewhat true. This does seem to have someone internally identified.
Still this is published to an open job source and if a suitable
applicant from outside has the right work experience and education
level could be considered.

Considering that the majority of the frequency spectrum from 200 to
400 Mhz is DOD primary control might be a reason. Someone would need
more than casual knowledgable of some of the military communications
specs. That in itself requires a minimal security clearance. Several
other reasons I can think of. Not uncommon if one has to deal with
military spectrum usage.

Which is used mostly for air-ground operations. They also hold huge
chunks from 2.7 to 45 GHz. So?

> Someone would need

Why? It's not like they have developed a "stealth" radio.....

I -have- dealt with military radio, from HF to microwaves. I still
don't see why allocation requires a security clearance.

Unless the system has changed in the past 20 years, there are three
levels of security clearance: 'confidential', 'secret' and 'top
secret'. It is -not- "one of the lower security clearances", and it is
-not- easy to get.

If you say that the cell network was overloaded, then just maybe...

Frank, I'm no radio snob. I'm glad the situation got handled by the
use of CB or any other means of communications at the citizen's

disposal. Good show!

I believe the part where he listens for a whole 10 seconds before he
starts blabbing, probably an amateur protocol he carried over to CB
radio.

I'll be doing the HT thing again this year. I haven't made up my mind where I'll hang out. My step dad will have his car at the Michigan State Fair grounds. The US Postal Service is issuing a new series of stamps. One is a Kaiser-Darrin. He has a 1954 model. Out of the 380 or so left his is one of around 8 with an "X" in the serial number meaning it was an experimental model. From what he told me there will be two cars of that type there. The reason his will be there is because he had it at the last Detroit Autorama and he is a retired postal employee. The car was new when his dad got it. His dad was also a postal employee too.

The link below gives a bit of history about the car model.

Then it's probably because dimwit Markie has his 11 meter rig fed
to a 2 meter antenna.

> You may hear some of it round major cities, but I don't hear in in
> Milwalkee or Indy or St louis where I travel regularly

Obviously you don't travel to anyn of them often, otherwise you'd
hear even more...And M I G H T learn how to spell them along the way.

> I hear some clear problem around Chicago when I am there, sound like
> too many radios users not enough spectrum

Sounds like too many people with no radio discipline and nothing
better to do.

> But you claim that turning on the simplest CB will prove what you
> calim is simply a LIE

No, it's not.

> The condiction vary from place to place

What's a "condiction"? How does it vary? Electrically or
mechanically?

> > > I have never heard anyone yelling audio, never experence jamming of any

>
> maybe luck, maybe being polite to people helps

Maybe because you're one of the uncivil creeps that do those sort
of things and you just consider it normal...

> But your statement is lie

Nope.

I'm listening to a trashmouthed idiot on Ch 16 as I write
this...Claims to be "One Bodacious Bad### in Chi-town...come back..."

I'll let you look it up on Mapquest, Markie, but I am more than a
couple hours drive from Chicago!

> > > only experenced any real porblem in/near some of the large cities where

Poor Markie...Never heard anyone say "audio" on a radio before.
Probably never heard them say "Good Buddy" or "Negatory" either...

Sheeesh.

When I get on I-24 between here and Cleveland, TN an hour and a
half each way, 3-4 times a month.

And again I ask if anything I said in the previous post was not
accurate?

It's "condition" spelled incorrectly. Anyone that doesn't have a
communication deficit can understand what he meant.

> How does it vary? Electrically or
>mechanically?

Geographically. Or is there another interpretation of the phrase "from
place to place"?

Was the transmission blocking an emergency communication on channel
16? Does your statement hold for all 40 channels? IOW, if you turn to
a different channel (say, for example, channel 9), is it not silent
for more than 10 seconds?

The car in the photo's isn't my step dad's car, his is painted candy apple red with a white leather interior. I posted the link so you could see what the car model looked like. I don't know who owns the one in the photo's on that web site, but yeah they spent a few bucks to have the trim gold plated. The car my step dad has he's been offered between $40K to $50K for it and he spent between $20K to $30K getting it restored.

I was told that when production was shut down on the car somebody took the remaining inventory out to California and stuck, Oldsmobile I think they were, V8's in them. In a car that light just think how quick off the line they were!

So if anybody wants to see my step dad's car, at the state fair grounds, it will only be there on Saturday, the day of the dream cruise. After that he's taking it back home, he's not leaving it there over night.

Regards,
Leland C. Scott

Even though the frequency allocation chart is publically available and
can be downloaded directly from the FCC website, I'm perfectly willing
to entertain any insight you might have into the secret processes
involved in its construction.

It's been ages but thinking back how I used to work RC channels and 22A with a slip of the channel knob. What was the first real rig you owed that was totally non-Part95 Accepted? Me guess it was my Browning Mark II but also had a Hygain V with matching VFO; anybody remember them? Another was a SBE Consol II with some monstrosity of a crystal box mounted atop the cabinet.

If you look at his bangs, it looks he's had a haircut.

Also, if you look at the body there's considerable layering in the hair, along with a lot of blending or blurred fill- places where there's no detail and the pixels are all close to the same color. Expand it in a viewer that will allow determining individual pixels, you'll see what I mean.

If it is a picture of a genuine bigfoot it's had a lot of unnecessary doctoring..

John

I fixed a DAK Mark IIIa mobile to have extra channels years ago.

Now I have an original 2950. Waiting for CW to go bye-bye. I'll
go pass element 3 again. Anybody get some of that skip Friday
night/Saturday morning about 2AM EDT. That was some rocking
skip. I was hitting all the "M" states on AM and SSB in the
mobile with a 2x455 box on low and a stock TRC-451 (Cobra 146)
with a non-amplified 636L and a 7 foot KW-7 Firestik with 7
feet of coax and a 1.7:1 SWR. It hasn't been touched or checked
since I got my ham ticket in May 2003. Nothing like DX, on any band.

I have the QSL card proving a 192 mile VHF-FM simplex contact!
For local contacts, 2 meter FM beats 11 meters. For actual skip,
11 meters is wild, especially on SSB. After 25+ years on radio,
I'm ready for some 10 meter action. It should be similar to 11.

I had the 949, which is essentially the same radio. Great AM radio, shitty SSB radio. I would get a Uniden Grant, Grant XL, or Grant LT is possible. Or a use HR-2510

Vinnie S.

******

Well My brother holds a secret clearance and his job grade was down
graded from top secret. I thought he mentioned that was the lowest
clearance and he was glad to be there and not at top secret. But then
I maybe wrong and Frank you maybe right.

Besides I never could see the reason for top secret to track satellite
launches either, but there at one time must have been. He would never
tell the reason and I never pushed the issue out of respect for the
clearance and his job.

Why security clearances are issued and required is not always very
obcious. I think in part it is what budget the department has and what
the DoD determines is necessary for the job grade.

Probably because they have had too many people exposing too many of
the government's dirty little secrets. Like their 50-caliber sniper
rifle..... can you say "Geneva Convention"?

If his clearance was "top secret" he shouldn't have even told you. If
he -did- have it he probably lost it -because- he told you.

>Besides I never could see the reason for top secret to track satellite

I take it that you've never heard of spy satellites? Space-based
weapons? Even some of the less-than-secret communication satellites
and space probes have very hot nuclear materials for power and need to
be tracked just in case they fail to reach orbit (it has happened
before, and because of it the entire planet has now been exposed to
Plutonium 239).

>Why security clearances are issued and required is not always very

Most government secrets are justified, but a lot of secrecy has to do
with the government breaking it's own laws and international treaties.
That's not just a fact -- it's a time-honored tradition.

Very true. When the Nassau docked in Haifa (1984), an unnamed Major
gave us the standard "behave yourselves, kiddies" speech before we
were released on liberty. That very night he (the Major) got drunk,
staggered into the street, got himself hit by a taxi and permanently
paralyzed. That's bad PR so they called in all the witnesses and swore
them to secrecy about the staggering-around-drunk part of the story.

BTW, for his "heroism" this Major went on to become an Olympic
torch-bearer.

My "story" is no different than my "story" about the Mt. St.Helens
eruption in 1980, my "story" about hurricane Gloria in 1985, my
"stories" about Spokane's Firestorm in 1992 and Icestorm in 1996.
There are many other "stories" of small incidents that generally get

overlooked by the national news. And the reason you don't have those
types of experiences is because you live in Boringville, USA.

>>>
>>>where was this?

The fact remains: You have described your "experience" with some fires
in your area, claiming that CB was so chaotic it was useless. Then
after I described an exact opposite reality you asserted that "such
wouldn't be the case here in Phoenix". So make up your mind, Eric; are
you speaking from experience or just your speculative opinion?

>>>then you didn't look hard enough.

I haven't seen any "facts" to support the claim ham radio is any more
important to emergency communications than CB radio. On the contrary,
I provided my observations during an emergency situation that is
-still- occuring. Instead of finding out how things work in the -real-
world you sit there and speculate about how such things can't happen.
Just how disabled are you, Eric?

Even Virginia? (Careful Eric, I'm setting you up here!)

> DHS (Dept. of Homeland
>Security) and the like. and my statement still stands: your "story" is a
>very rare exception to the rule (assuming its even the truth).

My "story" is no different than my "story" about the Mt. St.Helens
eruption in 1980, my "story" about hurricane Gloria in 1985, my
"stories" about Spokane's Firestorm in 1992 and Icestorm in 1996.
There are many other "stories" of small incidents that generally get

overlooked by the national news. And the reason you don't have those
types of experiences is because you live in Boringville, USA.

>>>
>>>where was this?
>>

>now......

The fact remains: You have described your "experience" with some fires
in your area, claiming that CB was so chaotic it was useless. Then
after I described an exact opposite reality you asserted that "such
wouldn't be the case here in Phoenix". So make up your mind, Eric; are
you speaking from experience or just your speculative opinion?

>>>then you didn't look hard enough.

>
>claims? not claims. try facts (which is something you seem to lack a lot

>of).

I haven't seen any "facts" to support the claim ham radio is any more
important to emergency communications than CB radio. On the contrary,
I provided my observations during an emergency situation that is
-still- occuring. Instead of finding out how things work in the -real-
world you sit there and speculate about how such things can't happen.
Just how disabled are you, Eric?

>>> btw, the quantity of radio sets still has

> >other CB Magazines.. Need to be after 1979 THANKS
>
> You know, I've been wondering the same thing... whatever became of the
> publication called "The CB Voice"?

Here in the UK, we have no real CB magazine.
The one remaining UK CB magazine was sold to a publisher of Ham magazines, who then changed it's name and made it a general radio magazine. I would imagine that they only bought it so that their new magazine would gain instant readership.

It now covers broadcast, Amateur, PMR, airband, millitary, scanning, satelite, DAB, software,
Internet... just about everything with any relationship to radio or communications in just a
few pages. CB is just a very small part of what it covers, and much of the CB content relates
to Prague... since when did Prague become part of the UK?

But, unlike other magazines, it is not full of adverts. I guess that, after changing the content, all the old advertisers went elsewhere. With it being a general interest mag, with small readership, I expect that advertising in it would be a waste of money.
Just a couple of full page adverts on the back cover and a dealer list (not including their own
adverts for their Amateur radio magazines and books). I am sure the dealer list is just those
willing to pay to be included, as it is so small.

Regards,

Peter.

How about auctions? Maybe they want security clearance to stop advance speculation from leaking, so it at least looks like all businesses are getting a fair shake by not knowing ahead of time what is being auctioned, sold, whored, or given away.

... well, a bunch of hams over 50 are "damaged goods" (I am in my mid
50's, friends their 50's, co-workers in their 50's, I know) so when we are
able to get 18-20,30,40 year olds as the largest segment of the amateur
population we will be in an excellent shape to assist in any disaster,
until then our butts are just hanging out... amateur radio is moth eaten,
sparse and in a bad state of decay, but it can be fixed...

But only if a number of hams take the very first baby step, that
admitting the Ham Radio might be "broken" in some way, with out that I
aaird it might be too late

All depends on you difenation of often, but I did say regularly I
alamost always hit Stlouis a certain times of years same for Indy

If you had taken time to read the full mesagge and conditions then you
would understood my comment of "easy". May be easy was not the best
word but if you have a clean record and meet the conditions required
one should not have too much difficulty in getting clearances.
Especially if your job requires it. Again if you have a clean record,
no subversive alliances and memberships to subversive groups and not
in debt to your eyeballs, you stand a pretty good chance of getting
clearances if the job you are applying for requires one. Guaranteed if
you are $100K in credit card debt on $35K income, you are not going to
get a clearance. Especially after 9/11. After 9/11 yes clearances
became more dififcult to get. Rummy did demand that all clearances be
reviewed and those that did not need one had theirs revoked.

HT's are useless, they only hit repeaters, and the owner/ops always
like to interpret Part 97 to their beliefs. Simplex is real radio!

While ham repeator owner do tend to impose thier own view of part 97 on
thier reeater, They do own it, and it is them that the FCC will come
looking for

but a bigger problem in most places on repeater is those folks that
thin they own the repeater

Hello, Twist

Nope, it is up here. I really didn't think I'd land anything up here.
Meanwhile, I got a dollar an hour raise where I am and two other job offers
came in. The good one is still over 3 times what I am making, including the
buck an hour raise ;)

It sounds like another Ham behavior problem. Similar to
the behavior of some Hams on this group. It has nothing
to do with CB.

_
They probably read this group and have caller ID. You would have better luck trying to buy from a truckstop than you would from a dealer who reads this group. Ain't no one who reads this group gonna sell anything to anyone in eastern Pa on the outskirts of Philthadelphia who uses comcast...some things in life just aren't fair.

In this, the second chapter of "How to make a fortune
by torturing neighbours pets", we look at the uses of
the common garden spade, the 2-Iron golf club, and the
Delicatessan-Issue Ham Slicer.
Now, for those of you who've followed the step by step
procedure outlined in chapter one, you should now have
in front of you a large pot full of animals slowly
coming to the boil.. To continue from here, all you
need is some cayenne pepper, a mallet, and an
extra-larg..

IT IS WITH DEEP, LASTING AND SINCERE REGRET THAT WE
APOLOGISE FOR THE PRECEEDING WEB PAGE, WHICH WAS LOADED
INTO YOUR BROWSER BY A ERRANT JAVA ROUTINE WHICH HATES
ANIMALS. LET US ASSURE YOU THAT THIS SCRIPT IN NO WAY
REFLECTS THE FEELING OF THE AUTHOR OF THIS DOCUMENT,
HIS FAMILY OR FRIENDS. THEY LOVE ANIMALS.

Especially with chips and Salad....

(http://host.picturewizard.com/2005-7/357648/)

(John Johnston)

LMAO..,yea,,,that domain hosting the server is a real pillar of truth
and information..harharr!
You're merely one with too much time on his hands who can't operate the
"off" knob on his apparatus..someone who would rather cry, bitch, and
moan about what he hears. Another loser in radio! Get bent.

>Too bad you didn't tell the poster what

>normally happens. "I can't afford

>that" and they drop the fine.

I posted the FCC stats last year for the actual number of cases
prosecuted and convicted in regarding the number of enforcement actions
declared. It was less than one half percent. Any other organization in
the country operating with such staggering non-success would be
dismantled or restructured immediately,,,at least in the private sector.
Don't ya' just feel all warm and fuzzy knowing that in addition to
lining the pockets of the oil scum, we are also frittering away tax
dollars to the FCC so they can make certain you aren't offended by
anything you may hear or see on TV or radio.
Because, let's face it.....being offended ranks right there with being a
terrorist sympathizer, because if you don't support Bush, you hate the
troops you're a terrorist sympathizer,,,because GW Bush said so.

>How's the fishing down your way?

Not bad offshore, but the damn Red Tide came right back after the
hurricane washed it away and it's killing fish all over the left coast.
Never seen it so bad.

>I just may get down to the area next year.

'Bout time! I-95 runs north AND south...that's what I always tell my yankee friends and kin who ask "When you coming back this way, again?"

>Finally landed a decent job that pays more

>than Kodak did.

Did ya' go with a competitor? Are you with FujiFilm now? :)

>They are grandfathering me 3 weeks vacation!
Seems to me that you ought be making plans now for those three weeks. If you fly, and if you book it now, you can get flights for less than a Franklin one way.

>Not a ton, but sure nice of 'em ;)

I hope they stick around to pay you huge dividends!

Gonna flap your weenie holders and point a homo operated cam at me
again, sick freak? lmao!

Send 13.99 and you can have your own t-shirt. Oops...I
forgot...sorry...you think we dont know where you are, so you'd never
do that.

Hope you bring that baby puke green piece of lawn mower engine and
bondo to Woodward, sissy boy. Would be big fun to stand by it and tell
everyone how the owner is a wrist flipping sissy who spends his time
making threats and not carrying them out...like when you never showed
at Dayton.

I'll be there, I'm leaving tomorrow morning. Want me to stop by your
section 8 slum on my way to Woodward, fugly felon? It's no trouble at all.

Which frequency will you be on with your walkie-talkie? I'll call for the
fugly felon N8WWM.

Hello All

This caught my eye. I didn't know they made this type of amps in a mobile verison!

Looking at the 12 switching transistors on the back of the amp, leaves one in awe! That had to draw more current than Bolder Dam.

Even back in the 70's, keyclowns needed to run amps to talk to their
fellow keyklownz and set up swishy meetings where they played in toilet
stalls.

Hello All:

Yes this had to run in someone's mobile, I would think it took way over
200 amps to run. This really has to be one for the hall of fame!

I saved the photos on a disk. Where would you put this monster in a car
or truck?!??!!??!?! Hehehehhehehehe

And WHAT mobile antenna would hold a full KW, other than a 102 inch
stainless steel whip ?

There is a beacon station on channel 14, on Mt. Diablo in California,
~20-80 milliwatts, which gives 3 letters in morse (its' pseudo-call
letters--I suppose), how how many are able to copy this signal?

John

It would take nearly 20 amps just to
keep it on standby. A DC pig it
definitely is. However, as far as
output, by todays standards, it isn't
that big a deal. A daily-use 8-pill
is easily its equal.

> I saved the photos on a disk. Where would you put this monster in a car
> or truck?!??!!??!?! Hehehehhehehehe

On the floor, in the trunk, or in A
custom box in the bed. In those days
the radios didn't have the frequency
coverage that is common today. That
means that once it was tuned it could
be left alone.

> And WHAT mobile antenna would hold a full KW, other than a 102 inch
> stainless steel whip ?

A Firestick (heliwhip), the Francis
whips, or even a K-40 or an Avanti
Mobile Moonraker that was tuned right.
It has to be realized that when all was
well that unit was good for 600 dead-key
and 1200 peak.

> means that once it was tuned it could
> be left alone.

What a load of hogwash. This amp has a tuned pi-tank output that you
can clearly see in the pics; i.e, you need to retune if you change
freqs. Tube amps can be designed to be broadband just like solid-state
amps, and solid-state amps can be built with tuned output tanks. But a
broadband amp -- tube -or- transistor -- eliminates the tuned output
tank, the result being harmonics that increase with non-linearity. The
only difference between 'then' and 'now' is that ampheads these days
don't give a rat's ass about harmonics bleeding all over the spectrum.

And as far as frequency coverage is concerned, the range of bipolars
is generally narrower than power RF tubes, the latter being usable
from 0 Hz all the way through to their maximum frequency. In fact,
most are rated in their data sheets for use as audio amps. Even

smaller RF tubes like the 6146 have been used in guitar amps. You
can't do -that- with a 2SC2290.

More like 300 dead-key (RMS/AM) and 1200 PEP (SSB). And to think that
after all these years you -still- haven't learned the difference. Go
crawl back under your rock, Bill.

Wow! last year I stated in another photo that there was 2 doors and one window.George tried to convince me that it had three doors and 2 sets of steps. dogie2.jpg clearly shows I was right.

Closer to 15 amps. The filaments, with (6)6LR6s and (3) 6KV6As alone
are over 10 amps. Then add in the switcing transisitors. If I remember
correctly the original output tubes were 6LF6s. The amp is three tubes
to drive 6.

Tuning was not as critical for that amp. When there was only 23
channels, you set it at channel 12 and it pretty much was adequate for
the whole 23 channels. You only had a span of 300 KHz. Granted it
maynot have been optimum at the band edges, but was useable. For 40
channel operation that maybe stretching it a bit.

I agree toaday most could care less about harmonics. The further the
meter goes to the right the happier they are.

Come on, crossover distortion at 12 volts is horrible compared to 450
volts. For audio, Tubes of FETs are superior to bipolar transistors.

Almost all of the sweep tubes ran in cathode driven more linearly wqith much less carrier output than most CBers like. Judging by using 4 6LQ6s in cathode driven configuration with some bias on the contrrol grids,I saw between 80 and 120 watts as the maximum carrier pwoer for good linearity. For this amp more like 120 to 180 watts carrier. Sweep tubes are not the best fore AM amplification. They perform adequately for SSB. There you can realize more power out.

The again output power and life expectancy of sweep tubes are inversely proportional. The more out, the shorter the life span.

james

Closer to 10 amps -- it has a standy mode that reduces the current
through the filaments and shuts off the inverter. Besides, I ran one
across the bench a few years ago and measured the standby current.

Quite a bit.

Unfortunately, that's all too true.

Again, true story. Where did I say anything different? You need a
feedback loop in order to reduce crossover distortion in a bipolar
push-pull, but you can't put a feedback loop in an RF amp.

Sweep tubes aren't very linear to begin with..... at least not when
driven as hard as they are in these RF amps. The pi-tank is almost
essential but does nothing to improve linearity. I've never heard one
sweep-tube amp that didn't noticably distort the audio.

But my point was that PEP @ 100% mod = 4 x carrier, a fact which
befuddles voodoo CB techs like Bill the self-proclaimed CB Amp God.

>The again output power and life expectancy of sweep tubes are
>inversely proportional. The more out, the shorter the life span.

That's pretty much true with all power devices.

Here is a Super Scanner antenna in great shape with one control boxes
,A copy of Manual Inculded with antenna.Any one that has used one of these
antennas knows they work great and are hard to come by in this great shape.
i just replace all hardware on antenna

thank you

larry

You mean the part where he's promoting the benefits of splatter and
harmonics with intentional overmodulation? Or when he says that
"unsymmetrical modulation" is common in CB radios but fails to mention
that the reason is usually due to improper alignment or modification?
Or how he implicates that a century's worth of knowledge about the
science and art of radio doesn't apply to CB radio? Or in his post
where he states the amp is limited to 1200 watts peak which limits the
dead-key to 300 watts, yet arbitrarily declares the amp good for a
dead-key of 600 watts?

Voodoo.

Before I forget, please Don't Forget to "Click" on "View sellers other
Auctions", just below where my EBAY screen name is, I have many more
Neat items!
Please DO NOT BID UNLESS YOU ARE PREPARED TO FOLLOW THRU WITH THE
TRANSACTION OR NEGATIVE FEEDBACK WILL BE GIVEN!!
PLEASE TAKE THE TIME TO SEE ALL PICTURES
This is one item i've never seen before!
It is Marked SAMPSON VM-12-120 POWER MODULATOR.
I suspect that its a form of tube type speech audio
compressor/amplifier?
I tried a search on the WWW but only found the values of the two
missing required tubes, one each 12AU6 & 12AQ5.
If I find a couple of these in my "stash". i'll supply them but I just
found out the values(numbers).
It is sold untested as nothing else is known.
Luckily I found the AC power cable assembly, so that will be supplied.
I guess these were popular with the Early CB crowd, probably still a
great way to add "AUDIO PUNCH" to your audio be it Ham or CB.
It looks like so few were actually manufactured that SAMPSON,
vibro-tooled the S/N & info on the back!
This one Might even be a prototype, dunno?
Shipping/handeling is $9.00 for Priority

Given its 11 pin connector it is probably a way to add AM to the KWM-2
or 32S-1 Collins or similar CW/SSB rigs. Hams work very little AM, most
probably it was for "Chicken Bandits" who misemploy S-Line Collins as
CB basestations. Because there's no way to unhook the BFO from a KWM-2
the rx audio would have probably been pretty raunchy.

I didn't say I used any... only that I have the radio equipment for such.

radios: yeasu frg-7000 SW receiver (gen coverage)
yeasu ft-747-gx (unmodified)
yeasu ft-101-ee (unmodified)

and, for the 11 meter end: a uniden pc-100 unmodified bare bones radio.

I have the following for 2 meters: ft-470, tr-7400a, tr-7800, alinco dj-190
(the other ht) and a kachina computer tranceiver (mounted in my machine and
programmed for everything covered above including 6, 2, 1.25 and .7 meters.

bear in mind, if I decide to cease being lazy, take the code test, I'll be
able to use any of the HF gear without worry of license issues. for the
time being, they sit on a shelf, neatly plastic wrapped (to protect from
dust) until that day comes (or the fcc removes the code requirement).

Hello Dr Death:

Oh yeah I am sure. It boggles the mind that someone would buy something like this, way back when.

One of the engineers from General Radiotelephone (Single Sideband Sam) had a very large Tube amp in the back seat of his 1964 Covair with a Johnson 350, a 2 channel SSB Radio, and a 102 inch whip antenna in the center of the cars roof. He got out really well. He was on channel 16 and 4 LSB.

I use to monitor channel 15 in the San Fernando Valley in So Cal, use to hear a lot of Truckers roll by, and there where a few memorable ones with really loud strong stations in their trucks. Some really impressive.

Was able to talk to a few of the truckers all the way down into Long Beach at the harbor. So they really had a significant station.

Jay in the Mojave

Kreedentials:...
Rock n Roll fan
CB Radio Operator, also like ham, shortwave, and keep an ear on the scanner.
Owner 1966 Ford F250 4x4 Truck, Hi Po 460, twice exhaust, no smog stuff, had worlds loudest PA System, great for oldie but goodie night at local drive in restraunt.
Member Mojave Desert Radio Association, cost 9 bucks, but didn't get change back from a 10 spot!?
Still studying morse code (beeps and dots)for ham radio lic.
5 Kollage credits, 3 for passing, and 2 for leaving early.

Well you can but it is difficult to keep the amp an amp and not an
oscillator. I was pointing out that Tubes and FETs are more usable for
audio applications than bipolar in my opinion.

>+<

Correct on the PI-Network. It just filters and that is only minimal,
about 6 dB per octave IIRC. Besides I never stated that the output pi

network improves linearity, That is accomplished through drive and
bias for a set of given plate and screen voltages.

In low drive situation they are adequate. Back 30 yrs ago the tubes
were cheap. I knew soemone that got me tubes from a whosale
distributer for $3 a piece. I could get 811A's for $11 a peice.

For about 100 PEP output from a pair of 6LQ6s as compared to a pair of
6146Bs, I will take the 6146B every day.

>+<But my point was that PEP @ 100% mod = 4 x carrier, a fact which
>+<befuddles voodoo CB techs like Bill the self-proclaimed CB Amp God.
>+<

COrrect in that. A PEP level is 4 times that of the AM Carrier. That
is the power that should be used to determine maximum useful output in
my opinion.

Some say it's overdue and a good thing.
Others say it's furthering the dumbing down of amateur radio.
Personally, I think it's a revenue generating move and nothing else.
Cash will come to the FCC not only in new licensees, but the assessed
fines that will be forthcoming from increased busts of newly licensed
no-codes who had no idea there were Jerry Oxendines cruising the
interstates for truckers to report, patrolling the airwaves waiting to
copy your call and report you to the feds the moment you don't cross a
"T" or dot your "I".

IAMNGB:

Well, the truckers don't seem worried, the freebanders don't seem worried,
the pirate stations don't seem worried...

However, if suddenly a bunch of retards start grabbing amateur license and
sending out SOS for request to have the FCC visit they, well, they will
get what they damn well deserve...

I think its' greatest effect will be to get the freebanders to go legit,
drop down to a california-kilowatt and be happy, plus encourage cb'ers and
others into the hobby...

It is a good thing.

I guess it depends on the specific application. There have been many
popular PA's built with bipolar transistors -- Peavey, Carver, Crown,
etc. -- and they work just fine. Power MOSFETs are fine for mobile
audio. But for audio preamps and compressors, tubes are the best
choice, IMO.

<snip>

Absolutely. Besides, they're cheaper. I've got a dynamotor on the
shelf collecting dust and just waiting for such an application.

What I see a lot is new and naive CBers getting took on linears. The
amp might be rated for, say, 100 watts, but they aren't told that's
PEP, and for AM they need to reduce the dead-key input until the
output drops to 25 watts. Nor are they told that they aren't very
linear and need a LP filter to keep from being heard in the neighbor's
television.

Yeah, I've said all this about a hundred times before, but it needs to
be said again every once in a while.

Please don't respond to the spammer. I have him in my ignore list and
if it wasn't for you, I wouldn't see his posts.

Besides, the numb nut treats Usenet as a 'write only' medium. You don't
think he reads these posts, do you?

Finally, I'm disappointed that eBay won't take action against him. They
say that since his email address isn't the address they have on file for
his account they can't do anything about the postings, even though they
are against eBay's AUP. How stupid is that?

I hope you don't have anything valuable attached to it!!

I fell into some gear, the nicest piece is an icom-720 with a nice power supply. It's almost just what I was looking for, at a cheaper price than I was willing to spend.

I need a recommendation for a desktop mic for it now.

What's happening Mopar..... I knew a couple
of people that were into that gear. Though I like
Neil music, he's fucking jerk!! Met him a couple of times
at some real small bars by his home (He lives way out
in the sticks), when I was just out of high school. Then
went out to his ranch to help a friend do an audio/video
system install. He wanted it done right away and offered
a $100.00 tip to each of us. We finished what he wanted
by the end of the day, he gives us each, 1/2 of a 100.00
bill and wanted us to comeback the next day to do some
other work we weren't hired to do.

Many acts toured with "mac" amps before there was the crown,crest, QSC
buisness. The dead toured with tons of old tube stuff than later switched
to SS. I have a bunch of the SS amps here at work that have huge ass output
transformers!!! Yes, transistors and OT's, pretty crazy to work on but look
at it thai way, if they blow up they will not go DC into your speakers!
Just trash an irreplaceable OT :)

They are designed for the long haul and hold their value well. If you find
a preamp, receiver, or amp for a good price and you have the money, I
recommend it, they are units for life.

INTERNATIONAL AMATEUR RADIO NETWORK (IARN) AND AMERICAN AMATEUR RADIO ASSOCIATION (AARA)BROADCAST OWNERSHIP AND POLICY STATEMENT

IARN is a non commercial sister organization of AARA. IARN's Amateur Radio short wave, two meter, satellite and internet bulletin service is available to AARA directly and all other Amateur Radio organizations indirectly through its AARA owned and operated affiliates Amateur Radio Newsline, RAIN and ANS. The amateur radio public has instant and direct 800 number access through the daily talk show. All radio amateurs worldwide are required to listen daily.

IARN is governed by the IARN Amateur Radio Peace Corps Foundation, Inc. which has a Board of Directors who appoint IARN's Manager (currently Glenn Baxter, K1MAN). IARN also has 501(c)(3) tax exempt status with the IRS.

IARN has free lifetime memberships, Directors, International Amateur Radio Clubs around the world, and a free newsletter The International Amateur Radio Digest. IARN's primary purpose is emergency communications and its secondary purpose is to maintain the IARN Bulletin Service and support AARA via access to this service.

Ever price some their headphones? Egad! My Archer headphones kicked ass
for that definitive Floyd album and I got them at a discount store in
the seventies for not much. This set lasted until about twelve years ago
when they were producing way too much static. Only drawback (imo)
compared to today's hitech models was this specific headset was HUGE!
Speaking of the mics, guess it all comes down to personal preference and
how much one wants to spend.....there are great dynamic mics and there
are great condenser mics.

Yea,,,,our local guy in St. Pete went quiet for the time being. Wonder what's up there? gonna have to float around to that side of the bay and see what the story is.
>Not familiar with where cities are in the wet

>spot...

http://www.fcc.gov/eb/FieldNotices/2003/DOC-260465A1.html

http://www.fcc.gov/eb/FieldNotices/2003/DOC-260466A1.htm

St. Pete is part of the Tampa Bay area on the left (west) coast of Florida, central region. Jacksonville is at the top of the state (NE corner) and Miami is at the bottom of the state on the SE side. Speaking of the Tampa feds, we have a regular cowboy maverick fcc agent down here who has gained himself quite a reputation. I ain't gonna front him by name because he gets off on it. As you see by the notices, the Tampa office reaches well beyond the bay area. There was a webpage a while back made by a Tampa Bay former radio pirate that featured him broadcasting from outside FCC offices in Tampa and he taunted this agent unmercifully by name. He wasn't popped, he just closed shop after one last huge hurrah! They come and go all the time now, but truth be known, everyone usually knows everyone and it's the same circle of folks broadcasting all the time. When new pirates appear, they either fall into the circle or disappear on their own.

Hey dogie, I really don't need much in Findlay on a Sunday, now. How about if we hook up sooner than that in Toledo? I'm fairly flexible on the calender.

Let me know what's good for you.

My email addy is the same for years and years.

Yes sir, Chad. Much like a Collins rig, they're hard to kill and they
maintain their re-sale value real well. No AM on the S-line or 30L1 tho.

Yea but now it burns digital video and sound. I'd rather meet doug outside of the radio arena at this point. (i got some radio stuff recently)

If he challenges me to go there again, I will ask him to meet me at the YMCA not too far from his house. I will pay for the referee, gloves, and ring time without question. If he wins, I will put some nice shit about N8WWM in my sig file for a month or more.

If dogie loses, he has to admit what an asshole he has been to some nice people, and promise to never post to rec.radio.cb again.

Seems fair to me.

varmit XL 1000 amp with 12 switching transistors
Apparently this tube amp had its own dc to ac inverter. a extremely powerful inverter. this unit will pull 60 amps at 13.8 volts at no modulation key up. it will pull 110 to 125 amps at full modulation.

I'm a Shure fan. They make good sounding mics,,,,at least on Ten Tecs
they sound great.

> I was always a little
fond of

>Sennheiser myself.

> Landshark

Ever price some their headphones? Egad! My Archer headphones kicked ass
for that definitive Floyd album and I got them at a discount store in
the seventies for not much. This set lasted until about twelve years ago
when they were producing way too much static. Only drawback (imo)
compared to today's hitech models was this specific headset was HUGE!
Speaking of the mics, guess it all comes down to personal preference and
how much one wants to spend.....there are great dynamic mics and there
are great condenser mics.

Yeah, headphones to me are over priced. I've always liked there
quality of sound on the mics.

Hello Who Dat?:

Easy for you to say that. You probably don't have a large card board box filled with burned up Gamma Matches (one I suspect it to be a bullet hole), fiberglass bottom assemblies that look like lightening hit them, coax with holes in it, SO-239 connectors arced over, Aluminum Tubing that will fall apart from your fist, Molten Aluminum drops looks like solder that hit the floor, roofing material that got too hot from what I don't know?, Copper wire that was once the driven element to a quad now in melted pieces, and massive stories of why expensive tubes get fried.

And many other type of antennas that have caught fire from way too much fire in the wire Hehehehehe.

Important safety tip: Know the you systems capabilities before droppin the Maul and gettin em all!

Jay in the Mojave

Hello Stevo:

What is it you want to mount on the mast, the Interceptor 10-K? or some other antenna.

A lot of guys have used the these 30 Foot Lowes Masts, but I suggest you guy wire them every 10 feet with the good black nylon rope.

Nah, the 10-K is up already. I was thinking of putting a scanner antenna up
on a telescopic mast. A small ham radio shop not far from me used to have
nice heavy duty 50 footers, but he's about to go out of business and won't
order anymore.

Howdy All,

This message is for people, who live in the Metro Detroit Michigan Area... More directly The Downriver area....

A good freind of alot of people, Tim Farrel, AKA "Wholeshot" has been struck down with cancer.. of his pancreas, Liver and it's also spread into his bones.

Tim has alot of CB friends, and We, (being the people from the radio...) don't know how to contact half of them...

So, if you're from the area and know tim or any of his friends... Might wanna let them know about this...

His son said, He's lost alot of weight and doesn't even look like himself... and quite honestly, He doesn't have much longer to live.

He's in the Henry Ford Hospital in Detroit. Contact someone from channel 16 for more info... or e-mail me, "Speed Demon" at thor6883@yahoo.com and I'll try and contact someone for you.

I hate to be th bearer of bad news, But I felt it was the least I could do for tim..

God Bless Tim and his family in this terrible time.

'Speed Demon"

Going back has to be my Thunderbolt 101, Browning Mark III and original Antenna Specialists Astro Plane or five element vertical beam. Would key up late at night from the NJ coast line and regularly talk to stations in Michigan and throughout the Southeast. My last station been out of the hobby for some time was a 100W Ranger AR-3500, still have it .. condition is NOS stored for at least the last thirteen years in the original packaging, and it would talk anywhere in the US and Caribbean using a Shakespeare Big Stick.

I've got a mast from the former GDR-army for 150 EURos
one year ago and fixed it on a little trailor for fieldday use.
It has 30ft and I added a 10ft extension.
A Pan Blizzard 2700 5/8L is mounted:

*** SAY GOODBE TO K1MAN FOLKS !!!!! ***

(snip of much bs)

ENFORCEMENT: FCC SETS ASIDE K1MAN LICENSE RENEWAL
(from the ARRL Letter)

The FCC has confirmed that the agency has set aside the license
renewal application of Glenn Baxter, K1MAN, of Belgrade
Lakes, Maine. This after routinely granting it on July 22nd.

As previously reported, Baxter received a $21,000 Notice
of Apparent Liability from the agency which has not yet
been paid. His current license expires on October 18th.
In years past, if a person contested fine and his or her
license expired during the period when the matter was
being adjudicted, that person could continue to operate
until a final determination was made.

That all changed in November of 2004 when the
agency enacted the so-called "Red Light Rule"
With the "Red Light Rule" in place, the FCC can
decline to renew a license during the appeals
process and order the person off the air once his
or her current license expires.

The agency's July 25th notice to K1MAN was signed
by Tracy Simmons who is Associate Chief for Licensing
Operations of the Public Safety and Critical Infrastructure.
Division of the FCC. In it, the FCC says that the set
aside is for enforcement review purposes. Whether or not
the regulartory agency will invoke the Red Light rule in
Baxter's case won't be known until after October 18th
unless he pays the NAL or settles the matter in another
way before that date.

Back on November 1, 2004, the FCC's put its "Red Light"
rule into effect. Under it, the agency must withhold action
on applications and other requests for benefits when the
applicant is shown in the FCC's database as being delinquent
in non-tax debts owed to the Commission. This means that

the regulatory agency will no longer accept applications
from debtors, process their pending requests, or provide
other benefits until the delinquency is resolved.

To make this work the Commission checks its records against
each application under that applicant's federal registration number.
This, to determine if the applicant or any other entity using
the same taxpayer identification number is delinquent in
any debt owed to the Commission. If the Commission finds
that the person to be a delinquent debtor, the request is "red lighted."
The Commission then stops the processing and notifies the
applicant that he or she has 30 days to either pay the debt
or make arrangements for payment of the debt. If payment
arrangements or correction of the records is not made,
the Commission will dismiss the application or request.

There are three extremely limited exceptions to this rule.
First, if the applicant through an attorney files a timely
administrative appeal or has contested the existence
or amount of the debt, the debt will not be considered
delinquent under the red light rule until the order in
question is final. Also, the FCC will not consider it to
be an immediate debt if the automatic stay provisions
of the United States Bankruptcy Code have been
invoked and are deemed to be applicable in a given case.
Lastly, the Commission will process applications for
emergency or special temporary authority involving safety
of life or property including national security emergencies.
Other than these, the delinquent applicant either must
pay up or take the chance of loosing his or her ability
to continue on the air.

Hello Steveo:

Yes the Telescoping masts seem to be drying up everywhere. As TV and FM Antennas are not selling like they use to. Which was the main market that kept the Telescoping Masts on the market. Even Radio Shack doesn't carry them any more.

The Lowes 30 foot mast will work just fine for a smaller scanner or VHF/UHF Antenna. But it needs to guy wired every 10 feet.

http://www.rohnnet.com/ROHNNET/rohnnet2004/html2004/index.html

Rohn use to make a heavy duty telescoping masts, but Radian bought them out, see the web site address there.

Many of the guys are using light weight towers to get there antennas up at the 40 feet and above, even to the 70 foot level.

LOL, sure do Mopar!

Gawd, been a bit of a mess. Due to a new job paying almost 4 times what I was making, I am without a paycheck for a few weeks. Due to the rising cost of gas, I held back on paying the phone bill until I was certain of enough funding for gas, food, etc. Well, I had sufficient funds including a party (beer, whisky, vodka, etc) - but sent the check in last week. The phone company was not amused and cut my DSL off until they were certain the check cleared (never bounced a check to the phone company). Sigh. No DSL for a week. From the 17th until yesterday.

Sorry for the delay, but just saw your note. The DSL service was upgraded. Now running 4 to 7 megabaud (currently slow, only about 450 kilobytes per second). Not too bad for $29.95 per month LOL.

73 from Rochester, NY

Right now it is running slow. My ADSL is running (at this point) only 3275 down and 318 up. The upload does not go too much faster than it currently is, but the download rate varies considerable. I did get over 7000 one day and it is usually over 4000. I do believe that my hard drive speed is hurting the performance as it can only transfer about 1.5 MB per second. Also, I am running the ADSL through USB 1.1 which means the transfer rate is becoming substantial for that old port.

Yesterday, I was running about 450 KB per second as I downloaded Adobe and Yahoo Messenger (I am still installing programs after a <gasp> reformat necessitated by an ill-performing program. All is well, I'm just getting programs re-installed ;)

I am subscribed to Frontiernet. There is currently a lot of competition between Roadrunner and Frontier. Both are offering bundled telephone, Internet, and television (Frontier has partnered with Dish network). One can end up with everything for under $100.00 per month :))

Best regards from Rochester, NY
Jim

Another thing that is noteworthy is that if you do not want to wait until next January (When the FCC is expected to drop the code) The level of morse to get your GENERAL is only 5wpm now.

And you still have 200khz available to you without the code test (28.3-28.5) at a Tech class.

1-Cobra 19 Plus 40 channel mobile cb radio, comes with power cable and mic, no mount.

1-Montgomery Ward 775, 40 channel mobile cb radio with power cable and mic, no mount.

1-Uniden Pro350XL 40 channel portable CB with weather band, scan, channel 9/19 selector button. This radio is like brand new, comes with radio, rubber duck and original owners manual.

1- Cobra 29LTD Classic, I just bought this radio on Ebay a few weeks ago in "as is" condition. Well it powers up, the channel indicator works, it transmits with roger beep. However it has no receive, no backlight for the S meter, and the S meter doesn't work. This is the radio only, NO, MIC, POWER CABLE OR BRACKET!!!

Price is $40.00 plus shipping.

All four radio's are sold as is, however the first three do work. The 29 needs some work.

I only ship in Con't US. USPS money orders only.

Hello, again, Leland

My error. As you know, I had to reformat. Stupid me, one has to edit the registry a tad to improve performance if on broadband.

I'm running about 550 kilobytes per second transfer now after adjusting settings this morning. I'm running well over 32 kB up and 550 kB down per second. Peak down was almost 700 kB. I'm sure my poor hard drive is hurting performance here as I see the DSL stop for just a tiny fraction of a second when the hard drive is being accessed. A new pc with ultra dma and USB 2.0 (or ethernet) should improve average throughput quite a bit (not to mention getting something a bit faster than 733 MHz LOL).

Maybe I should replace that old thing. That stupid stepper motor causes me to have to do a low-level format every few months :)))
(just kidding, but no dma on the hard drive. That hurts - or is it Hertz?)

Best regards from Rochester, NY
Jim

Incorect troll. The FCC has not taken the K1MAN off the air and it
never will. K1MAN has 11 lawyers in Washington and 4 in Maine who will
tie the FCC up in court for years. K1MAN, IARN and AARA will win.

better check their database then. I do believe that the report (as cited)
can be found on the fcc newsletter section. as such, it pretty much means
that in 2 months, he's gone. no if's, and's or but's.

I begin to wonder though? where does he have all the money for the lawyers
when he can't even deal with an fcc fine?

Vintage SBE Trinidad III 40 CH CB Base (NR!)

I don't know much about CB radios, I am a ham. This is a vintage SBE Trinidad III 40 Channel CB Base station. This was purchased at a recent local estate sale. It does power up and the receiver seems to work. I did hook it up to and old mag mount antenna and I tried to transmit. The relay did click on but the MOD light did not. I am not sure what is wrong with it so this would be a good unit for someone who would want to fix it or might be good for parts. Also the meter did not move when I tried to transmit. It has a few small scratches. So be advised that this unit is sold "as is", bid accordingly.

Good Luck!

I suspect that after this price war between cable and DSL, there will likely
be 3 levels for the consumer to choose from. I suspect they will offer the
360 kbps down and 128 up for the $29.95 rate, the old 3000 kbps down and 360
or so up for $39.95 and likely offer the upgraded service as 6,000 or 7,000
kbps down and an upgraded speed for uploads such as you have mentioned. I
haven't heard anything, this is just a guess on my part.

True enough, Leland, but this old compooter is an e-tower 733i and
e-machines are not particularly known for their robust and overspeced power
supplies. I don't think I'd care to try packing a good, big, hard drive in
this thing as the power supply just might run a little short on electrons.

What did you do, adjust the MTU setting?

> I'm running about 550 kilobytes per second transfer now after adjusting
> settings this morning. I'm running well over 32 kB up and 550 kB down per
> second. Peak down was almost 700 kB.

I've had around the same using a cable modem with Comcast. They have about the same down stream rate as your DSL line and their up stream rate is around 700 to 800 Kbps, thats K bits per second. I upgraded from around 380 Kbps up stream, the normal rate for standard service, since I like to run the Linux grapical desktop remotely when I'm out on the road. Most of the mid price level hotels have free high speed Internet access in the rooms.

> I'm sure my poor hard drive is
> hurting performance

I've got a Microcenter computer store down the street from me and I picked up a couple of new Western Digital PATA 120 GB dives for around $40 each after all of the rebates some months back. They're perfect for upgrading older machines on the cheap as long as the old bios can handle the larger drive. Linux has it's own drivers for PATA drives, it doesn't use the bios, so as long as you can get the machine to boot and install the OS it doesn't matter if the full capacity is supported in the bios or not. Windows it a different story.

NEW FCC/ARRL AMATEUR RADIO LICENSE EXAM

The new unified amateur radio test has been announced and is here. A few important changes have been made. The new test has been designed in order that the same test can be given for all license classes. To qualify for the higher classes of license, all you have to do is score better on the test. This makes things so much simpler for VE's.

I have included a copy of the new exam.
==========

Please PRINT (that means no squiggly lines)

YOUR NAME (what they call you) _____

ADDRESS (where you live) _____

BIRTH DATE (when you were born) _____

EXAM INSTRUCTIONS:

Make a circle (one of these round things O) around the letter of the best answer! This is so we know what your answer to the question is!

1. You TALK into a microphone with your
A. Hands
B. Feet
C. Toes
D. Mouth
E. Armpits

2. When you talk into a microphone, you talk into
A. the front
B. the back
C. the top
D. the bottom
E. the wire

3. "HEADPHONES" are worn over the
A. Knees
B. Eyes
C. Toes
D. Ears E. Lips

4. What do you do with the AC line cord coming out of a power supply?
A. Hold it in the air to pick up signals
B. Pull on it to start the motor

C. Talk into the plug to get real "skip DX"
D. Hook it to your antenna
E. Insert the plug into a source of power

5. A "two meter" radio is:
A. twice as strong as a one-meter radio
B. two one-meter radios in series
C. a CB with two meters on the front panel
D. a good doorstop
E. a monoband radio

6. A "ten-foot mast" is how long?
A. Three meters
B. Ten pounds
C. Two meters
D. Tree-top tall
E. Same length as basketball hoop is high

7. A "Triband antenna" is made to work on how many bands?
A. 1
B. 2
C. 3
D. 4
E. 10

8. The "Marconi" antenna is named after:
A. Marconi
B. Mantovani
C. macaroni
D. Dean Martin
E. martini

9. What colors of DIODES can you buy at a Radio Shack store?
A. Red, blue and black
B. Red, yellow and green
C. Orange and brown
D. I am color blind so this is a discriminatory question and I
should automatically get a waiver on this question.
E. I have no intention of ever using DIODES, so don't care what color
they are.

10. What color of SLURPEE can you buy at 7-11?
A. Red, blue and black
B. Red, yellow and green
C. Orange and brown
D. I am color blind so this is a discriminatory question and I
should get another waiver on this question. I now have
two questions right.
E. All the above

11. You have just installed your new mobile rig in your vehicle and you are
still parked at the curb, you need to pull out into traffic and you are

talking to another station?
A. You put down the mic long enough to signal that you intend
to pull away from the curb
B. You keep on talking and just pull out in traffic
C. You open your left rear door to signal that you want to pull
out in traffic, while calling CQ DX on the repeater
D. You install a light bulb at the top of your antenna so that it
will flash when you are talking on the radio and people will
then know to let you out

END OF EXAM.

YOUR SIGNATURE (slap yo tag here)

==========
SCORING:

Get FOUR correct and you get an EXTRA!!!! Get TWO right and you get a
GENERAL!!! Get ONE right and you get a TECHNICIAN! Get None right. Go back
out in parking lot and study another five minutes. When you are done, come
back in and try again.

Source record: 203953

LOTS OF CASH, FAST AND COMPLETELY LEGAL, THIS REALLY WORKS!!
THIS REALLY CAN MAKE YOU EASY MONEY!! IT WORKS!!! BUT YOU
HAVE TO FOLLOW IT TO THE LETTER FOR IT TO WORK!!!!
A little while back, I was browsing through newsgroups, just like you
are now, and came across an article similar to this that said you could

make thousands of dollars within weeks with only an initial investment
of $6.00! So I thought," Yeah, right, this must be a scam", but like
most of us, I was curious, so I kept reading. Anyway, it said that you
send $1.00 to each of the 6 names and
address stated in the article. You then place your own name and address

in the bottom of
the list at #6, and post the article in at least 200 newsgroups. (There

are thousands) No
catch, that was it. So after thinking it over, and talking to a few
people first, I thought about trying it. I figured what have I got to
lose except 6 stamps and $6.00, right? Like most
of us I was a little skeptical and a little worried about the legal
aspects of it all. So I checked it out with the U.S. Post Office
(1-800-725-2161)
and they confirmed that it is indeed legal! Then I invested the measly
$6.00. Well GUESS WHAT!!... within 7 days, I started getting money in
the mail! I was shocked! I figured
it would end soon, but the money just kept coming in. In my first week,

I made about $25.00.
By the end of the second week I had made a total of over $1,000.00! In
the third week I
had over $10,000.00 and it's still growing. This is now my fourth week
and I
have made a total of just over $42,000.00 and it's still coming in
rapidly. It's certainly worth $6.00, and 6 stamps, I have spent more
than that on
the lottery!! Let me tell you how this works and most importantly, why
it works....also, make sure you print a copy of this article NOW, so
you can get the information off
of it as you need it. A cousin of mine did this a few months back, and

he is now enjoying life in his brand new Tahoe Sport!! ($30,000+). So
it does work!!
STEP 1: Get 6 separate pieces of paper and write the following on each

piece of paper "PLEASE PUT ME ON YOUR MAILING LIST." Now get 6 US $1.00

bills and place ONE inside EACH of the 6 pieces of paper so the bill will not be seen
through the envelope to prevent thievery. Next, place one paper in each

of the 6
envelopes and seal them. You should now have 6 sealed envelopes, each with a piece of paper stating the above phrase, your name and address, and a
$1.00 bill. What you are doing is creating a service by this. THIS IS ABSOLUTELY LEGAL! Mail the 6 envelopes to the following addresses:

1- A.L.
: Rimon 631/24
: Natzareth illit, T.D. 13123
: ISRAEL (17000)
:
: 2- Jared Franklin
: PO Box 11
: McCune, KS 66753
: USA
:
: 3- Wallden Enterprises Inc.
: 14329 - 68th Avenue, Surrey, B.C. V3W 2H5
: Canada
:
: 4- Mark Gomez
: 11108 Shoreline Dr.
: El Paso, TX 79936
: USA
:
: 5- Robin Hanson
: PO Box 596
: Virden MB.
: ROM 2CO CANADA

6- Bill Boyer
: 8776 Fern Glen Dr.
: St. Louis, MO 63126
: USA
:
STEP 2: Now take the #1 name off the list that you see above, move the

other names up (6 becomes 5, 5 becomes 4, etc...) and add YOUR Name as

number 6 on
the list. STEP 3: Change anything you need to, but try to keep this article as close
to original as possible. Now, post your amended article to at least 200

newsgroups. (I think there are close to 24,000 groups) All you need is 200, but remember, the more you post,
the more money you make! ---DIRECTIONS -----HOW TO POST TO NEWSGROUPS---------- Step 1) You do not need to re-type this entire

letter to do your own
posting. Simply put your cursor at the beginning of this letter and
drag your cursor to the bottom of this document, and select 'copy' from

the
edit menu. This will copy the entire letter into the computers memory.
Step 2) Open a blank
'notepad' file and place your cursor at the top of the blank page. From

the 'edit' menu select
'paste'. This will paste a copy of the letter into notepad so that you
can add your name to
the list. Step 3) Save your new notepad file as a .txt file. If you
want to do your postings
in different sittings, you'll always have this file to go back to. Step

4) Use Netscape or Internet explorer and try searching for
various newsgroups (on-line forums, message boards, chat sites,
discussions.) Step 5) Visit these
message boards and post this article as a new message by highlighting
the text of this
letter and selecting paste from the edit menu. Fill in the Subject,
this will be the header that
everyone sees as they scroll through the list of postings in a
particular group, click the
post message button. You're done with your first one!
Congratulations...THAT'S IT! All you have to do is jump to different
newsgroupes and post away, after you get the hang of it, it will take
about 30 seconds for each newsgroup!
**REMEMBER, THE MORE NEWSGROUPS YOU POST IN, THE MORE
MONEY YOU WILL MAKE!! BUT YOU HAVE TO POST A MINIMUM OF
200** That's it! You will begin reciving money from around the world
within days! You may eventually wany to rent a P.O.Box due to the large

amount of mail you will receive. If
you wish to stay anonymous, you can invent a name to use, as
long as the postman will deliver it. **JUST MAKE SURE ALL THE
ADDRESSES ARE CORRECT.** Now the WHY part: Out of 200 postings, say I
receive only 5 replies (a very low example). So then I made $5.00 with

my name at #6 on the letter. Now,
each of the 5 persons who just sent me $1.00 make the MINIMUM 200
postings, each with my name at #5 and only 5 persons respond to each of

the original 5, that is
another $25.00 for me, now those 25 each make 200 MINIMUM posts with my

name at #4 and only
5 replies each, I will bring in an additional $125.00! Now, those 125
persons turn around and post the MINIMUM 200
with my name at #3 and only receive 5 replies each, I will make an
additional $626.00! OK, now here is the fun part, each of those 625

persons post a MINIMUM 200
letters with my name at #2 and they each only receive 5 replies, that just made me $3,125.00!!! Those 3,125 persons will all deliver this message to 200 newsgroups with my
name at #1 and if still 5 persons per 200 newsgroups react I will receive $15,625,00! With a original investment of only $6.00! AMAZING! When your name is no longer on the
list, you just take the latest posting in the newsgroups, and send out another $6.00
to names on the list, putting your name at number 6 again. And start posting again. The thing to remember is, do you realize that thousands of people all over the world are joining the internet and reading these

articles everyday, JUST LIKE YOU are now!! So can you afford $6.00 and see if it really works?? I think so... People have said, "what if the plan is played out and no one sends you the money? So what! What are the chances of that happening when there
are tons of new honest users and new honest people who are joining the internet and newsgroups everyday and are willing to give it a try? Estimates are at 20,000 to 50,000
new users, every day, with thousands of those joining the actual internet. Remember, play FAIRLY and HONESTLY and this will work. Also, for the skeptics, you're looking at this and thinking about doing it right? imagine how many millions are looking and thinking the
EXACT same thing!!
: Enjoy the money,
: Rick

Hey, the new test is no better than the old one! But, it reflects the
poor abilities of those we let get in control, and their mental aptitudes
towards being able to construct a meaningful test--krist, it is a wonder
the damn idiots didn't try to stick CW in the damn thing--or the ability
to hum the national anthem, or the ability to read text upside down, or
roller skate, etc, etc...

I suppose it could have been worse... <grin>

Installed a 40 channel Cobra WX ST Radio in my truck, there is so much noise coming thru it that its driving me nuts, Especially with the A/C Blower motor on. I have tried to run it both ways, thru the fuse box and directly to the battery, Did not make a bit of difference.
Purchased a filter from radio shack and tried that, no difference. I believe it is all antenna interference, when I disconnect the antenna at the back the noise drops about 80%.
My question..... Am I experiencing a cheap radio shack cable/antenna? Would I have to run it outside the vehicle then inside or would it be possible to shield the cable with some type of aluminum foil help?

Appreciate any advise

CB-radios usually have 50 Ohms impedance.
But RCA-connectors are not specified.
Also PL-connectors do not have a specified impedance.

I know BNC-connectors having 50 and 75 Ohms impedance.
Below 50Mhz it doesn't make much differenc anyway....

>A weight

Or a faint light in your shed late at night.

>Conversation piece for in the living room or in

>"the john".

Maybe in -your- crib.

>Spare parts!

In case any parts of the other one go bad,,that's an excellent idea..
Highly doubtful, though. Many of the small cheaper mass produced linears
are practically disposable,,,,use them for many years and when they die,
toss them out if the cost goes above 25 bucks to repair. They're cheap
enough.

>A place to hide money!

Why, you could fit your life savings in there, but your coins would get
hot.

> (oh, the money was wasted on that illegal

>linear for a mud-duck radio!)

World-wide mud chicken always gettin' up!

>Collateral to turn over to the FCC in return for

> or 75 ohm?
>
>
Hello, John (perhaps)

The reality is that it isn't the connector, it is the coax. Typically, cb and ham radios these days have a 50 ohm impedance. The connector has nothing to do with it; it is all in the coax. Purchase 50 ohm coax (assuming you will be using the usual vertical).

Should one use a dipole, the impedance is 72 ohms (but varies considerably as can a vertical based upon the ground type/conductivity locally). Would you believe that a vertical over perfect ground (salt water is quite close enough, thank you) exhibits an impedance of only around 36 ohms?

The SWR of a 72 ohm dipole (again, it varies considerably based upon ground and mounting height) fed by that 52 ohm rig is not anywhere severe enough to cause a problem.

Most problems will be caused by poor grounding (especially in a mobile installation), poor solder joints, or lousy coax (such as coax which has been exposed to many summers and winters and expecially if it hasn't been properly prepared for the elements).

Best regards from Rochester, NY
Jim

It's an RCA connector? That's odd. What kind of radio is this?

Must be an old antenna/design? Older CB radios commomly used RCA
connectors. If the older radios worked fine with a 50 ohm line then
you have to assume that your antenna would also work fine with the
RCA connector.

Ask what your local trucker channel is and program it.
Channel 19 is a must. It used to be the emergancy channel in the US.
Lowest channel. It provides the longest QSO distance on CB.
Channel 29, 30 and 31 are widely used for DX-calls in Europe. Ask your
locals.
If you also can transmit have a look for the most quiet channel in your
area for to QSY to.

Greeetings from Germany

_
What some of those looters need is not salvation, but liberation with a
jail sentence or force.
Pound for pound, the Red Cross does way
more than any other non-profit. There's good
and bad with all charities. Asking to see the financial disclosure form
of ANY charity you wish to donate to is a good beginning. If they balk,
hesitate, delay, hee or haw, walk away.

Ok, ok. I stand corrected... :-)
It's 19 years ago when I was in the US...

9 AM is trucker channel in Germany.
Very most other CB is in FM mode.
SSB is becomig more popular now as it became
legel on channel 4 -15 first and now 1-40 one
year ago with 4 Watt PEP over here.

This was on the Hurricane Katrina forum:

K DeStefano - Alton, IL
I am from Diamondhead, MS. I evacuated with my 3 children to my parents home in Alton, IL. I have a finace and his family down there in Diamondhead that rode out the storm. They need help with supplies. They barely made it due to the water coming in the house and they had to flee to the second floor. There are two elderly people with them and 4 teenage kid's and a5 other adults. Please let me know how I would have access to a ham radio operator from here to Miss. my phone in Illinois is 618-466-1392

I got your catalog today man, you guys have a really nice line of gear.

My old lady would have a shit attack if I started buying some of that stuff for my work trucks! I would be relegated to a stall in the barn, again! :p

At any rate, cool stuff. I'm putting a new Jasper long-block in a GMC 2500 4x4 now, then I won't plow anymore snow with that truck. It will last another 3-4 years as my personal slave!

That is the problem I had. After 9-11, they were donated so much money, that
they went out to purchase new computers systems.

I sent $100 to the salvation army, fwiw, I'll send some more soon.

They shouldn't re-build some of that stuff, and I hope none of my donated
money goes to those looting niggers I've seen on TV.

Now Steve, please don't be that way. They have no electricity, food, water
or shelter, but a big screen TV, stereo, DVD player, or some really nice
jewelry can go a long way in helping them survive this crisis. :-(

My view on the looting: If you are stealing food or water, that's fine, and
you are doing what you need to do for survival. If you are stealing
non-essentials, you should be shot on sight.

Exactly right! I would feel bad if I didn't donate some cash to the people
that aren't looting... and unfortunately that's what they show on TV the

most..and it looks like little Africa with trim.

The real victims haven't been counted yet......

The good lord works in mysterious ways tho..that hurricane has brought some much needed rain to the north.

My heart goes out to those folk in the gulf..that's fucked up.

I can forgive the people that stole food, clothes, medicine, etc. But the shit with the toys and TVs is totally bullshit. But saying that, it is a small percentage of the people doing it. Most of these people are shit out of luck. I will donate for them. I will also give to the Salvation Army. Thanks.

Vinnie S.

Hello Stevo:

Yep most ham amps use the RCA Jacks/Plugs for the PTT and AGC inputs.

The guy down the road has a Amertron Amp, uses two 3CX800's and pegs the Bird Wattmeter with a 2500 watt slug on all the bands, driving it with a older Icom.

The PTT is pretty simple, usually the rig supplies a ground for the AMP to key when you key the mic.

The AGC voltage is supplied by the rig, to throttle back the amp and keep it from going open loop nutzoid, and sounding better. Some of the Icom rigs have to had the AGC Voltage turned down a little as the AGC Voltage was way too much, causing the amp to turn off more than it should.

I played with a Icom 746 PRO and it was able thru its digital I.F. processor in the receiver to attenuate stations on USB, while monitoring LSB, allowing the LSB stations to be heard, pretty impressive. Usually I would have to swing the Moonraker 4 or 6 around to attenuate the stations on USB. So the Icom 746 PRO and a good beam will kick A$$.

The 720A and that Collins 30L1 on the Interceptor 10K ought to hum pretty well, breaker breaker.

Here we are in this fine HiTECK society, and with all this great New Trucking radio systems are not worth a shit in a real emergency like in the Big Easy, and the police can not talk anywhere. Car to Car does not work either.
Hell CB would work better or something. All police should have a backup simplex Radio to use if this happens again as at least they could talk if the repeater went down. I bet right now in most areas we live if the main base went out all communications would go to crap..
Sometimes keep it simple really works.
By the way where is all those Ham operators that should help out.

>Sounds like a typical CB trucker to me.

It always makes me laugh how truckers seem to think their
CB is some sort of secure channel and if someone else
breaks in they're first of all surprised then irritated.

Or perhaps they're the True Users of CB and the rest of us
are just grunts who are allowed to use it at their discretion,
who knows.

> By the way where is all those Ham operators that should help out.

Let's see - those who weren't completely wiped out - are probably on the outskirts of the city - in a "Staging" area - waiting to be allowed in. In a disaster - Hams can't just go marching in carte blanche. They are usually assigned to a Fire - Police - EMS unit and at a command post.
I am involved in EMA, so I know of what I speak. The "CBers" could be called in to help as well - with patrols to help watch for crime - as a "Citizen's" patrol - once things are to where that can be done. With little to no power, not much room to set up shop and considering the whole city is being evacuated, no one is setting up shop. Nothing can be done until they get the levee(s) fixed. Problem is, not so much with the "hi tech" it is many agencies "bank" on their comms systems and are closed doored to any outside assistance - including Ham. Maybe after this, eyes will be opened. It sometimes takes disasters to make things be seen for what they truly are. NO radio system is without it's limits. I can tell you, during a local disaster - our fire radio system was swamped. It was Ham (and yes I am one) that got us through. I had placed operators strategically through out my area to give me reports as needed. When an engine rolled, one of our firefighters (a ham) had his 2 meter radio in his pocket. Again, the fire radio was virtually useless with all the traffic. Ham AND CB can and do play a role - if invited.
While I don't have many CBers in my area anymore as before, I do plan to use them too - if ever needed. "I" will not rule out "any" options if it will help get the job done.

Any a-hole stealing something other than food, should be shot.
I still don't understand why all these people didn't pay attention
to the warnings & evacuation order, that alone should be reason
to arrest them for stupidity alone.

Legal power for AM is 1 Watt carrier (wich is 4 Watts maximum on 100%
modulation)
and 4 Watt on FM.

CB-regulations are here, in german of course ;-) :

Living in Birmingham and using the Cb for many years travelling the M6 and M42 i can sympathise entirely with your comments. Due to the decline in CB use many homebase stations have moved to the 19 to hear people as 14 is completely dead. This irritates some truck drivers and the amount of derogitory banter between home bases and truck drivers has to be heard to be believed.
Likewise i can also understand the truck drivers anguish over "numptys" playing music over the 19, dead keying and bucket mouthing. That said some truck drivers i have spoken to over this have actually said they enjoy the banter and it makes an otherwise boring journey memorable. Many have well rehersed and derisory speeches they deliver regularly to the homebase stations or..i might add.. any mobile station who doesnt drive a big wheeler. The poor old tipper truck drivers also get it in the neck as they feel they are inferior truckers.
A point to pick up on is the amount of "Truckers" who chatter on the 19 blocking it for other truck drivers trying to listen to road conditions or give out warnings. Some think they have a right to use the 19 and stay on there as its the mobile channel not realising they are just as bad as the mike keyers and music players as they make the channel nearly unusable for their fellow truckers. Yes 19 is the mobile channel but once you enter in a banter with a fellow trucker the same common courtesy applies of finding a clear channel and continuing the conversation unless the conversation is short and plenty of gap left for other users to get through.
Truck drivers used to be known as the "Knights of the road" but the actions of many of these people seriously belittle this old image.
Im not saying home bases and car drivers are perfect by a long shot but we all have to get along and use the Cb together. As its nowhere near as used as it used to be theres plenty of room for all.

Something that made me laugh a few years ago, i was travelling to Aberystwyth from Brum and was going through the village of Welshpool which is a good few miles into Wales and there were a couple of obviously welsh people chatting on the 19. The channel other than them was completely clear and all of a sudden a truck driver piped in saying "clear the 19 you dummy brummies".. eh i thought... Brummies is a term used for Birmingham people but all he knew it as was an insult... i dont think he even knew what "brummies" meant. One other time i was talking to a truck driver who had spent 6 months out of work as he was trying to find a different job. He said he couldnt find one and would more than likely have to go back to trucking..... says it all really.
Eddie Stobart Rocks ;o)

Yep as far as I'm concerned they did that now all bets are off.

Let the gators, water moccisons and Uncle Chuck have them.

They knew the storm was coming and it killed 10 people in
Floeida...HELLO! What further clues do you need that its going to fuck
you up. Jesus H. Christ the fucking storm was covering HALF THE GOD
DAMNED GULF OF MEXICO!

As far as I'm concered you can all get cholera and shit yourselves to
death.

> >
>
> No j'aint. 19 never was no emergency channel.

19 is the mobile calling channel. Just because truckers use it it doesnt make it the trucking channel although many people think it is. Theres lots of car drivers on CB

> That is the trucker channel.
>
> 9 is the emergency channel.

Absolutely, same in the UK although our channel 9 is a different frequency from your channel 9 its still referred to as the emergency channel although unless you were a bit of a pauper youd use your mobile in an emergency not a CB.

On a more serious note heartfelt sympathies to all people affected by the tragedy in New Orleans. In this day and age you really dont expect for things to deteriorate like they have in a democratic and humain society. The stories we have heard makes you think of a third world country not the most powerful nation on earth. Were all thinking of you...

Dead keyers and wanna be pirate radio DJs piss everyone off , not just
the truckers. In the area I live we don't even use 19 as a call out
anymore
as its a complete dead loss what with the afformentioned idiots all
over
it.

> Truck drivers used to be known as the "Knights of the road" but the actions

Not sure anyone believed it anyway. Anyone whos been in a queue of
traffic
on a dual carriageway behind 2 idiot truckers playing the
lets-overtake-going
uphill-at-1-mph-difference-and-cause-a-half-mile-tailback game knows
what
prize dimwits these guys can really be.

Tennessee Titans quarterback Steve McNair teamed with Green Bay Packers quarterback Brett Favre and arranged to fill a tractor-trailer with relief supplies bound for Mississippi. McNair also asked his fans to help him raise money for victims of Hurricane Katrina. McNair, who has a home near Favre's in Hattiesburg, Miss., is offering to swap an autographed photo for each minimum donation of $100 to his foundation.

From the Chicago Sun-Times:

http://www.suntimes.com/output/feder/cst-fin-feder01.html

On [Dahl's] (105.9) afternoon show Tuesday, he mused about creating a drink inspired by
reports of "floating corpses" in New Orleans. And on his Web log Wednesday, he elaborated.

"Okay, so maybe now I feel a little guilty that I wanted to see New Orleans completely
covered in water," Dahl wrote. "You have to admit, though, that the helicopter rescues
and the looting make for some interesting TV. I guess I understand the looting for food
and water. If I were flooded out of my home, I think I would crave a 32-ounce bottle of
Dasani water and a can of SpaghettiOs myself. But trying on clothes while standing knee
deep in floodwater? That seems a bit much. I'm still waiting on the floating corpses.

"To that end, I have sent away for five pounds of Chocolate Babies to act as 'floaters' in
the new drink I'll be inventing this week: The Floating Corpse. ... I'm thinking Creme de
Cacao, Kahlua, some rum, maybe a little cream and a floating Chocolate Baby.

"Of course, I'll fine tune that and come up with a 'secret ingredient' or two, but that's the
general cocktail framework that I'm thinking of presently. Sort of a Mudslide, without the
mud. More of a Muddy Waters.

"Also, just for the record, the Chocolate Baby thing is not meant to be racist in any way.
Yes, there have been a lot of African Americans on TV being rescued and the like, but they
don't make anything other than Chocolate Babies or Licorice Babies, and it seemed to me
that chocolate was less offensive. It's a judgment call. If they made Strawberry Babies, I
would have ordered five pounds of them too."

I nearly peed myself folks.... ;)

Are you done thumping your pud in public? You're as bad as the
bastard Bush. When Diane Sawyer asked about people who were taking
only food, diapers, etc, the monster had to interrupt her to blow out
his oh-so-stallionlike "zero tolerance" Texas bullshit. I thought he
was going to stand =up and come in her lap.

This is the same hypocrite who signed a law while governor
requiring severe penalties for minors caught drinking. But after he
stole the presidency, his drunken slut of a daughter gets off with
"community service" when nabbed. The service she should have done was
being turned out while tied low on the hitching post.

Your right,
we should have Al Gore in there. Then all would be well. If Al Gore was president there would not have even been a Katrina. (Bush policies led to the warm gulf waters)
Bush with Mr. Dick caused Katrina to create a fuel shortage so they could drill off shore and in Alaska.
And it is all because a bunch of pricks would not listen to CNN and vote for Al Gore. They were able to steal the white house. If only the Democrats could take our country back and save us.

>president there would not have even been a

>Katrina.

If Gore was in, he damn sure wouldn't have done what Bush did. Bush stymied and denied the monies the Army Corp of Engineers were asking for flood control in New Orleans concerning the river, levee and Lake Pontchartrain* (*"New Orleans CityBusiness", Feb. 16, 2004).

> (Bush policies led to the warm gulf waters)

Unlikely, but the hot air and outright lies and bullshit emanating from his, Cheney's and Rumsfelds's mouths might have something to do with it. Then again, it could be sheople like you who can only cheer Bush and are completely unable and incapable to debate the actual Bush record and issues. As a result, you invoke, as obfuscation, other, irrelevant parties. It's classic abdication of blame.

>Bush with Mr. Dick caused Katrina to create a

>fuel shortage so they could drill off shore and

>in Alaska.

There is no fuel shortage and never was. It's management and delivery manipulation. Here's something you can have fun with,,,go to a number of the gas stations that are price gouging and who have "sold out" signs on the regular unleaded with a plastic bag over the handle. Pick up the handle, tear off the bag, and dispense your fuel. Many stations are covering up their regular unleaded for various reasons,,,one is to command a higher price for the higher octane, the other is to save some gas "just in case" the mass panic wave ("there's no gas".."there's a gas shortage") that you have succumbed to, turns out to be self-prophesizing.

>And it is all because a bunch of pricks would

>not listen to CNN and vote for Al Gore.

Just like a low life,,,,don't take personal responsibility for anything, especially where Bush is at fault. Look, I know it pains you, but the repubs have been in office for over 5 years, the demos have controlled nothing, not the house, not the senate, not the wh. Keep blaming others all your life. Eventually, you should wake up and realize that everybody isn't against you and it's not everybody elses fault for the condition you find yourself.

> They were able to steal the white house. If

>only the Democrats could take our country

>back and save us.

Typical. But Bush fucked this country. I hope gas goes to 6 bucks a gallon. You deserve every bit of this.

>Yes the "Blame Bush" liberals are having a hayday. Idiots.

They had known for -DECADES- just how much damage such a hurricane
would cause if it hit the area. Katrina was a -CAT 5- for at least two
days -BEFORE- it hit land. New Orleans was in it's projected path ever
since it passed over Florida. They had -MORE- than enough time to
prepare for the worst case scenario, and they -KNEW- what that
scenario might be.

Bush could have had troops and aid ready to respond as soon as the
wind stopped. Even as the situation deteriorated after the storm, he
had, and -STILL- has, plenty of resources at his disposal. There are
at least six undamaged military bases within flight range of the CH-53
and CH-46 helicoptors, and CH-53E's can be refueled in flight. So
RIGHT NOW there could be a whole -ARMADA- of choppers dropping
supplies and troops and evacuating the people. Camp Lejeune has
hundreds of amtraks (amphipious vehicles) that the Navy could ship to
the coast within 2-3 days, so right now there could be plenty of help
-ON THE GROUND-. He could put a price freeze on the price of gas and
diesel, or at least make a strong declaration against price gouging
and other corporate looting. Since the disaster area covers more than
one state he could declare martial law and secure the area. All these
things have been done by presidents in the past for other disasters.
Bush has done none of these things.

So what -is- he doing? Well, he's raking in some pretty good profits
from the higher gas prices. And he's begging the public for donations.
Meanwhile, Congress is moving on an aid package that amounts to the
money that is spent on Iraq for an entire week, and Koffi has pledged
to offer international aid (what a disgrace). And now Bush wants to
land there, tying up desperately needed resources for his visit, and
make another glory-speech on a pile of rubble.

Bush is the idiot.

It's a group of white racist, in black face, with ghetto clothing on,
doing the shooting. Saw it on the news today.

3175. Re: OT Best venue for Katrina donations

Newsgroup: rec.radio.cb
Date: 2005-09-03 01:50:28 UTC
From: Chuckie Brash <b@alltel.net>
Message-ID: <58192$4318f332$d8602720$9461@ALLTEL.NET>
Source record: 204006

The Red Cross is okay if you don't mind helping to finance new office buildings and 300-500 thousand dollar salaries for the top exec's. Not to mention their continuing support for communist tyrants around the world. Salvation Army personnel generally live a meager lifestyle in order to help others.

>>NEW FCC/ARRL AMATEUR RADIO LICENSE EXAM

>You need to be able to send and receive one letter of morse code per
>hour too!

You think that's funny?

Many, many (many) years ago (we had dinosaurs for pets when I was a
kid), after a few years on CW, ragchewing at anything up to about 30
wpm, I enlisted in the US Navy. Part of the tests at boot camp was
what they called a Morse code receiving test. I'd guess that the code
was slower than 1 wpm. Much slower. All Es, Ts, Is and Ms. All I
could copy were E and T - by the time the next element came along, I
had forgotten the previous one, so I had to write down each element
and count the space lengths.

Morse isn't meant to be copied element by element, any more than words
are meant to be heard letter by letter. If people spelled everything,
most people wouldn't be able to carry on a conversation.

3177. FREE CB CRYSTAL MIXING CHARTS

Newsgroup: rec.radio.cb
Date: 2005-09-03 04:34:38 UTC
From: Lou Franklin <lou@cbcintl.com>
Message-ID: <su9ih11v1fa6c3bb6ss4essmgi59r9e49g@4ax.com>
Source record: 204014

We've now added all our crystal charts for free download/printing
(PDF) on our site. These 36 charts cover about 95% of all American
mobile & base CB models, and show exactly which crystal(s) affects
which mode or channel. Very useful for troubleshooting "dead
channels" symptom, or for modification to 10M or other freqs.

Check 'em out and print them at: www.cbcintl.com/xtals/xtals.htm

We specialize in CB books, plans, kits, and high-performance CB
accessories. Please visit our Web site to see all those "goodies" you
just can't find anywhere else!

www.cbcintl.com

You can also download our complete CB catalog, or just the Order Form
from that page. We've also got a new Email Order Form (for VISA/MC)
if you're in a hurry.

SAVE MONEY! We regularly run EBAY auctions in which you can save up to
HALF the cost of our most popular CB books and accessories. To see
what's currently on sale, double-click the line below:

3178. CB REPAIR & MODIFICATION BOOKS AT 40% OFF

Newsgroup: rec.radio.cb
Date: 2005-09-03 04:34:42 UTC
From: Lou Franklin <lou@cbcintl.com>
Message-ID: <1v9ih19hsl80mljarbj9asfpeujcqb06ji@4ax.com>
Source record: 204015

To learn the technical TRUTH about CB Radio without all the hype from people who are just plain ignorant, check out the following books from CBC International. They're selling right now at a big discounts on our EBAY & AMAZON stores too.

Check it out!

To see exactly what these books look like, plus all the specific, chapter-by-chapter details, see our Web at:

www.cbcintl.com

Some of the books included are:

BOOK #1: THE "SCREWDRIVER EXPERT'S" GUIDE To Peaking Out & Repairing CB Radios. List $25. The most popular "big dummy's" guide ever published on do-it-yourself CB repairs & modifications. Covers peaking of receivers, transmitters, modulation, mike problems, antenna & SWR problems, detailed frequency modifications for both crystal & PLL radios. Loaded with charts, illustrations, and specific instructions for most brands including the new export models. This latest edition also covers slider and broadbanding tricks, FM conversions, and much more!

BOOK #2: THE CB PLL DATA BOOK. List $20. The only complete reference source on CB PLL synthesizer circuits ever published! Detailed PLL theory explained in layman's terms. How they work, and how to modify them for many more channels. Includes specific PLL block mixing diagrams, truth charts, & IC pin function diagrams for nearly every PLL chip ever used. Covers all the most popular U.S. & export chassis, with specific listings of all models using the chip.

BOOK #3: UNDERSTANDING & REPAIRING CB RADIOS. List $42. Giant 370-page technical book for the professional repairman. Picks up where the "SCREWDRIVER EXPERT'S" GUIDE leaves off. Includes circuit descriptions & troubleshooting guide for 23- & 40-Ch., crystal & PLL, solid-state & tube, AM, FM, SSB, CW, American & export models. Covers test equipment (& where to find it), transistor basics, synthesizers, receivers, transmitters, power supplies, T/R switching, antennas, interference, parts & accessory sources. Over 350 illustrations including schematics, charts, and photos. Huge subject index also lets you look up repairs by symptoms. This is "must" reading for any serious CB technician!

For details on our Galaxy-Ranger Service Manual (2nd Ed.) go to:

www.cbcintl.com/galaxy.htm

3181. FREE! "THE CB EPROM DATA BOOK" OF FREQ. MODS

Newsgroup: rec.radio.cb
Date: 2005-09-03 04:34:55 UTC
From: Lou Franklin <lou@cbcintl.com>
Message-ID: <cv9ih11326f973icanlll3s1oc20na1uld@4ax.com>
Source record: 204018

FREE!!

For advanced techs and serious radio hobbyists, we're now offering a FREE copy of our previously published "CB EPROM DATA BOOK" by Martin Pickering. (EPROM = Erasable Programmable Read Only Memory.) We sold it for many years but it's now out of print. This little manual of 60 illustrated pages is an absolute GEM of CB technical knowledge you'll just never find anywhere else. And it's yours for FREE from our Web site.

This book reveals the secrets of advanced channel programming, and picks up where our "CB PLL DATA BOOK" (www.cbcintl.com/pllbook.htm) leaves off. You'll get a thorough background in how these amazing programmable chips can be used to modify many popular CB PLL circuits for expanded frequency coverage. Covers the basic programming techniques, and even includes real PC board artwork for making EPROM circuits. Sample artwork includes EPROM boards for the popular MB8719, PLL02A, ï¿½PD2824, and ï¿½PD858 PLL circuits.

Best of all, the price is right--namely, FREE! Download your FREE copy of "THE CB EPROM DATA BOOK" (948 KB Adobe PDF) at:

www.cbcintl.com/docs/EpromBook.htm

Don't forget to check out all our other CB specialty books, plans, kits, & high-performance accessories at:

www.cbcintl.com

SAVE MONEY! We regularly run EBAY auctions in which you can save up to HALF the cost of our most popular CB books and accessories. To see what's currently on sale, double-click the line below:

Hello, Twist

The reinforcements are lacking as half of the Nationl Guard is currently in Iraq. I doubt they/ve found the weapons of mass destruction, but they are not capable of helping here when they are over there ....

Yes I am sorry to hear that bad news, why on earth do they have to shoot at help thats trying to come there way. What is the logic behind that ?

I hear on Sky news that the National Guard has been sent in, good. The ones that are raping should be shot no question, get rid of the scum that do that, Hurricane or not raping is NO excuse.

Black or white it dont matter raping is the lowest form of human behaviour, next to canabilism.

While you guys in the USA are thinking about petrol soon to be $6 a gallon
have a thought for us poor brits..
I just paid ?1 a litre today. Taking into account theres nigh on 4.5 litres
in a gallon..

```
4.50 GBP
United Kingdom Pounds = 8.28851 USD
United States Dollars
1 GBP = 1.84189 USD 1 USD = 0.542920 GBP

That makes our fuel at $8.29 now... not in the future :o(

Bet that makes you feel better...lol
```

3194. Hamfest bums on e-bay profiteering on Katrina ?

I can't believe how many scumbags there
are profiteering off of Katrina on e-Bay
right now !!

Alot of them say that some of the proceeds will
go to Disaster relief when everyone knows these
fat smelly opportunistic bastards won't send one single
dime in to any charity anytime or anywhere and will
just pocket the proceeds and walk away laughing.

I knew these gypsy dealers we all used to see at the hamfests
each and every year were lowlifes and scumbags, but this really
takes the cake and the silverware! What a bunch of cheap ass
lying bastadts !!!!

(Wonder how may of em are pulling the same crap on the
many other swap-and-shop boards?? Not all hams do this
of course but the ones who are really stink like shi+ - disgusted.)

Are you "sure" about that? Somewhere in the news I heard that E-Bay was
setting up a program where the proceeds from sales could be sent directly to
them to be put toward the relief effort! Maybe the sales of these items ARE
for this purpose. "I" could be wrong but that is a possibility.

I would say that his relatives would have to get the message out
themselves. It sounds like you know they survived already...
If they had a CB radio and battery power other CB'ers would
relay messages, radio conditions favoring. Ham radio in the
right band would be the same. Even little FRS family radio
service "walkie talkies" with a supply of batteries would
be worth a try, or how about a handmade or otherwise booster
antenna on a cellphone?

These are ways, but you have to be prepared in advance,
and survive the storm, and you have to want to communicate,
maybie theres no practical gain at this point than a quicker
rescue. Maybie the best thing is to leave the radio and
start hiking...

I haven't heard much on the CB since the disaster, Conditions
have been quiet in the NE US.

BE CAREFUL!!! AND BE AWARE OF PEOPLE AROUND YOU!!

The Hurricane and Dangerous People on Your Streets

Hello Everyone,

New Orleans is toast. It's the biggest natural disaster in an urban area in American history.

It came to my attention that you and I may have a bunch of dangerous people in our towns and on our streets. South Louisiana has 1.4 million people from New Orleans scattered around here. Some are being bused to Houston.

The 100,000 + people that stayed in New Orleans are being "rescued" and turned loose along Interstate 10.

Looting is going on all over New Orleans. The "brothers" are out of control. A lot of these people are the lowest of the low.

Former governor Mike Foster, in the past, has called New Orleans a third world jungle.

Former governor Edwin Edwards threatened many times to send in the National Guard to take over control of the city from it's mayor, DA, and police chief.

They are possibly headed into your town.

They have no money, no drugs, no "pimp-mobiles" to low-ride in, no new Nike's, etc.

Last night some masked men broke into a Lafayette home, killed the man of the house and forced the wife to open the family safe. They pocketed the families life savings and left. (This incident has not been verified.)

I was out and about town today. I saw some scary looking people driving on the streets and in some of the stores I was in. Some of the lowest of the low.

This is a good time to be alert and watch what you're doing and where you are.

Alert your wife and kids.

No night-time shopping for a while.

No night-time bar hopping for a while.

Get in the habit of locking your house doors in the daytime.

Keep car doors locked.

Stay out of the crummy parts of town. No excuse to be there.

All the other common sense safety rules.

Finally.....if you don't have a gun, get one. You might need it.

Now would be a great time for Bush to make a executive order to suspend all federal fuel tax and start drilling off shore here in Ca and start in Alaska.
This would really help stop this crazy ness.
The answer Cleary is supply side. This is America fuel should and could be under 1.00 a gallon if we can get the politicians out of it.

Before you blow a gasket, check to see if any listing in question has a
little blue ribbon by it. Per Ebay, (http://givingworks.ebay.com/)
there is a valid contribution campaign available.

Im not sure when it was, maybe mid to late 70's we brits were happy with our new north sea oil find and everything was going to be cheaper and things would be rosy... i dont know what happened there but the prices never went down.. only up... and up..... and up. Most of our charge as with probably a lot of yours is the government taking a whopping huge chunk in VAT. What is this sh*t with VAT anyway... we pay it when we earn it.. we pay it when we need to buy something with it... we pay some when we try to save it and when you sell something you no longer need your expected to declair it and pay it again. Then if you die...and so on and so on.... theiving b*&terds have always got their hands in your pockets :o(

Why is it typical bigot shit if its true? Are you one of these Do Gooders who stick up for the scumbag brigade. Wait until your daughter or mother (or even you) gets raped or beaten shitless for a mobile phone or a few quid. Well see how quick you are to defend them then.
There was a survey done in the UK about rape, the facts were 80% of rape were by Afro Carribeans, 10% Asian and 10% white. Now...why do you think that may be?? Whenever these animals protest about something theres a riot, they set cars on fire, attack the police, loot buildings and set upon anyone who isnt like them, and in a few cases rape women.
If im rasist for saying this then so f*$king what. You get 20 times more rasism from them and whereas if they complain you get done, if we complain nothing happens... open your eyes. We live in a country of supposedly free speech so isnt it our right... or does that only apply if your black?

What happened in the UK was we had people trying to sell their live8 tickets
on eBay and make large profit where they were given free. Some clever?
people made up new id's and bid these scumbag auctions right up to the
limit. In the end eBay had to relent and ban these adverts.
Im not saying its right or either am i advocating this.. its just what
happened over here.

I agree the US has a lot of gas guzzling vehicals but UK has a fair few too. That said, theres no reason why you guys couldnt use more economical cars. Personally i drive a Ford Granada 2.5 scorpio turbo and wouldnt feel safe in anything smaller, at least theres some metal around you to protect you in an average collision. Theres some pretty big 4x4's about too. That said our prices have gone up and up with the pretence of "cutting back on emissions to save the environment" then they go to war and put tons more pollutants in the air.... and blow thousands of people to smithereens... Absolutely bonkers

Well well, such a cowardly statement from some nigger loving cocksucker who decides to change his news id to hide who he is.... Im not hiding anywhere Nigger lover.... so your allowed to say what you think and im not eh..... you have to use capitols too because your a bigmouthed coon lover.
Ive got love in my heart for anyone whos descent, i feel sorry for those who have died or lost their properties and livelihoods but that makes it ok for some to kill, loot and rape does it???
You have love in your heart for murdering raping scumbags.... well thats fine, you can have them all living next to you...

Now you slovernly sack of shit you can tell me what i lied about and what deceit i said... Niggers are worthless sacks of shit. Even black rappers diss other black brothers who are worthless by calling them niggers.... niggers is a derisery term for worthless blacks... its not a term for all blacks... anyhow i dont have to defend my opinion to you.... go shovel some graves for the dead if your that upset

Ha Ha Ha Ha .,.........

Support for National Public Radio is brought to you by niggers, faggots, liberals & jews

By the way you dumb liberal idiot the joy in my life and love in my heart is being destroyed by the niggers in my neighborhood,
the liberals telling me that faggots and dykes can marry !?!?!

If I could go back in time I would vote for Hitler!

This experiment of equality for all non White races is continuously being proven to be a big mistake.

It has been and will always be the White race that builds real and meaningful institutions.

And no, I do not want my tax dollars being spent on a bunch of starving & dying, dumb screaming niggers in New Orleans - I do not care what happens to them.

Who cares about the cess pit of New Orleans anyways! It is a filthy, vile place - worthless to the moral value of this country.

Despite the encroachment of the 'garbage' races we still have time to reclaim and realign our country.

Back to your isolation from reality you faggot liberal! Prepare to meet your end!

Things don't seem to be all the different do they. We are plagued with same type of lack of leadership here as well and hence the same problems arise. I never agreed with the "cutting back on emissions to save the environment" That's just more garbage.
Personally I buy the size I need in a vehicle and the nicest I am willing to pay for.
I don't own any thing with status attached to it. But that's just me. We all spend our money on what has value to us and I am no different.
Government is so big here that I am not sure things could ever go back to common sense.
In the mean time we just buy fuel with our debit cards. That way it does not hurt so bad. Was that planned ?
Best regards, Dan

TIA Daily -- September 2, 2005
>
> By Robert Tracinski
>
> It has taken four long days for state and federal officials to figure
> out how to deal with the disaster in New Orleans. I can't blame them,
> because it has also taken me four long days to figure out what is going
> on there. The reason is that the events there make no sense if you think
> that we are confronting a natural disaster.
>
> If this is just a natural disaster, the response for public officials is
> obvious: you bring in food, water, and doctors; you send transportation
> to evacuate refugees to temporary shelters; you send engineers to stop
> the flooding and rebuild the city's infrastructure. For journalists,
> natural disasters also have a familiar pattern: the heroism of ordinary
> people pulling together to survive; the hard work and dedication of
> doctors, nurses, and rescue workers; the steps being taken to clean up
> and rebuild.
>
> Public officials did not expect that the first thing they would have to
> do is to send thousands of armed troops in armored vehicle, as if they
> are suppressing an enemy insurgency. And journalists--myself
> included--did not expect that the story would not be about rain, wind,
> and flooding, but about rape, murder, and looting.
>
> But this is not a natural disaster. It is a man-made disaster.
>
> The man-made disaster is not an inadequate or incompetent response by
> federal relief agencies, and it was not directly caused by Hurricane
> Katrina. This is where just about every newspaper and television channel
> has gotten the story wrong.
>
> The man-made disaster we are now witnessing in New Orleans did not
> happen over the past four days. It happened over the past four decades.
> Hurricane Katrina merely exposed it to public view.
>
> The man-made disaster is the welfare state.
>
> For the past few days, I have found the news from New Orleans to be
> confusing. People were not behaving as you would expect them to behave
> in an emergency--indeed; they were not behaving as they have behaved in
> other emergencies. That is what has shocked so many people: they have
> been saying that this is not what we expect from America. In fact, it is
> not even what we expect from a Third World country.

> When confronted with a disaster, people usually rise to the occasion.
> They work together to rescue people in danger, and they spontaneously
> organize to keep order and solve problems. This is especially true in
> America. We are an enterprising people, used to relying on our own
> initiative rather than waiting around for the government to take care of
> us. I have seen this a hundred times, in small examples (a small town
> whose main traffic light had gone out, causing ordinary citizens to get
> out of their cars and serve as impromptu traffic cops, directing cars
> through the intersection) and large ones (the spontaneous response of
> New Yorkers to September 11).
> So what explains the chaos in New Orleans?
>
> To give you an idea of the magnitude of what is going on, here is a
> description from a Washington Times story:
> "Storm victims are raped and beaten; fights erupt with flying fists,
> knives and guns; fires are breaking out; corpses litter the streets; and
> police and rescue helicopters are repeatedly fired on.
> "The plea from Mayor C. Ray Nagin came even as National Guardsmen poured
> in to restore order and stop the looting, carjackings and gunfire....
> "Last night, Gov. Kathleen Babineaux Blanco said 300 Iraq-hardened
> Arkansas National Guard members were inside New Orleans with
> shoot-to-kill orders.
> "'These troops are...under my orders to restore order in the streets,"
> she said. "They have M-16s, and they are locked and loaded. These troops
> know how to shoot and kill and they are more than willing to do so if
> necessary and I expect they will."
> The reference to Iraq is eerie. The photo that accompanies this article
> shows National Guard troops, with rifles and armored vests, riding on an
> armored vehicle through trash-strewn streets lined by a rabble of
> squalid, listless people, one of whom appears to be yelling at them. It
> looks exactly like a scene from Sadr City in Baghdad.
>
> What explains bands of thugs using a natural disaster as an excuse for
> an orgy of looting, armed robbery, and rape? What causes unruly mobs to
> storm the very buses that have arrived to evacuate them, causing the
> drivers to drive away, frightened for their lives? What causes people to
> attack the doctors trying to treat patients at the Super Dome?
>
> Why are people responding to natural destruction by causing further
> destruction? Why are they attacking the people who are trying to help
> them?
>
> My wife, Sherri, figured it out first, and she figured it out on a
> sense-of-life level. While watching the coverage last night on Fox News
> Channel, she told me that she was getting a familiar feeling. She
> studied architecture at the Illinois Institute of Chicago, which is
> located in the South Side of Chicago just blocks away from the Robert
> Taylor Homes, one of the largest high-rise public housing projects in
> America. "The projects," as they were known, were infamous for
> uncontrollable crime and irremediable squalor. (They have since,

> mercifully, been demolished.)
>
> What Sherri was getting from last night's television coverage was a
> whiff of the sense of life of "the projects." Then the "crawl"--the
> informational phrases flashed at the bottom of the screen on most news
> channels--gave some vital statistics to confirm this sense: 75% of the
> residents of New Orleans had already evacuated before the hurricane, and
> of the 300,000 or so who remained, a large number were from the city's
> public housing projects. Jack Wakeland then gave me an additional,
> crucial fact: early reports from CNN and Fox indicated that the city had
> no plan for evacuating all of the prisoners in the city's jails--so they
> just let many of them loose. There is no doubt a significant overlap
> between these two populations--that is, a large number of people in the
> jails used to live in the housing projects, and vice versa.
>
> There were many decent, innocent people trapped in New Orleans when the
> deluge hit--but they were trapped alongside large numbers of people from
> two groups: criminals--and wards of the welfare state, people selected,
> over decades, for their lack of initiative and self-induced
> helplessness. The welfare wards were a mass of sheep--on whom the
> incompetent administration of New Orleans unleashed a pack of wolves.
>
> All of this is related, incidentally, to the apparent incompetence of
> the city government, which failed to plan for a total evacuation of the
> city, despite the knowledge that this might be necessary. But in a city
> corrupted by the welfare state, the job of city officials is to ensure
> the flow of handouts to welfare recipients and patronage to political
> supporters--not to ensure a lawful, orderly evacuation in case of
> emergency.
>
> No one has really reported this story, as far as I can tell. In fact,
> some are already actively distorting it, blaming President Bush, for
> example, for failing to personally ensure that the Mayor of New Orleans
> had drafted an adequate evacuation plan. The worst example is an
> execrable piece from the Toronto Globe and Mail, by a supercilious
> Canadian who blames the chaos on American "individualism." But the truth
> is precisely the opposite: the chaos was caused by a system that was the
> exact opposite of individualism.
>
> What Hurricane Katrina exposed was the psychological consequences of the
> welfare state. What we consider "normal" behavior in an emergency is
> behavior that is normal for people who have values and take the
> responsibility to pursue and protect them. People with values respond to
> a disaster by fighting against it and doing whatever it takes to
> overcome the difficulties they face. They don't sit around and complain
> that the government hasn't taken care of them. They don't use the chaos
> of a disaster as an opportunity to prey on their fellow men.
>
> But what about criminals and welfare parasites? Do they worry about
> saving their houses and property? They don't, because they don't own

> anything. Do they worry about what is going to happen to their
> businesses or how they are going to make a living? They never worried
> about those things before. Do they worry about crime and looting? But
> living off of stolen wealth is a way of life for them.
>
> The welfare state--and the brutish, uncivilized mentality it sustains
> and encourages--is the man-made disaster that explains the moral
> ugliness that has swamped New Orleans. And that is the story that no one

Because it's raw prejudice. Watch the TV and you'll see that
many black people are pitching in to do for their neighbors what the
government isn't doing.

Of course you limey bastards have to treat any foreigners like
shit, then wonder why it blows up in your fucking pasty faces.

YOU are the racist, here. You say nothing about blacks raping
and shooting at their rescuers as soon as the winds died down in New
Orleans, but you claim that we White people are not allowed to observe
that fact, due solely to the color of our skin.

Why don't you open your home to some of those poor raping and
shooting blacks that you're making excuses for?

Racism sucks. Especially when it comes from racists like you
who's ploy is to call everyone else racist, in a thinly veiled attempt
to keep others from looking at your own blatant racism.

The race hustlers have worn the race card completely out.
People are tired of being blamed because others refuse to take
personal responsibility. How did we White people make blacks rape
women in the Superdome?

Observing reality is NOT racism. Trying to hide reality, and
trying to keep people from discussing it, IS.

Are you sure it is an RCA jack? Most CB transceivers used SO-238
chasis connectors. These are commonly known as UHF connectors or
military connectors. They rated for 50 Ohm but are not guaranteed a
constant impedance like N connectors ad SMA connectors.

RCA connectors are in the range of 35 to 50 Ohms. RCA are not well
designed for large amounts of RF. BNC are designed for 50 and 75 Ohm
impedance.

Dan

I would not hold y our breath in hopes of seeing under $1 per gallon
gas here in the US. Those days are long gone. Besides there is and has
been insufficient oil resereves in the ground for the US. US usage of
oil and oil products is so massive that we are forced to import either
crude oil or refined oil products.

Even if you pump the coast of California, Florida and Alaska, There is
not enough oil in those fields to make the US self suffiecient beyound
about 2020. After that the US oil reserves will be down to about 1 to
3 million barrels per day. 2002 projections are the US has about 32
billion barrels of proven reserves. Estimates that these reserves
could grow 73 billion barrles and there is estimates of 83 billion
barrels undiscovered. We are useing about 17 billion barrels of oil
per yr and expected to grow to 25 billion barrels by the end of 2025.

We can not drill enough oil to keep the US self sufficient for not
more than 8 to 10 yrs. After that we will have to buy 100% of our
refined oil products abroad. Tapping our reserves is only going to
prolong the inevitable. So as long as the US wants to buy $1 per
gallon gas and thinks it can for ever are just fooling themselfs.
Figure about 2020 time frame paying closer $20 per gallon, if not
sooner.

So you support niggers who kill and rape, mug and eat corpses do you, and shoot at people who are there to try to bring sanity and rescue to the people of NO.... you sound a very sensible and well balanced person. We would remove these scum from society but its do gooding half whit tits like you that scream for the "rights" of scum like these but would shit a brick if you had to live next to them. As for inbred, were only inbred because of wan$&#65533;rs like you inviting all the worlds scum to live with us..... Enoch Powell said in the late 60's in the UK that the influx of blacks and asians would bring rivers of blood to our streets.... he was branded a screaming rascist of his time but his words are coming true.
I personally dont want to live in a neighbourhood filled with loads of blacks and asians and peurto ricans etc etc... dont i have the right to live with who i want or do i have to live with these people because the likes of you say so....
Every single place in the world where these people congrigate and take over become a "Toilet" of rape,murder,crime and filthy squalour. They hant a clue how to co-exsist in a civilised society so why the F+*k should we put our lives and the lives of our familys at risk because you, and your sort say we have to.... SH*T on you PAL.

Pasty faces?? Were all colours in the UK you halfwit. We dont treat any foriegners like shit, we just treat the shit ones like shit. The Chinese intrigated with us fine because unlike inbred niggers they are civilised and made an effort. They didnt come to the UK with a fucking huge chip on their shoulders...
If it was "for the likes of me" these scumsuckers wouldnt be in the UK so how would it blow up in our faces..now go shag your nigger wife and get over it.

Exactly...and of course you will be branded a screaming rascist for saying
so... Its so easy to blame the government and so on for these "race"
problems but if everyone of these black hoodlums actually decided to help
each other out in a true christian nature then half the problems wouldnt be
there. What the hell possible excuse would they have for raping women and
children and shooting at rescuers.... there is no reason other than thats
how they want to behave.... worthless scum the lot of them....

Im not sure what it would be called in the US. It is 11 years old though so probably a rust bucket ;o). What i will do if your interested is stick a few pics on my website and post a link on here so you can have a look and see if it looks like anything the US has or had then you can let me know...

Even more bullshit. Get the Bushies out of the equation and start forcing
the "speculators" out and prices would settle where they should be, IMO,
somewhere around 2 to 2.50 a gal.

Do you know, that was the most "apt" and "reasonable" piece i have read about the situation down in NO. I know there are some poor hapless people who had no means to evacuate the city when the warnings came and some probably just didnt believe it was going to be as severe as it was but my god, do these people need to have everything spelled out in black and white to warn them whats going to happen and need to be shown the best course of action. The intelligent people got out. The "criminal" element could have stolen cars and quite easily driven their familys out of danger.

The way a civilised society pulls together as you explained is true and cant be blamed on anything else to pass the buck. Civilised people in times of crisis pull together and help out anyone no matter what their race or creed. There is absolutely NO JUSTIFICATION for the terrible things that are happening to people in NO. A terrible situation made 100 times worse by the scumbag criminal element and the apathy of some people who expect everything to be done for them.

One thing suprises me though. Why was New Orleans built on land that was under sea level?? Did no-one stop to think maybe it wasnt the best place to build a sprawling city... The size the USA is surely there were much more sensible places to build on. The land could have possibly been used for farming or the like, where a natural"ish" disaster like this wouldnt have had the devistating effect it has.. maybe theres a reason im not aware of but would love to know the reason why...

Still as they say, hindsight is a very handy tool

Predudice is alive in every country in every creed. Please dont blame it as
a "White" trait. Everyone who is true to their heart and belief would
support their own people before others, whether it be black, white, asian,
indian or pink with blue spots. Most people who would disagree with this are
basically Liars....

Sounds about right.. We pay a boatload more in a lot of things but i guess its just the way it is. House prices can be the worst. You wouldnt believe some of the "crap" some people are buying that costs over £150K ($276,461). The average house is around £200K ($368,619) and anything half decent would be £250K ($460,773) and over except in London where you would have trouble buying a small flat for that with no land at all... I wouldnt mind emigrating to the US but i see that as a dream rather than a reality...

Ok, lets go.

'Normal' fuel with 91 oktane is about 1,43 EURO per litre in Germany.
This is 5.43 EUR per US-gallon (3.8 litres)
Currency chart is 0.7985 US$for 1 Euro.
So we have to pay 6.80US$/ gallon.

Diesel is about 1.18Euro/ litre

But.... about 70% of it is TAXES & VAT.

I drive a 1993 VW-T4 model with 2.4ltr diesel engine and I feed it with
rape-oil for 0.68 EUR per ltr wich is 3.24 US$ per US-gallon and gives a
rather cheap milage per Euro for european circumstances.....

And to become on topic: I have a CB-radio in my car... :-)
http://fweb10.ok-webhost06.de/forum/attachment.php?attachmentid=34&thumbnail=1

and a little antenna mounted on a trailer:

There is a difference between blacks and niggers.
Some notable blacks (those who didn't loot their way through life) :
Richard Pryor
Tina Turner (Ike would fall into the nigger catagory)
Oprah Winfrey (she's an idiot but she worked to get where she is)
Dave Chapelle
- Feel free to add your own.
It's the niggers who are looting not the blacks. Not those who chose not to
live the stereotyped lifestyle.

you are speaking to the wrong person looking for house price sympathy.
60 miles east of nyc and a 1500 sq ft house on a 1/4 acre goes for 369K
and if its new 10k per year in taxes. people rent their sheds to
illegals to pay the bills.

New Orleans was not built below sea level. Over the years, due to subsidence, it sank below sea level. Many other major cities around the world are now in the same or very similar situations. When you pump water and hydrocarbons from beneath you, what do you expect to happen? Duh!

a linear is illegal if....
1. It takes less than 50 watts to drive it
2. it comes ready to work between 24 and 35 mhz
3. An amateur may build one per year for personal use, but otherwise
any amp that fits the first 2 descriptions is illegal.

Terrible thing typing in caps. You should be taken from this place to a
lawful place of cap offenders and be flogged every half an hour until you
learn how to conduct yourself in a civilised typed discussion.... thats to
the retard who called himself "Magnum Sucks" btw, some cowardly back seat
person whos too shy to stand up to his comments with his real user ID, and
can only hide in the shadows....
When you do this your arguement is bereft of any serious consideration....

A quarter of an acre is what a lot of us could only dream about here. If your 369K house was here in the UK i bet it would be a cool 500K, if it was near london you could easily double that. ;o)
Look after yourself mate

I think to be honest anyone whith half a brain evacuated when they had chance.. they heeded the warnings. Secondly the power went out so basically to stay on air they would need to go in their mobiles which were probably underwater or stay indoors with a car battery and hope they could survive the same as anyone else as they would have had no water and no sanitation and quite probably only a few days food available. Fair play to the services who set up any "ham" radios to use but why should the average Jo Amateur have to risk his life because you think they should help out. Then again what would they be able to say... help we need help, we have looting rapes murder and need food, water and emergency shelter... we all know that, what would it have acheived. What the people in NO needed was instant responce from the armed forces to help evacuate, rescue and control order, not have to wait 4 or 5 days before serious help even being mobilised. In my eyes this is where the system fell apart... they knew it was coming, they knew it was going to be bad... but it seems those in power just werent up to the task..
I do agree entirely about the backup simplex radio to keep in touch. If Roscoe P Coltrain had a CB in his vehical back in the 70's (Dukes of Hazzard) how come theres none today ;o)... There comes a point where all this state of the art technology collapses, and without backups we go back to the dark ages...

3291. PA Speaker

Newsgroup: rec.radio.cb
Date: 2005-09-07 00:27:40 UTC
From: 240_Robert <seaningram@tdx.net>
Message-ID: <431e3281$1_3@newspeer2.tds.net>
Source record: 204178

I have a CB with the PA feature -- yet it don't put out enough.

I took a small guitar amplifier and removed the main amplifier and the AC line.

It takes 12 Vdc (Tip is Positive + --o)

I take the audio from the PA jack on rear of CB and patch it to the 1/4" jack input on the Amplifier.

2 terminals that were connected to the main speaker are used to patch a line to the external PA speaker that would be mounted somewhere away from the engine and the heat that it puts out.

Using the main controls I can adjust the volume and how much audio I want to go to the PA speaker.

I tried it this evening -- it is Loud and clear because I can adjust Treble and Bass to give it a non-distorted sound.

I heard the dogs a few houses down start up after hearing me do Li'l John's "WHAT?"

Can't wait for HALLOWEEN, yo.

P- out!

240 Robert.

How do you make a dead looter float?

First you get a tall glass, add two scoops of dead looter and 8 oz of cold milk, top it off with whipped cream and a cherry.

Lol, every newsgroup has them. With uk.rec.radio.cb we get a few amateurs
who are real shitheads abusing people for no other reason that they think
they are gods. Most are friendly and help but unfortunately you always get a
few who stink of wee and biscuits and are very lonely sad people...

Anyhows, look after yourself :o)

The thing is James the frequencies they use are legal. Its just the radios they use because they can encompass more than one legal band the powers that be dont like it. Stop signs and lights are there to control the traffic and are a safety issue. Theres a real genuine reson behind them although there are times theres nothing coming the other way and its a pain having to wait for them to change i agree. CB radio and Amateur Radio promote friendship through radio and is a harmless past time. I know there are a few jerks who ruin it for people and kill peoples relaxation time through running massive power and interfering with TV's, phones and the like. These are the people the powers that be should be after.

Anyhows, honk if your horney :oP

>
>

I fail to see where the Duh comes from. You think it was a silly question? I
asked to find out why as i dont know. So your saying New Orleans has pumping
stations sucking out natural resources from beneath the city are you? I
havnt a clue as i dont live there so i ask the question as we have been told
on numerous occasions from the News that NO is below sea level.
Besides which i thought, and i maybe wrong, that when oil was pumped out of
the wells in the oil fields its replaced by sea water not just left empty.
Also id find it absolutely amazing if a city the size of NO has suddenly
sunk over the past 100 yrs or so with the theory you propose. Or are you one
of these people who go on about the ozone layer and we'll all be underwater
in the next 200 yrs as the ice caps will melt due to global warming.....
What a load of old b$%%$cks that is. I do agree though that we need to find
new sources of energy as our natural supplies can only last a finite time
before anyone chucks that comment in.

3302. Re: I-max 2000 ground plane

Newsgroup: rec.radio.cb

On Wed, Sep 7, 2005, 11:10am (EDT-3) jaa69@webtv.net (Jaa Jaa) hit up the group with:
>I have a i-max 2000, is it worth the time to put

>a ground plane on it?

If you already have one, it won't hurt anything to add it, but it won't give you any noticeable improvement, either. If you're thinking of purchasing one, save your cash.

How do you make a dead looter float?
First you get a tall glass, add two scoops of dead looter and 8 oz of
cold milk, top it off with whipped cream and a cherry.
-
Actually, a late night comedian already beat you to the punch..sort of.
He called it a "Floating Corpse" and used little chocolate "people" made
of light chocolate that floated to the top of the drink which had the
color of river water,,forget what else he used in it. He also said he
was accused of being racist because of the chocolate figures he used,
but defended his concoction by pointing out there were no tiny people
figures made out of white chocolate to be had.

Good antennas, but the ground plane will not make much of a difference, but
if you need a noticable difference get a good 10 db increase in gain from
your antenna with a add on amp, now that will do some goood.
If 3-6 watts out peaking to 12 is good, then 40-60 watts out peaking to
120 is much better, now thats gain.

Nah, that's voodoo when you look at the subject header. An operator needs a
good antenna and coax/ground first.

>I have a i-max 2000,is it worth the time to put a ground plane on it?

I put one on mine, mostly because it was cheap, and I put it up when I installed the antenna. My receive is super quiet, and my performance is great. But I don't know if it is better with or without. Right now, I wouldn't change a thing, and I left it on. My CB is a Grant LT. I use that setup mostly for local chat. I also use the antenna for DX with my Icom 746, and it tunes 10-17 meters fairly well. I made a contact on 17 meters today. I also called Solarcon, and they said it improves the receive.

So, for the $35 it costs, I would put it up. It won't hurt, and it would be easier than putting it up later.

Vinnie S.

Apparently I'm unaware of the add-on radial kit that you are asking about.
I've never owned one of those.

I'd ask Jay if he thinks it helps, he's sorta our resident antenna guru in
this group so far.

Ask him about his credentials first tho.

Yea, unless ya have 3-4 year old kids, in which case you have to spell
everything. which is bad when you do it at work btw. whish I could teach
the wife morse.

Ah, no beer tonight for me still recouping from the
weekend and holiday. Dark rum, Squirt soda, with Hawaiian
punch.

No no, I'm drinking rum to help with the beer hangover.
Got a new keg of Fosters for the month.

Landshark

Cardiff is in Wales and is quite a cheap place to live to be honest. and
Bude is a holiday resort and oldham is a bit like your bronx ;o)
Not sure about Southampton i think its somewhere inbetween. I lived near
Swansea a few years back and that was just up the road from Cardiff. The
house we bought there was massive in comparison to a lot of UK houses, it
had a huge garden and a garage at the top that more resembled a bungalow,
with hot and cold running water and inspection pit. It was half the price of
houses in Birmingham UK as there arent many skilled jobs there.
I know of course it depends where you buy to the prices.... The image also
is Americans all live in big houses with well paid jobs and have huge
gardens and gas guzzling flash motors whereas we all live in a little house
and catch the bus and its always raining
I blame Hollywood for that ;o)
Regards,
Graham

When New Orleans was "established" it wasn't below sea level. A
> lot of the present day city was built below sea level. Some engineer
> had the bright idea of pumping it out to extend the size of the city.
> Yes, New Orleans has sunk over the past 100 or so years, along with
> the levees.
> Check out this USGS document:
>
> http://dels.nas.edu/dr/docs/burkett.pdf

I see this as a college student type document to try to explain what might happen with predicted change in patterns caused by global warming etc. Ive seen all sorts of "expert" predictions and possible results many times and they all seemed to have valid background theory but in reality.. like most things on paper looked good but with no REAL SOLID proof figures, statistics and charts can be made to say anything. The figure of 9mm subsidence per year equates to 90cm over 100 years, or 3ft. Naff all really. I think its more along your suggested second part where you say they pumped out the water to expand the city then expanding it under sea level rather than the whole place subsiding under sea level since being made. . I will do a bit more investigating on this as its caught my imagination now and it might be interesting to study it.
Many thanks,
Graham

its amazing that people dont realize what hydrocarbons and other
chemicals are doing to the atmosphere. the industrial revolution in the
uk caused cities (birmingham for example) to become black with soot.
since then how many millions of tons of particulates have been expended
and people believe it has no effect? the adirondack park north of me has
many lakes devoid of fish due to the acid rain from the midwest coal
firing plants. c'mon graham, fossil fuels like the iron maiden will come
and go. good riddance.

New Orleans Didn't Just Go Nuts

It's Been Nuts...

[by Mac Johnson] 9/7/05

Where to even begin in being one more idiot talking about Hurricane Katrina?
I hate the subject. It should be a news item and a humanitarian cause --a
huge recovery and reconstruction effort joined in by all. It should not a
political issue fit for "commentary."

But the Hurricane tore at more than just the weaknesses in New Orleans' inadequate levees. The shortcomings of the levee system were known to all
who ever lived on the Gulf Coast, and in the end, all the levees really did
was encourage expanded development in a huge geologic bowl sitting between a
large lake, North America's mightiest river, and the immense green waters of
the Gulf of Mexico. The whole booby-trap was simply yet another triumph of
government subsidized and directed development. And its failure was long anticipated.

What was not anticipated was the way the Hurricane tore at our human divisions.

First out of the gate were the Holy Men of the Cult of Global Warming, who
couldn't wait for the first dead to wash up before they declared the Hurricane irrefutable proof of Global Warming and a direct responsibility of
George W. Bush.

Next up were the racial ambulance chasers, always looking for another grievous injury to add to their political caseload. Looking at the Sea of
Black faces abandoned without transportation, food, water or protection, they somehow managed to look past the City's Black Mayor, Black Police Chief, Black City Council members and all the other Black office holders that run the 67% Black city, and found that the whole thing was: white

folks' fault. Yet another example of racism at its worst.

This opened up a torrent of Bush-bashing, since he was the closest Republican that had any responsibility for the City. The Democratic Governor of Louisiana -- though white -- was merely a victim of the whole thing it seems, just like the Mayor of New Orleans. Nobody has any power in this world other than George Bush. Nobody has any responsibility. George Bush is now the navel of the world for his enemies. If a butterfly flaps its wings in Central Park, it's George Bush's fault. And the butterfly is racist. And it was blown there by Global Warming.

And at some point during the disaster, the most disturbing of all the infighting began. The thugs of New Orleans turned on their neighbors like a Mongol horde. Looting erupted, as did arson and robberies, shootings and beatings. Rape became an organized crime as gangs preyed on the defenseless stranded girls of New Orleans. Pharmacies were looted and hospitals were surrounded and invaded in a manic hunt for drugs. New Orleans Mayor Ray Nagin couldn't stop such junkie armies from destroying much of what was left of the City's medical infrastructure, but he could excuse them, explaining that it was all just people "looking for something to take the edge off their jones, if you will." Actually, no, I won't. (The mayor added a few minutes later in the same interview: "You know, I'm not one of those drug addicts. I am thinking very clearly." And nobody said different, Mayor.)

Barbarians with an edgy jones shot a cop in the head, shot a national guardsman, halted life-saving evacuations by firing on helicopters and humvees. Police had to mow down a gang of six shooting at contractors who came to repair the levee breaches. A group of white civilians that came into the city in private boats to save as many refugees as they could -- giving lie to the racism howls of the media -- gave up and turned back because people began shooting at them, trying to take their boats.

Soldiers who should be concentrating on rescue operations are carrying full battle gear through the streets of an American City, opening doors with rifles at the ready. Overnight, it seems, The Big Easy had become Thunderdome, and Mad Max was nowhere to be found. In the middle of the worst

American natural disaster in over a century, gang warfare,
anti-authority
psychosis and individual malevolence finished off the hope of tens of
thousands that had survived the flood. It did more to demoralize the
nation
than the storm had done.

What happened?

The storm may have triggered the violence, but it did not cause it. What
we
saw in New Orleans was what happens in America's most murderous city
when
the criminals realize that all the cops have left.

It wasn't desperation, or insanity, or protest. It was New Orleans,
without
police.

Many people believe that Washington, D.C., is the "murder capital of
America." And indeed it often is, but that is only because such rankings
are
limited to "major cities" -those with a population of 500,000 or more,
and
New Orleans has (or had) a population of 485,000. Were it not for this
actuarial accident, Washington, D.C.. wouldn't even have a shot at the
murder title. The per capita murder rate in New Orleans is 16% higher
than
in "Murder Capital" Washington, D.C.; and nearly 10 times the national
average. To have a murder rate equal to that of New York City, New
Orleans
would need to reduce its murders by 86%. No, that's not a typo.
At a time when crime is plummeting in most of America, it has been
steadily
increasing in New Orleans. And one cause is simple: The New Orleans City
Government has run its law enforcement apparatus into the ground. On a
per
capita basis, New Orleans has less than half as many cops as Washington,
D.C.: just 3.1 police officers per 1,000 citizens. Turnover has become a
huge issue, as young cops leave at the first opportunity. A report
conducted
<http://www.bestofneworleans.com/dispatch/2004-02-10/news_feat.html> for
the
city two years ago said that New Orleans was "bleeding police officers."

The strain shows. Fewer than one in four murder cases in New Orleans
results
in a conviction. 42% of violent offenders have their charges dropped by
prosecutors because the cases are "not suitable for court." Many in New
Orleans will not now testify against the thugs that they know -- more
likely
than not -- are going to be released Scot-free. People don't even bother

calling the police in New Orleans anymore. In 2004, academic Researchers conducted an experiment in which they had police fire 700 blank rounds into
the air, in a single afternoon, in one neighborhood. No one -- not one person -- called to report the gunfire. It was background noise.
The report on police levels mentioned above stated that New Orleans needs
2,000 cops just to maintain order in normal times. When Katrina struck, the
city had only 1,700. No more than 1,500 are on duty now, after dislocation,
desertions, resignations, and two suicides.
There is no wonder the place went chaotic. There should be no mystery. It is
barely under control on a good day.

Why are the cops leaving? They are utterly demoralized. They face low pay to
fight a losing war against crime in a city that will not commit resources to
the battle. "We have to use our own shotguns," one patrolman was quoted in
the New York Times. "This isn't theirs; this is my personal gun."

They are demoralized because they have to bear the reputation of working in
what is widely acknowledged as the most corrupt police department in the country. More than fifty NOPD officers were sent to prison in the 1990's,
two of them to death row.

They are demoralized because they have to live in New Orleans, due to a strict residency requirement for police. And unless you are wealthy enough
to live in the perpetual party of the Vieux Carre, New Orleans is not a nice
place to live -- especially for those with children. 84% of officers with
children reported sending them to private or parochial schools, at their own
expense. That's quite an endorsement of Mayor Nagin's schools.

So they leave, and are not replaced. It is not just "white flight" either,
for those that want to see the world through racial lenses. Most of those
leaving are black officers.
All this is not to say that New Orleans has had no plan to reduce its high
crime statistics. For a while, one police district tried lying about the statistics. It meant letting some violent thugs go (and with an edge on

their joneses, I'm told), but it was cheaper than fighting real crime; and
it kept the tourists coming.

Asked if such lying meant that perhaps the NOPD should have its stats
audited by an outside agency, Police Chief Eddie Compass stated, "I don't
need an outside agency coming in. I think we have proven that we are capable
of taking care of our own house."

This is the same Chief that now screams on camera for outside agencies to
just take over. As soon as order is restored, you can bet the New Orleans
City Government will rediscover its need for independence -- and privacy.

The overnight crisis we saw in New Orleans this week has been a long time
coming. It was just the bursting of a purulent boil that has been festering
for years.

Undoubtedly, that is Bush's fault as well. Perhaps his Global Warming has
been putting an edge on criminal's joneses, unbeknownst to the City
Government.

What do you expect from a "C" student, particularly when the "Cs" are themselves actually grade-inflated symbols. Bush is an "F" student and a failure. Who else would have a black female as an advisor and then as, of all things, a Secretary of State. And who else would want Colin Powell as a butcher of West Asian peoples and as a Secretary of State. What you see is MULATTO America at war with non-white non-black peoples. The real WAR is only just beginning. Whites have chosen blacks as their FAVORITE RACIAL MINORITY GROUP. The Niggerization and Jewification of America is well on its way.
The prognosis is DEATH. Most of the peoples of the world are neither whites nor blacks. Wait, listen, and watch: Death is on the Wing.

Hello Steveo:

I am not real impressed with the short ground plane radials I have seen advertised for the I Max 2000.

I think 3 or 4 each 96 inch Francis Amazer Fiberglass Whip Antennas would be a good ground plane radial kit. Not the shorter ones I have seen advertised.

Kreedenitials attached:

Kreedentials:>.

Jay, what if the radials are coiled? At the correct length?

The antenna does very well from 10-15 meters. I get only a 1.8:1 on 15 meters
with 10% reflected power. On 17 meters, the SWR is 3.0:1, 25% relected power.
Yet with my tuner tunes very easily on 17 meters, and I made a contact in
Switzerland. Forget 20 meters.

Vinnie S.

New Orleans Didn't Just Go Nuts
It's Been Nuts...
[by Mac Johnson] 9/7/05
Where to even begin in being one more idiot talking about Hurricane
Katrina?
I hate the subject. It should be a news item and a humanitarian cause
--a
huge recovery and reconstruction effort joined in by all. It should not
a
political issue fit for "commentary."
But the Hurricane tore at more than just the weaknesses in New Orleans'
inadequate levees. The shortcomings of the levee system were known to
all
who ever lived on the Gulf Coast, and in the end, all the levees really
did
was encourage expanded development in a huge geologic bowl sitting
between a
large lake, North America's mightiest river, and the immense green
waters of
the Gulf of Mexico. The whole booby-trap was simply yet another triumph
of
government subsidized and directed development. And its failure was long
anticipated.
What was not anticipated was the way the Hurricane tore at our human
divisions.
First out of the gate were the Holy Men of the Cult of Global Warming,
who
couldn't wait for the first dead to wash up before they declared the
Hurricane irrefutable proof of Global Warming and a direct
responsibility of
George W. Bush.
Next up were the racial ambulance chasers, always looking for another

grievous injury to add to their political caseload. Looking at the Sea of
Black faces abandoned without transportation, food, water or protection, they somehow managed to look past the City's Black Mayor, Black Police Chief, Black City Council members and all the other Black office holders that run the 67% Black city, and found that the whole thing was: white folks' fault. Yet another example of racism at its worst.
This opened up a torrent of Bush-bashing, since he was the closest Republican that had any responsibility for the City. The Democratic Governor
of Louisiana -- though white -- was merely a victim of the whole thing it
seems, just like the Mayor of New Orleans. Nobody has any power in this world other than George Bush. Nobody has any responsibility. George Bush is
now the navel of the world for his enemies. If a butterfly flaps its wings
in Central Park, it's George Bush's fault. And the butterfly is racist. And
it was blown there by Global Warming.
And at some point during the disaster, the most disturbing of all the infighting began. The thugs of New Orleans turned on their neighbors like a
Mongol horde. Looting erupted, as did arson and robberies, shootings and beatings. Rape became an organized crime as gangs preyed on the defenseless
stranded girls of New Orleans. Pharmacies were looted and hospitals were surrounded and invaded in a manic hunt for drugs. New Orleans Mayor Ray Nagin couldn't stop such junkie armies from destroying much of what was left
of the City's medical infrastructure, but he could excuse them, explaining
that it was all just people "looking for something to take the edge off their jones, if you will." Actually, no, I won't. (The mayor added a few minutes later in the same interview: "You know, I'm not one of those drug
addicts. I am thinking very clearly." And nobody said different, Mayor.)
Barbarians with an edgy jones shot a cop in the head, shot a national guardsman, halted life-saving evacuations by firing on helicopters and humvees. Police had to mow down a gang of six shooting at contractors who
came to repair the levee breaches. A group of white civilians that came into
the city in private boats to save as many refugees as they could -- giving
lie to the racism howls of the media -- gave up and turned back because people began shooting at them, trying to take their boats.
Soldiers who should be concentrating on rescue operations are carrying full
battle gear through the streets of an American City, opening doors with

rifles at the ready. Overnight, it seems, The Big Easy had become Thunderdome, and Mad Max was nowhere to be found. In the middle of the worst
American natural disaster in over a century, gang warfare, anti-authority
psychosis and individual malevolence finished off the hope of tens of thousands that had survived the flood. It did more to demoralize the nation
than the storm had done.
What happened?
The storm may have triggered the violence, but it did not cause it. What we
saw in New Orleans was what happens in America's most murderous city when
the criminals realize that all the cops have left.
It wasn't desperation, or insanity, or protest. It was New Orleans, without
police.
Many people believe that Washington, D.C., is the "murder capital of America." And indeed it often is, but that is only because such rankings are
limited to "major cities" -those with a population of 500,000 or more, and
New Orleans has (or had) a population of 485,000. Were it not for this actuarial accident, Washington, D.C.. wouldn't even have a shot at the murder title. The per capita murder rate in New Orleans is 16% higher than
in "Murder Capital" Washington, D.C.; and nearly 10 times the national average. To have a murder rate equal to that of New York City, New Orleans
would need to reduce its murders by 86%. No, that's not a typo. At a time when crime is plummeting in most of America, it has been steadily increasing in New Orleans. And one cause is simple: The New Orleans City Government has run its law enforcement apparatus into the ground. On a per
capita basis, New Orleans has less than half as many cops as Washington, D.C.: just 3.1 police officers per 1,000 citizens. Turnover has become a huge issue, as young cops leave at the first opportunity. A report conducted
<http://www.bestofneworleans.com/dispatch/2004-02-10/news_feat.html> for the
city two years ago said that New Orleans was "bleeding police officers."
The strain shows. Fewer than one in four murder cases in New Orleans results
in a conviction. 42% of violent offenders have their charges dropped by prosecutors because the cases are "not suitable for court." Many in New Orleans will not now testify against the thugs that they know -- more likely
than not -- are going to be released Scot-free. People don't even bother calling the police in New Orleans anymore. In 2004, academic Researchers

conducted an experiment in which they had police fire 700 blank rounds into
the air, in a single afternoon, in one neighborhood. No one -- not one
person -- called to report the gunfire. It was background noise. The
report on police levels mentioned above stated that New Orleans needs
2,000 cops just to maintain order in normal times. When Katrina struck, the
city had only 1,700. No more than 1,500 are on duty now, after dislocation,
desertions, resignations, and two suicides. There is no wonder the place
went chaotic. There should be no mystery. It is
barely under control on a good day.
Why are the cops leaving? They are utterly demoralized. They face low pay to
fight a losing war against crime in a city that will not commit resources to
the battle. "We have to use our own shotguns," one patrolman was quoted in
the New York Times. "This isn't theirs; this is my personal gun."
They are demoralized because they have to bear the reputation of working in
what is widely acknowledged as the most corrupt police department in the
country. More than fifty NOPD officers were sent to prison in the 1990's,
two of them to death row.
They are demoralized because they have to live in New Orleans, due to a
strict residency requirement for police. And unless you are wealthy enough
to live in the perpetual party of the Vieux Carre, New Orleans is not a nice
place to live -- especially for those with children. 84% of officers with
children reported sending them to private or parochial schools, at their own
expense. That's quite an endorsement of Mayor Nagin's schools.
So they leave, and are not replaced. It is not just "white flight" either,
for those that want to see the world through racial lenses. Most of those
leaving are black officers.
All this is not to say that New Orleans has had no plan to reduce its high
crime statistics. For a while, one police district tried lying about the
statistics. It meant letting some violent thugs go (and with an edge on
their joneses, I'm told), but it was cheaper than fighting real crime; and
it kept the tourists coming.
Asked if such lying meant that perhaps the NOPD should have its stats
audited by an outside agency, Police Chief Eddie Compass stated, "I don't

need an outside agency coming in. I think we have proven that we are capable
of taking care of our own house."
This is the same Chief that now screams on camera for outside agencies to
just take over. As soon as order is restored, you can bet the New Orleans
City Government will rediscover its need for independence -- and privacy.
The overnight crisis we saw in New Orleans this week has been a long time
coming. It was just the bursting of a purulent boil that has been festering
for years.
Undoubtedly, that is Bush's fault as well. Perhaps his Global Warming has
been putting an edge on criminal's joneses, unbeknownst to the City
Government.

You ate paint chips as a child I'll wager.

OK I'm going to explain this just once and I'll type slow and try to
use as many single sylable words and grunts as I can so you'll
understand.

This is alt.tasteless.

Not alt.i.like.to.suck.my.daddies.choad, not
alt.i'm.a.no.necked.knuckle.dragging.neaderthal, not
alt.i.live.in.a.trailer.park, not
alt.my.big.goal.in.life.is.to.be.on.jerry.springer or alt.darwinbait.

It's alt.tasteless.

Where we like to make use of more then 10 percent of our gray matter.
Where those who post drivel such as your's are seen as coming from the
shallow end of the gene pool (in your case however I'd take bets your
from the kiddie pool) or are a Mormon who's idea of a hot Saturday
night in wanking to pictures of Queen Victoria or Bringham Young's
wives.

I would like to suggest some things to you.

1. Stick to news groups that are at your level of thinking, alt.find.the.hidden.picture.in.highlights comes to mind.

2. Get a vastectomy please don't polute the earth any further with sproggin from your single brain cell using loins.

3. Take a trip to New Orleans and have a big glass of Chuck's Muck...The rest of us will have a big laugh while we watch you die from a deadly case of liquishits.

Have an average day

HH

I just re-read that and that's not what I meant to say, sorta. By antenna voodoo I mean advertised gain factors, which seem to get more outrageous every year.

Your reflector idea makes sense as long as the mast can handle the wind load, it would reflect more.

I have to say your ground plane is the best I've seen. Do you still sell them?

Now now, nobody in the UK eats horsemeat. Not unless some sneaky country
packages it and labels it something else and cheekily imports it in.. So
whats the great meal you guys take pride in?? Cant be that turkey at
thanksgiving surely..
Potatoes are one of the most resourceful foods on the planet. You can make
so much from them, my favorite being Chips or in your case, fries. Roast
potatoes are gorgeous (when done right) then theres mash which can be more
flavoured by many things, the fav being cheese and then lightly grilled on
the top. Then theres the good old baked potatoe with whatever stuffing you

fancy..... so how can you knock the jolly old spud??
As for cabbage.... yuck.... but you arent forced to eat it by law

Yes that newsgroup has been abandoned by many now due to the previously mentioned amateur snobbery bantered about by "just a few" lamebrain no mate no hopers who delighted in belittling people. A lot have moved on to Yahoo chat forums but occasionally the group uk.rec.radio.cb comes to life and has its moments... I still use it although this week has seen no posts at all apart from mine asking for rig doctors for my cb pages. ...I know where Southampton is.. i meant ive never been there so i couldnt comment.. I commented on Cardiff and Oldham and Bude because ive actually been there a few times so know just a little about those places. Oldham like Leicester seems to be a dumping ground for undesirables and Asian asylum seekers... and quite a lot of the indiginous locals hate it and theres lots of racism about.. but it comes from both sides. Some areas a white person wouldnt be able to walk down a street safely but i suppose every country has its places like that. The average persons wage in the uk where i live is about 12K a year. In london it can be 3 times that or more if its a highly qualified professional job.
I think the idea of America and well paid jobs comes from the idea that your houses and ground they are on are so big and the cars you drive.. i can only go on what ive seen on TV and been told by a few friends who have been there. That might be the same for the UK in many countrys eyes thats why we get so many asylum seekers heading to our shores. The idea that theres a far better life waiting for them here. Thats true but they expect so much and when its only a little better for a lot of them... anyway i wont go on about that, thats another arguement ;o)
I dont know if youve ever visited my website but there seems to be more action on there than the UK newsgroup.. lol..
Take care,
Graham

>or so years, along with the levees.

> Check out this USGS document:

>http://dels.nas.edu/dr/docs/burkett.pdf

(I see this as a college student type document to try to explain what
might happen with predicted change in patterns caused by global warming
etc. Ive seen all sorts of "expert" predictions and possible results
many times and they all seemed to have valid background theory but in
reality.. like most things on paper looked good but with no REAL SOLID
proof figures, statistics and charts can be made to say anything. The
figure of 9mm subsidence per year equates to 90cm over 100 years, or
3ft.)

-
I concur with the above poster regarding the provided text. Glaciers
melt faster than that.

Looking on a few sites so far i have concluded that the original part of NO
was built above sea level whereas as it was expanded they drained out the
water after building levies so it was under sea level when built.. It
averages between 12ft above to a couple of feet below on the whole.. unless
the site i was looking at was wrong.
The thing is that studies into possible future events are just that..
studies to what might happen, often depicting the worst case scenario. You
should have seen the" Cable and Wireless experts" carefully worked out
growth of the internet. The one that made them decide to drop Hong Kong
Telecom and go with an offshore net provider... the shares were at £15 each
and after the net crash in growth (although it is rising but nothing like
these "experts" predictions) they are now worth around £1.50. So much for
the experts growth predictions there... and this was a global thing.

Governments do all kinds of surveys and projections to how things might go and a lot of them its a great way to raise revenues whereas no one knows the real possible outcome until it happens and then of coure its too late. Its like the Asian Bird flu and Mad cow disease. Only a very few people have died of so called related symptoms. Like in the 70's for us it was Rabies coming across from europe. How many people have died from rabies?? Now compair those figures with people who have died with drink related problems or cancer through smoking... yet theres nothing really done to stop these things because its a huge money maker in taxes for the government. They put up taxes saying its to persuede many of us to give up as its too expensive.. what a load of cobblers... they put the tax there because they know they can make a mint out of it, like alcohol tax, even car tax. They sneakily shoved an extra ?5 on it per 6 months saying it was to help out with greenhouse gasses... complete lies.
I live on the east coast of the UK and from when i was a kid the sea level hasnt risen at all. Surely it would have as its the North sea and were talking about 40 years.. some predictions ive seen say it could happen in our lifetime... yea right...
Has anyone actually stopped to consider the hole in the Ozone layer is actually naturally occuring and if it wasnt there we would be all stifled? A lot of the different weather conditions people are saying "it was never like this when i was a lad" are probably forgetting what it was really like.
On the odd occasion things are going to combine to cause "freak" conditions which do look bad. In 1953 my town was flooded and people lost their lives.. they said then it was caused by the rising sea and glaciers melting so on... it wasnt.. it was caused by tidal conditions caused by a high moon and a storm which hapened at the same time. Its never flooded since...
Anyways... dont be alarmed and sleep well tonight :o)

Fossil fuels will go, i agree. Im all for nucular power if theres a way it
can be handled safely. At the moment i still think were in our infancy but
because of "do gooders" continually bleating about its possible effects the
research done on it isnt sufficiant. We all know the natural fuels like coal
and oil will run out. My arguement is about this irreversable global effect
everyone goes on about with doom and gloom. Many cities were inundated with
smog and industruial plants managed by money making companys will always
happen but will recover. Think about all the crap that was thrown about in
Prehistoric times and our planet recovered. In fact it recovered perfectly
well.
Remember the long hot summer of 76.... in the UK it was so hot for weeks it
was amazing... Apart from the odd day here and there its never repeated
itself.
The other disbelief i had was when the guy earlier said New Orleans sank
under sea level due to continual pumping.... i dont believe that for a
minute.
Nice to discuss this in a civilised way though..
Good on you Jim

Interesting reading for the part. That said NO was still expanded to land
that had been reclaimed by building Levvys and draining the water so it cant
be just put down to subsidance although i will agree it must take some part
in it.
Thank you for taking time in posting the link

"I AmnotGeorgeBush" <iamnotgeorge@webtv.net> wrote in message
news:18566-43221A8C-454@storefull-3258.bay.webtv.net...
Government has run its law enforcement apparatus into the ground. On a
per
capita basis, New Orleans has less than half as many cops as Washington,
D.C.: just 3.1 police officers per 1,000 citizens. Turnover has become a
huge issue, as young cops leave at the first opportunity.
<<big snips for brevity>>

Hello, Twist

Not too dificult to figure out if New Orleans is hurting for funds for its' government. Rochester, NY, is also hurting yet funds keep disappearing. We lost funding for school nurses. The NYS head of education a few years ago (when a lawsuit was being lost by New York for counting NYC students as only 0.7 student in figuring state aid) stated that the NY constitution guaranteed a sound, basic education. He stated that an *eighth* grade education was sufficient!

Of course, the courts didn't agree with that accessment. So more funding went down to NYC and less to Rochester and other cities upstate that have bleed decent jobs for several years. So, the City of Rochester lost funding. They lost help for the school nurses from the county a year ago. Many schools were in poor condition and a number of them were closed this year. Meanwhile, a much wealthier suburban school district (which also receives state aid) supplied all its' eighth-grade students with their very own lap-top computer last year! They deserved it, however, as their parents make a lot of money (it is a "new money" suburb).

I suspect that along with the tax cuts to the wealthy came severe cuts to education and other aid to states and especially cities with problems. This has been handled with cuts in police, fire, and other services. To blame the cities for undermanned police and other departments misses the larger picture. The cities have a limited (and dwindling) propery value upon which they can tax. Rochester, years ago, started charging residents for street lighting (not deductable on Federal tax any more as it is a service, no longer a property tax. Thank you, Repooblicans, for exacerbating a problem). Sidewalk plowing, road plowing. They used to be part of the property tax, but were sued by a rental property owner as Rochester was exceeding the NYS limit on taxes a city can charge. Was it 3%? So, they charged the same, but changed the number. Now, they break out snowplowing, sidewalk plowing, street lighting, etc. You pay the same, but the tax was lowered. Go figure. Washington loves it as you cannot write it off anymore.

A $6.00 per hour job here nets $39.00 (out of a gross of $48.00) per day. Deductions include federal income tax, state income tax, social insecurity tax, medicare tax, and NYS unemployment tax. None of these are likely deductible on the federal tax by anyone working for those rediculous wages. Now I see $9.00 missing in various "taxes". Darn near 20%. Yet, what is it, 15% should be the top capital gains tax?

If you make $80,000 per year, the numbers get worse. State tax is over 7%, the feds .... social insecurity ... medicare .... OUCH!

If you make $20,000,000 per year, you are likely paying less (percentage-wise) than those folks. Yet, apparently, they are paying too much.

Meanwhile, at the bottom of the pile ..... those $5.15 per hour jobs (and even $7.00 per hour jobs) .... are concentrated in inner-city. There is no money there. Where are the cities to raise money from? Property values (except in certain outlying areas of the city) are going down every year.

Aid to the cities? Are you nuts? The millionaires have earned it and deserve to keep every penny.

And then blame the cities for not having enough police, fire, schools, ... and the list goes on.

Nice try.

Best regards from Rochester, NY
Jim

Id say American 5 star hotel, with a Fatty Arbuckles or McDonalds franchise
but you already know that...

So come on then mr food critic, give us an insight into what you eat then
which puts you in a position to criticise or even to know what your typing
about... and what do you mean by civilisation lowed in this regard... its a

bit of a strange statement...

The British police do carry guns, but only specially trained officers not every rookie cop. Unlike the US and although gun crime in the UK is growing were nowhere near in as much trouble as to need every officer to be gun bearing.. and what was that i heard on the news.... supermarkets were robbed of their guns by looters..... supermarkets sell guns ???? what sort of crazy shit is that?? youll be giving them away free with every box of bran flakes next ;o)

Being perfectly honest which restaraunts have you tried in the UK?? Some pub
grub can be amazing but it depends where you are, like anything. Ive had pub
grub you wouldnt want to look at never mind eat and other places it was
well tasty. I know some of the restaraunts in London you would need a
stomach pump afterwards or a hospital stay ..
As for Tea, you cant beat a nice hot cup with one sugar and milk. Coffee's

ok too but i tend to drink tea at home and coffee at work. As for serving cold tea with ice and sugar and fruit, ive never tried it but you couldnt really describe that as a pot of Tea
Theres also some very nice sandwich bars too which specialises in all sorts of sandwiches and french sticks..etc... its just a matter of where youve visited..
If you ever get to Birmingham on your travels try one of the Balti Houses.... they can be excellent. Look at it first though and make sure in your mind it looks a clean well run place... you know what these foriegners are like ;o)

Never had cold toast in a rack... ive always eaten mine hot.... Thereagain,
tea should be served Hot in a Pot not cold in a glass... we all do things
slightly different to each other. Being brought up one way doesnt mean the
other way is wrong... pancakes should have lemon and sugar on them not maple

syrup... we could go on...

Americans enslaved blacks and nearly wiped out the Native Americans because
they wanted to take the land... the wars with the north and south,
confederates and yankies were some of the nastiest and uncivilised conflicts
in your history and you were well established as Americans at that time and
was not down to the British Empire.... i dont know where you learned your
history but wherever it was.. if it was... id sue them (hope that wasnt too
cheap a shot)

I've always enjoyed 'Simpson's On the Strand' and the 'Hispanola'
(restaurant ship on the Thames near the House of Parliament). Are either
of those fine establishments still around?

Have a look

http://www.restaurantspy.com/uk/london/simpsonsstrand.htm

http://www.365tickets.com/attractions.cfm/attractId/379&afid=veyzk

So i would say yes indeed. I can imagine both these to be expensive to use
but they both look very tempting.

Not quite lad. Here in the former colonies we have what they
call WAL-MART'S or SUPER KMART'S. Now these fine
establishments are what we would call a one-stop-shopping's
store.
You could go in and get your clothes, tools etc etc, all the
while you're getting the food stores. On the way out of the store
you might as well pick up a 9mm along with a spare box of ammo.

Actually, different tribes were constantly fighting, and took slaves
when they didn't just kill them. Later, they discovered that they could
sell or trade their slaves for things that they wanted with the ships
that arrived on the African coast to trade goods. A lot of those ships
were from England, and they took the slaves to other places to sell
them.

Yes i know all about the wal-marts... over here its ASDA which although it
isnt as comprehensive as what you have over there its along the same lines.
Still suprising though that an item such as a gun, especially a 9mm can be
picked up so easily as anything else you wish to buy. The sale of guns seems
so casual its no wonder the Police act the way they do when stopping a
vehical. I have watched lots of the American reality cop programmes and
thought wow, how over the top is that arrest but when you stop and think
these guys could have .. like you say.. bought a 9mm while picking up some
groceries and with the amount of Nuts you have wandering the streets of the
US its no wonder they take no chances.
Oh we get our nuts over here too and i dont know whether its actually
getting worse or with the media today its a lot more publicised than in the
past but a swift squirt of CS gas or whatever they use normally does the
job... wouldnt work against an armed villan as you would be shot while
getting the spray out but fortunately most of our villans arent armed
especially the screwball ones. Well, not with guns anyhow...

So, they will wait till a lot more officers die before thinking about
arming them properly? Typical.

No wonder they don't eat doughnuts. They are too busy looking for
the perp who is going to kill them while they are not permitted to
protect themselves. They are so nervous they can't hold on to a nice,
big doughnuts and cup of hot coffee without dropping the doughnuts and
getting coffee all over their uniforms.

> and what was that i heard on the news.... supermarkets were robbed
> of their guns by looters..... supermarkets sell guns ???? what sort of
> crazy shit is that??

I have NEVER seen any guns or ammunition for sale in any supermarket
in any state that I have been in. That is as stupid as a gun store
selling doughnuts.

On the other hand, some Wal-Mart department stores do sell guns and
their super stores do sell food, but that still isn't a "Supermarket
selling guns" and several Wal-Mart stores were looted in New Orleans.

> youll be giving them away free with every box of bran flakes next ;o) No, breakfast cereal here is too cheap for them to be able to do that. Maybe they will let you collect 500 box tops and get a box of bullets, someday. I did heard about the salesman throwing in a free gun rack when someone bought a new pickup truck. ;-)

So Michael, the point you make here is that the different tribes in America were already into slavery and used them to barter with the English for goods and suchlike therefore making my point that slavery wasnt a result of the good old British Colonies... They may have been involved in the transportation of slaves for profilt but that wasnt the point. The previous post said, or tried to imply it was the British Colonies that introduced slavery where that simply wasnt the case.

Also most of the slaves who ended up in Britain werent treated quite as badly in comparison although they probably didnt think so at the time.

Anyhows this has lead a little off topic as so many threads do, but its nice to actually have a converstaion about things rather than cheap insults.
Thank you..

LOL, the british police are armed, we have special armed forces that are normally used in terrorist or gun related crimes but no.. the average PC plod has his telescopic baton (oooh err matron) handcuffs (Kinky) and a can of CS spray which he is a bit worried about using in case he gets sued...The donut reference i think is solely a US thing as ours eat a nice bacon sarnie while pounding the beat with children mocking them.
Mind you, that said most of our traffic police are being replaced by Gatso cameras to make huge amounts of revenue from the poor sods who dare go a couple of miles over a far too slow speed limit... but thats another gripe....

Personally, I prefer to watch a film or a good comedy.

I have never been into football. But, as my Son loves it, I keep track of the main news so that I can keep up with him.
I still think that Man-U are likely to be heading for a fall. They now have something like five times the amount of debt that sunk Chelsea... and just how many football crazy Russian billionaires are there?
Just look at Leeds Utd or even The Rover Group - how they were sunk over a long period, while
those in control walked away with money. Those who had been running Rover walked away with millions profit, while the business collapsed and a shed load of poor Brums became unemployed.

Regards'

Peter.

WELCOME TO MISSISSIPPI

O.K. I'll make an attempt to tell what's going on down here right now. It's hard to do for several reasons. First, because there is so much , it's hard to talk about. Let's try to focus on the positive.

You're right to be sick about New Orleans. They've turned into a bunch of animals over there. The idiots are shooting at the people who are trying to help them???? I think for the most part it's due to the frustration caused by the lack of response by their State Government....I mean, an SOS call? Give me a break.

Everybody is so focused on what's going on in the Superdome, the Mississippi story is going un-reported.

It's one of the bright things that are happening here now.

We are NOT leaving our people to wallow and starve in their own filth ,and the cadavers of loved ones. Were finding the live ones and getting them north as fast a possible. Most of the hundreds showing up here have at least had a meal, and a bath.

Haley Barbour the Governor and his administration will come out as true heroes in this disaster once the total story is told. The differences between the Louisiana and Mississippi responses are truly startling. Haley and MEMA had already had Mississippi declared disaster areas TWO DAYS before Katrina hit......What does that mean? A lot........

It means we had a two day head start on recovery. It means we had pre-positioned response teams...FULLY EQUIPPED ! It means we already had supplies being loaded on trucks to go to the coast while the hurricane was still going on. It means Federal representatives from FEMA were already IN State when it hit. Which means somebody on the Satellite Phone moving troops and aid our way while Louisiana was still trying to get ....

We have been dealing with looters a little differently on the coast. Once you shoot a few and leave their bodies laying in front of the store with their arms full of booty, the rest get the idea pretty quickly. Hasn't been a big problem. In the case of breaking in to get survival supplies...food and water. The police have shot the locks off the doors and helped take the stuff to distribution points.

School buses to haul refuges to shelters north, an idea Louisiana JUST figured out by the way, have been running shuttle since Wednesday morning.

They are pouring in here by the hundreds. Red Cross has been doing a GREAT job on setting up relief shelters in our area.

The local Governments have opened all of the convention centers and school auditoriums to them. I know it's hard to believe, but the local Friday night Football games have ALL been canceled this week. Our efforts are going elsewhere this weekend. My daughter is the editor for the local University newspaper. She asked me what she could do for these folks, and I told her" The main thing they need right now is bottled water". So she made a few phone calls and set it up with her newspaper and the local T.V. stations....in 24 hours they had collected over 600 gallons. This story is typical and is happening all over this part of the state.

Pulpwood haulers (lumberjacks to you Yankees) who showed up at Interstates and main feeder hi-ways heading south. Started cutting up the downed trees with their own chainsaws, and loading them up with their hydraulic boom hauling trucks. Opening the way south for our relief effort...nobody called them....they just showed up and started doing what had to be done. Welcome to Mississippi The local churches are jumping in too. Emmanuel Baptist has been cooking and serving three meals a day for 1500 people at the shelter there since Wednesday. Where is the food coming from? Strangers are just showing up at the convention center and dropping it off. Red Cross is providing some of it, but the majority is just showing up....from people who aren't seeking and never will be recognized. It's happening all over the state. again and again. Welcome to Mississippi.

Our local hotels are full of people here from New Orleans.....most are starting to run out of money, so we have begun collecting for their hotel bills and providing them with meals at the shelters. Quite a few in town have taken them in to their own homes...knowing they may be there for months. I filled up one guy's tank at the gas station Tuesday because he only had enough money for a few gallons. Welcome to Mississippi.

Flowed, jerkoff. You have no gift for context. You're simply
unwilling to admit the only thing to recommend eating in England is
that which you were given by those you subjugated, natve English
"cuisine" is pasty crap.

Read for comprehension -- he said, "ships that arrived on the
African coast". Doesn't sound to NA, does it?

Specially trained, like that lot who killed the brazilian guy?

Some training. Don't get ID. Take a leak instead of watching your
subject. Chase him down, again without ID. Pin him to a seat in the
Tube. THEN shoot.

Sorry, I don't give a ratfuck about these "my country is better than
yours" threads but do NOT give me this "Specially trained" bullshit.
That was an amateur screw up, that cost an innocent man his life.

The British ships that arrived on the US coast wanted cotton to take
to England. That is where they finally got paid. Then they restocked
the ship with goods for Africa and repeated the cycle. All they had when
they arrived on the shores of the US to trade their cargo was a ship
load of slaves and a few manufactured goods from England. They traded
both of them for cotton.

Only an idiot would mistreat any worker that was doing their best.
After all, if you kill all the help you won't make enough money to live,
will you? And then there were "Indentured servants" who traded a number
of years or labor for passage to the US, and were basically slaves
during that time. Legally they were the property of whoever paid their
way, till their time was up.

I never said I approved of any slavery. On the other hand there were
people of every race who were held in slavery at one time or another
throughout the history of mankind, and this still doesn't make it right
at any time.

I've been reading up on baluns, boy is there a lot of conflicting information.

OK, so I read there's a voltage balun and a current balun, and supposedly what I want for a quad antenna is a current balun.. anyone have a favorite site that'll give me the clues to making one?

I saw one page, they showed a ring with a piece of coax wrapped in different directions on each side of the ring.. is this ideal, or close to it? I assume I want a ferrite ring big enough to get the coax through, or can I use a plain iron or steel ring? This is going to be for a sideband CB, I'll probably never run more power than the stock base..

What about the coax wrapped around a piece of PVC? is this worth the 20 or so feet of coax or just a waste?

The beginner has too much information with no clues as to what is good and what isn't..

Thanks all,

John

John, Here is a really great site with plenty of info on quads. Good
luck. http://www.signalengineering.com/ultimate/

3440. SGC model SG-230 SmartTuner - Automatic Antenna Tuner on ebay

Newsgroup: rec.radio.cb
Date: 2005-09-12 17:22:28 UTC
From: wmtell@gmail.com
Message-ID: <1126545748.399037.42610@g47g2000cwa.googlegroups.com>
Source record: 204277

I have listed a NEW SGC SG-230 SmartTuner on ebay. As you most likely know, this is the ultimate automatic antenna tuner.

This is a commerical grade, state of the art antenna tuner for Ham, CB, commercial, marine, aviation, military, intelligence and shortwave use.

For more information or to see the pictures click on this link:

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=6802005559

If the linik does not work for you, just go to http://ebay.com and do a search for: "SGC model SG-230"

I have the ability to ship this unit worldwide.

Thanks,

Bill

Well given the standard of your spelling how are we supposed to know what you are on about. And as for gift of context the utter drivel you spout is quite amusing. It also lets others know you are quite immature and dont know an awful lot. If I was to get down to the same level as you I would say all you americans eat are donuts, turkey and mcdonalds..... thats the steriotype which i know not to be true... now you need to realise what you know is untrue too...

One occurance and the Brazilian guy was so innocent his address was found in one of the un-exploded back packs. The only thing he was innocent of was that he wasnt actually carrying a bomb and probably wasnt part of the 5 bomb assault team that day. What about the American Police who shoot to kill then ask questions later.... your saying this doesnt happen?
As far as my country is better than your country goes, i have never said that and nor will i. I have a huge amount of respect for America and its people.. well, most of its people... and you will find if you knew me at all i take as i find.. if people are nice to me i am nice back. I am nice to people who i dont know... until they make me dislike them... The specially trained quote is true... they are not normal Bobbies on the Beat.. but that said, even specially trained people screw up sometimes, its a fact of life.

Comprehension is a big word for you to spell correctly, its a shame the rest of it isnt too good... Let me say to you once more The British Empire didnt bring slavery to America, you managed that by yourself quite sucessfully. BTW slavery was around in the days long before the "British Empire", slavery even today is a way of life for many people.

Please dont think for one minute i support or ever did support slavery... because i dont and you know, as well as i that slavery still goes on in many countrys today, especially some third world countrys but there is also still a lot of it in the US and to a degree the UK too. I have no problems with the comments you have made Michael and on the whole i agree with you.
The whole arguement on this thread was someone whit half a brain saying it was the British Empire that created slavery.. and it simply isnt true. All i pointed out was that slavery was massive in the US and you even had internal wars over it so to have a go at the UK over slavery was a bit idiotic.
Cheers...

Actually it was the british colonies that introduced slavery in
America.
The first imported African slaves brought to the British North
American colonies were landed at Jamestown, Virginia in 1619.

Long before the U.S.A. existed.

In the 17th century, slavery was used as punishment by conquering
English Parliament armies against native Catholics in Ireland. Between
the years 1649 and 1653, during the Cromwellian conquest of Ireland by
the New Model Army under the command of Oliver Cromwell, thousands of
Irish Catholics were forced into slavery. Cromwell had a deeply
religious antipathy to the Catholic religion and Irish Catholics who
had participated in Confederate Ireland had all their land confiscated
and were transported to the West Indies as slaves.

Eh?? why are you telling me this?? I didnt say and never have that slavery
never existed in the UK and i never said The British Empire didnt condone
and use slavery. But the English never introduced slavery to the US

Chronology Of The History Of Slavery: 1619-1789

1619
The other crucial event that would play a role in the development of America
was the arrival of Africans to Jamestown. A Dutch slave trader exchanged his
cargo of Africans for food in 1619. The Africans became indentured servants,

similar in legal position to many poor Englishmen who traded several years labor in exchange for passage to America. The popular conception of a racial-based slave system did not develop until the 1680's. (A Brief History of Jamestown, The Association for the Preservation of Virginia Antiquities, Richmond, VA 23220, email: apva@apva.org, Web published February, 2000)

Note the word DUTCH....

When New Orleans was "established" it
wasn't below sea level. A
lot of the present day city was built below sea
level. Some engineer had the bright idea of
pumping it out to extend the size of the city.
Yes, New Orleans has sunk over the past 100
or so years, along with the levees.
Check out this USGS document:
http://dels.nas.edu/dr/docs/burkett.pdf

>(I see this as a college student type document

>to try to explain what might happen with

>predicted change in patterns caused by global
>warming etc. Ive seen all sorts of "expert"

>tax.

US is same way.

> They sneakily shoved an extra £5 on it per 6

>months saying it was to help out with

>greenhouse gasses... complete lies.

>I live on the east coast of the UK and from

>when i was a kid the sea level hasnt risen at

>all.

Actually, what we have here is a shrinkage of the shore, due to erosion.
In the north toward the pole, many villages record the shrinkage of the
polar ice cap and the yearly continual shrinkage of glaciers near where
they live.

>Surely it would have as its the North sea and

>were talking about 40 years.. some predictions
>ive seen say it could happen in our lifetime...

>yea right...

I've personally witnessed the marvel of mother nature, from earthquakes
to hurricanes, tornados and tropical storms, extreme heat and extreme
cold to forest fires started by lightning to flash floods and draughts
to dust storms. I've learned never to underestimate or second guess
mother nature. She can be your best frind and guide, but she can also
kill you like the bitch she can sometimes be.

>Has anyone actually stopped to consider the

>hole in the Ozone layer is actually naturally

>occuring and if it wasnt there we would be all

>stifled? A lot of the different weather

>conditions people are saying "it was never like
>this when i was a lad" are probably forgetting

>what it was really like.

Probably a little of both.

>On the odd occasion things are going to

>combine to cause "freak" conditions which do

>look bad. In 1953 my town was flooded and

>people lost their lives.. they said then it was

>caused by the rising sea and glaciers melting

>so on... it wasnt.. it was caused by tidal

>conditions caused by a high moon and a

>storm which hapened at the same time.

>Its never flooded since... Anyways... dont be

>alarmed and sleep well tonight :o)

I rest easy. Type B's live much longer. Like I said,,you can't fight mother nature, so why worry about her? All you can do is prepare (in some events) and not muck the earth up anymore than we have...and that's a whole lotta muckin'! Take 'er ez.

Hi good people,

I was always onder the impression that the Superstar 360 radio was based on the good old trusty Cobra 148GTL DX Mk2 (010 chassis)
Today someone put the point to me that the Mk 1 Cobra chassis (879 chassis i think?) was also used in the Superstar 360 models...
Can anyone confirm or deny this as ive never come across a SS 360 with a Mk 1 Cobra board configuration?

Regards,
Graham

>Absolutely... we know this but what sort of

>restraints are there on the average "Jo

>Shopper" from purchasing a gun from one of

>these places?

States enact their own laws regarding this. There are federal (national)
laws that apply, such as no felon may be in possession of a firearm. In
Florida, there is a wait period..I think it's two days, not sure, as I
haven't purchased a gun in many, many years. The wait period is
designed as and frequently referred to as a "cooling off" period so
someone who is pissed right off cant simply walk in and buy a gun and
walk out and go kill someone with it. Of course, this is where arguments
of how effective the gun laws are come in to play, as there is no
waiting period for a shotgun or rifle, only handguns.

>There must be some kind of control surely?

If that's what you want to call it. Besides, those who commit crimes
with guns in the US are usually already criminals for other reasons.

The addition of the ground plane kit in theory would lower the angle of radiation by a certain percentage. This gives the impression of gain. If your in a flat open area in Kanas someplace or are a avid DX'er, this may give you a very slight boost. But if you don't fall into those 2 areas mentioned above, save the cash.

No such language as American... you will find it is English, just because
you use a few different words or a few of your words have different meanings
its still English.. Try phoning someone in Tyne and Wear UK and youll have
even more diffuculty ;o)

It was a typo immediately corrected after noticing it.. now answer the
question.. besides which who said i was British... i could quite easily be
Australian bruce..

Hello Jay! I have two Philip's/Amperex pulls that I bought from a ham years ago, 4CX350A/8321 with low hours and original cartons and wrappings. Will take $29 each free ship! I have one of your I-10K's on backorder! Hope you can find the right grade of aluminum tubing and get caught up! What the hell are you building?

Lessee, spelling -- donuts mcdonalds i -- you have a lot to
criticize with. But since you think you'd have kicked German ass
alone, maybe you're better off caviling about spelling since you have
nothing substantive to argue with.

Hell, when I hear the skip rolling in on my CB, I know it's time to turn off the Robyn SB-520D and fire up the IC-720A to work some 10 meter DX!

Oh, yeah... I almost forgot. We want those rifles back... the ones American civilians provided from their own homes so you could protect yourselves when the Huns came a'visiting. You never returned them after the war. That's just plain rude.

I am on 10,12, 15, 17 meters, and hear nothing from Australia. I am in New
Jersey. I think the problem is when the band opens, one of us is sleeping.

Forget 11 meters. I hear nothing from foreign countries except Mexico.

Yes its a proper word even mentioned the the Concise English Dictionary...
try reading it sometimes, it will help with your spelling

**Yes but quite probably because you looked it up in the dictionary.... shame you let yourself down in the next sentance though mis spelling a simple word. You used "to" in place of "too"
By the way i dont own a pink horsie so either youve mistaken me for someone else again or you have this sort of fettish going on in your head.... It's, Isn't and Didn't are all correct terms of use. **

> You, in turn, followed up immediately with -- its, isnt, and

** Me the twit... lol, then you say a word that doesnt exist orthgraphy unless you meant Orthography. Horsie also doesnt exist as a word... i could go on.. and youd come back with more garbage so ill leave it there... carry on if you must but im not going to waste any more time on you... have a nice day now...

How are we to follow a conversation littered with grammatical errors that
make words unrecognisable? And as illiteracy goes, surely it's the "dum dum"
who can't spell that's illiterate. And as for betters... LMFAO....
As far as fundamentals go too, I was quite happy to have a sensible

meaningful discussion but, as with many postings in here, you let yourselves down badly with incorrect theories of History and seem to have no real grasp of reality and any realistic command of the English language. Then because the person posting isn't American you jump in with both feet then get upset when you're shown up. Mock me if you will but in the end it will be you who shows themselves up... 10-4

The English never introduced slavery to the US, it was the Dutch.. Anyway as you say, does it really matter? I wasn't the one to bring the subject of slavery up and to be honest i'm not that bothered if slavery was a "British Colonial" thing... Judge people by who they are today not by things that happened far in the past. Your great granddad could have "friendly fired" and killed his allies (my relatives) but I certainly wouldn't hold it against you.

I think its time to move on to more interesting topics, don't you?

I think you'll find it's the Irish that ignore the wishes of their fellow citizens and didn't care about their rights is actually what happened. If it weren't for the RUC and the Army you would have wiped yourselves out years ago. What possible motive have people got to riot, smash up and burn cars, shoot guns at people who are trying to bring calm to the situation and murder people (sounds very NO, maybe it wasn't the blacks there it was the Irish in black balaclavas)... And as for it would all disappear in a minute you live in cloud cuckoo land.
Now stop being so silly..

I have no interest or concern what language the "Mexicans" speak. America's adopted language is English and if you say otherwise you are a bloody fool..... full stop.

Sounds absolutely great and the way things should be. The news groups always home in on the lowest common denominator on any event like this, often completely missing the untiring selfless commitment by many people who, like you say, will never be known.

Theres many burning questions George Bush must answer, to the way this disaster was dealt with. Theres already been one resignation.. whether he was a scapegoat or actually directly responsible for "inefficiancy" i dont know but this will not go away..

This problem in New Orleans (and MS) is not so much an indictment of the government action and/or inaction but an indictment on the liberal "war on poverty." The city of New Orleans has a Democrat leader, the State of Louisiana has a Democratic governor. The war on poverty is a total failure in the state of Louisiana...under DEMOCRAT LEADERSHIP. No? Then why are there so many "poor" in New Orleans (70% below "poverty level)? It certainly isn't from "Republican obstructionism" because all of the leaders are Democrats. It's because the "poor" are the cash cow of the Democratic party. Democrats get their glory from counting the number of people they are helping. Republicans get their glory from the number of people who NO LONGER NEED THEIR HELP.

Give a man a fish (welfare check, WIC, food stamps...) and he'll eat for a day (and come back for more tomorrow, vote for you on election day and teach his children the tricks of the trade).
Teach a man to fish (teach him skills, give him a meaningful job, teach him accountability) and he'll have food for a lifetime and teach it to his children.

Kevin, WB5RUE

N8WWM guilty of FCC violations. According to the FCC, N8WWM, Dog Adair committed several violations over the air at the expense of the Toledo Amateur Radio Club by utilizing their repeater to break the law. The amateur club received a warning letter from the FCC concerning Adair's violations and were told to take steps to make certain the violations by Adair will not be repeated. Adair not only hurt the entire image of amateur radio with his inexcusable behavior, but damaged the reputation of yet another entity trying to further the good of amateur radio. It's a shame when bad apples like these make it so clubs can't even trust their own users to abide by the rules they were sworn to uphold. Adair is also an infamous presence on the internet. A google search of "N8WWM" reveals a peek into the world of the individual identified as Adair. In addition to FCC violations, Adair has, in the past, been accused of being a prolific spammer, breaking several internet laws and violating several terms of service agreements with internet providers.

How's your convicted felon old lady crisco kathy lee doing these days, any more convictions on her record?

KC8QJP Lee Kathleen <---- her address is the same as N8WWM on QRZ.com

http://acc.ohio.gov/dhearing.html
http://acc.ohio.gov/bdmn0401.html
FORMAL DISCIPLINARY HEARING-KATHLEEN R. LEE
Chairman Woods noted that Kathleen Lee was issued CPA certificate 36,525 on July 15, 1998. The hearing was to consider disciplinary action against Ms. Lee's CPA certificate pursuant to Ohio Revised Code section 4701.16(A)(5), conviction of a felony under the laws of any state or of the United States. Ms. Lee was convicted in the United States District Court, Northern District of Ohio of five counts of Aiding & Assisting in Filing False Tax Returns, a violation of 26 USC 7206(2), on June 12, 2000. Ms. Lee did not appear at the hearing. The Board agreed to deliberate the disciplinary action in a later executive session.
Action taken.
Kathleen R. Lee, CPA 4701.16(A)(5)-Convicted of aiding & assisting in filing of false tax returns. CPA certificate revoked.

No ones disagreeing with you. But still we wonder if the problem was in, say
hollywood, or some other well off part of the US you can bet your last
dollar action in rescue and help would have been a lot faster coming.
Thenagain, republican or democrat should make no difference in times like
these. I dont think the scale of the disaster was realised in the first
couple of days or if it was, it went un-reported to the top.
Back to the lower end or poverty class. A lot of these people prefer to take
the fish than to learn how to fish themselves. In a lot of cases, even in
the UK the help is there but its easier to take the fish. A man with the
desire to learn to fish can and will and would need no encoragement but
maybe a little direction. You can only show the way, you cant force people,
its un-democratic and against their human rights they will bleat at you.
I think the whole welfare system stinks. Its supposed to be there to help
those who cant help themselves not those who dont give two hoots..

Source record: 204398

From: bitbucket@yahoo.com (Kevin, WB5RUE)
>This problem in New Orleans (and MS) is not

>so much an indictment of the government

>action and/or inaction but an indictment on the
>liberal "war on poverty."

No,,it's a reintroduction to the poverty stricken and an awakening to the widening gap between the rich and the poor. Since 2001, more than 4 million people have declined to poverty level.

>The city of New Orleans has a Democrat

>leader, the State of Louisiana has a

>Democratic governor.

Indeed they do...and the local monies for flood containment and improvements come from the federal government...the Bush admin gave a pittance of what was recommended and asked for by the Army Corps of Engineers in NO.

>The war on poverty is a total failure in the

>state of Louisiana...under DEMOCRAT

>LEADERSHIP. No?

It's the republicans always waging "war" on their own people, whether it be their lost war on drugs (that theyre too stupid and arrogant to realize and too embarrassed to admit), their lost "war" on homeless, or as you say,,,"poverty".
Don't lose sight of things, though, Kevin, as Bush loves the poor,,,,,he makes so many of them.

> Then why are there so many "poor" in New

>Orleans (70% below "poverty level)?

The issue isn't poverty, it was the failure of the Bush admin to respond to calamity in a timely manner. After all, this is the president who told us he would protect us, that we were better off with him.

>It certainly isn't from "Republican

>obstructionism" because all of the leaders are

>Democrats.

I think your republican clown Richard Baker (R-Baton Rouge) spoke for
the mindset of many repubs last week when he said "We finally cleaned up
public housing in NO. We coldn't do it, but God did it."
Or perhaps you prefer the words of Barbara Bush, who said those people
who were moved to Houston were so much better off because of it.

>It's because the "poor" are the cash cow of the
>Democratic party. Democrats get their glory

>from counting the number of people they are

>helping. Republicans get their glory from the

>number of people who NO LONGER NEED

>THEIR HELP.

Unfucking real. I thought you way more intelligent than that, Kevin. You
are working the demos into your bullshit as one more way the sorry
repubs abdicate responsibility. Never mind Brownie wasn't even fired
after it was learned he lied (that's right... LIED) on his resume
concerning his personal experience with emergecy management. He said he
was an "Assistant City Manager" in Edmond Oklahoma on his resume, yet
city officials there confirmed to Time Magazine that Brown was an
assistant TO the City Manager, that they never had an "Assistant City
Manager" position and that his job was that not unlike an INTERN. But
that didn't stop Bush from giving this inexperienced cronie the
position. Gee, more failed Intel from the Bush admin,,,,this admin can't
even confirm a resume, and you want them running the country an in
charge of security. Then again, perhaps they -did- check his resume and
they didn't give a damn that he had no experience regarding emergencies
and disaster response whatsoever.

>Give a man a fish (welfare check, WIC, food

>stamps...) and he'll eat for a day (and come

>back for more tomorrow, vote for you on

>election day and teach his children the tricks

>of the trade).

Tricks: Brownie was hired by Bush simply because Bush trusted his friend
Joe Allbaugh, who was W's chief of staff as governor of Texas. Allbaugh
and Brownie were college roommates. Brownie is a failed attorney from a
semi-credited law school* (*according to theNew Republic). His career
experience is largely comprised of being a judge for the Arabian Horse
Association. Unbelievable, huh? But Bush hired him to be in charge of
tis country's disaster response. Shows he really cares, eh?

>Teach a man to fish (teach him skills, give him
>a meaningful job, teach him accountability)

>and he'll have food for a lifetime and teach it to
>his children.

Of course, we know what the Bush admin teaches,,,,,,they are out of touch. Five of the top FEMA execs of the Bsuh admin come with zero experience regarding disaster response. They are simply Bush loyalists who were rewarded.

>Kevin, WB5RUE

And we can't forget the White House Aid who said, two days after the disaster, "Getting truth on the ground in NO was very difficult". Guess she didn't have a TV. See, the facts of the matter stink up your attack of democrats and your trying to politicize this failure of the Bush admin. The breakdown began almost as soon as Bush took office. This disaster merely illustrates the Bush admin incompetence. Twenty four hours after 25,000 people were trapped in the NO convnetion center, Brown did NOT know these people were there. He learned of it only after the WH Aid physically carried into the oval office a wire story detailing the victims crying and begging for help on every news channel. As Maureen Dowd said,,,"Perhaps tomorrow that same Aid will come in with another wire story "NO WMDS in IRAQ".

Teach a man to fish (teach him skills, give him a meaningful job, teach him accountability) and he'll have food for a lifetime and teach it to his children

>No ones disagreeing with you.

Many disagree with him. The facts support it,,take a look at the new Bush favorability and approval ratings that came out today.....many of these polls were done by the same pollsters who the right was heralding when his approval rating was higher,,,like when he whored out Jessica Lynch to the media and world with made-up lies (read her book) in order to whip the country into a false sense of patriotic fervor. This was clearly a man using an innocent nineteen year old female soldier who suffered in ways most of us will never know (Thank God) for his own political gain.

> But still we wonder if the problem was in, say

>hollywood, or some other well off part of the

>US you can bet your last dollar action in

>rescue and help would have been a lot faster

>coming.

Already been done. I can tell you from first hand experience that his brother Jeb had help out and around in Florida not long after the eye of the storm passed. Ditto for every single hurricane this state has seen. Even with Andrew, officials took the bull by the horn and were on the

streets the same day.

>Thenagain, republican or democrat should

>make no difference in times like these.

Exactly,,,,but mistakes were made and accountability needs implemented. Once again, people dies needlessly because of poor federal response and inaction.

>I dont think the scale of the disaster was

>realised in the first couple of days or if it was,

>it went un-reported to the top.

Exactly. Another breakdown and failure in the communication chain of command in the Bush admin. All they had to do was turn on TV from day one. Brown himself was clueless for 24 hours and didnt even know the convention center held over 25,000 people until almost a day and half later. Mass failure.

>Back to the lower end or poverty class. A lot of

>these people prefer to take the fish than to

Like those in Iraq who refuse to come to an agreement? You know who I speak of,,the majority,,,you know,,,the Sunnis, Shiites.

>I think the whole

>welfare system stinks. Its supposed to be

>there to help those who cant help themselves

>not those who dont give two hoots..

Already reports have surfaced in Buckhead-Atlanta area of some of those federal disaster debit cards being used to buy stuff at expensive designer clothing boutiques. Yup,,,this admin really knows what they're doing. Never mind that the federal budget, already a mess pre-Katrina, is now an incredible funny joke on paper. Can you say tax cuts and intangible tax relief that affect only two percent of the wealthiest?

******

More important on a verticle antenna is that the ground plane helps to
isolate the feedline from the antenna. Then the feedline is no longer
part of the antenna system and does not alter antenna tuning.

Yes but when I fire them up and ask my friend 20 miles down the road
how I sound I don`t want someone in Texas saying I sound good :)

Well G'day again !!

Well i make contacts into the west coast USA on 38 lsb and 275550 usb but am i hear them just rocking on through, nothing to do with one sleeping and the other awake cause 7 am in the morning here is 1 pm day before us on the west coast USA and a few more hrs later on the east coast. been along time since i have made contacts into the east coast but still get into CAL and oregon good. might have to try something different here see how it goes. LOL. but as far as skip goes here in australia it has been poor :(... with openings lasting for very short amounts of time... anyway will keep playing around and listening, ya all have a G'day .... cheers from thunder downunder 01 :)

you're.

No, I'm saying, we don't call them "specially trained." We call them
suspects, yank them off duty, and investigate them. Occasionally they
actually face justice. The rest of the time, the elected officials
feel our wrath.

They may not be normal Bobbies on the beat, but their "special
training" has to go beyond ballroom dancing and proper behavior around
the Royals. Like, how to handle a high-stress situation and not let
the adrenaline cloud your judgement.

What's the difference, main difference, between the Florida hurricanes and the New Orleans one? New Orleans is still under water. It's going to be very difficult, if not impossible, to rebuild until the water is gone. In Florida the water was gone almost immediately. In New Orleans the damage wasn't caused so much by the storm directly but by the breach of the levies.

Regardless of the causes of the damage to bring race and/or racism into this is totally irresponsible. Yes, most of the victims are black. So what! They are all people, their color doesn't matter. In Florida most of the victims were white. Did you hear any of them whining about racism?

Like I said before, it's not a question of the government's failure in this storm. It's the fact that the liberal government of Louisiana has failed totally for the past forty years in its "War of Poverty." Face it, the war is lost! But then I doubt that it was ever meant to be won, the "poor" are the Democrats' cash cow so there is no desire to fix the problem that is multi-generational. Back in the middle of the nineteenth century the "Democratic party" was pro-slavery. It was a Republican president who gave the order to free the slaves. The Democratic Party has always been the party of the "down trodden" and they do what they can to keep them there.

This problem in New Orleans (and MS) is not so much an indictment of the government action and/or inaction but an indictment on the liberal "war on poverty." The city of New Orleans has a Democrat leader, the State of Louisiana has a Democratic governor. The war on poverty is a total failure in the state of Louisiana...under DEMOCRAT LEADERSHIP. No? Then why are there so many "poor" in New Orleans (70% below "poverty level)? It certainly isn't from "Republican obstructionism" because all of the leaders are Democrats. It's because the "poor" are the cash cow of the Democratic party. Democrats get their glory from counting the number of people they are helping. Republicans get their glory from the number of people who NO LONGER NEED THEIR HELP.
Give a man a fish (welfare check, WIC, food stamps...) and he'll eat for a day (and come back for more tomorrow, vote for you on election day and teach his children the tricks of the trade).
Teach a man to fish (teach him skills, give him a meaningful job, teach him accountability) and he'll have food for a lifetime and teach it to his children

>No ones disagreeing with you.

Many disagree with him. The facts support it,,take a look at the new Bush favorability and approval ratings that came out today.....many of these polls were done by the same pollsters who the right was heralding when his approval rating was higher,,,like when he whored out Jessica Lynch to the media and world with made-up lies (read her book) in order to whip the country into a false sense of patriotic fervor. This was clearly a man using an innocent nineteen year old female soldier who suffered in ways most of us will never know (Thank God) for his own political gain.

> But still we wonder if the problem was in, say

>hollywood, or some other well off part of the

>US you can bet your last dollar action in

>rescue and help would have been a lot faster

>coming.

Already been done. I can tell you from first hand experience that his brother Jeb had help out and around in Florida not long after the eye of the storm passed. Ditto for every single hurricane this state has seen. Even with Andrew, officials took the bull by the horn and were on the streets the same day.

>Thenagain, republican or democrat should

>make no difference in times like these.

Exactly,,,,but mistakes were made and accountability needs implemented. Once again, people dies needlessly because of poor federal response and inaction.

>I dont think the scale of the disaster was

>realised in the first couple of days or if it was,

>it went un-reported to the top.

Exactly. Another breakdown and failure in the communication chain of command in the Bush admin. All they had to do was turn on TV from day one. Brown himself was clueless for 24 hours and didnt even know the convention center held over 25,000 people until almost a day and half later. Mass failure.

>Back to the lower end or poverty class. A lot of

>these people prefer to take the fish than to

>learn how to fish themselves. In a lot of cases,

>even in the UK the help is there but its easier

>to take the fish. A man with the desire to learn

>to fish can and will and would need no

>encoragement but maybe a little direction. You
>can only show the way, you cant force people,
>its un-democratic and against their human

>rights they will bleat at you.

Like those in Iraq who refuse to come to an agreement? You know who I speak of,,the majority,,,you know,,,the Sunnis, Shiites.

>I think the whole

>welfare system stinks. Its supposed to be

>there to help those who cant help themselves

>not those who dont give two hoots..

Already reports have surfaced in Buckhead-Atlanta area of some of those federal disaster debit cards being used to buy stuff at expensive designer clothing boutiques. Yup,,,this admin really knows what they're doing. Never mind that the federal budget, already a mess pre-Katrina, is now an incredible funny joke on paper. Can you say tax cuts and intangible tax relief that affect only two percent of the wealthiest?

*I think your becoming a bit silly now. Everyone at sometime makes a mistake.. thats why its so heavily publicised when it happens because its out of the ordinary. Ive seen film footage of an american police woman accidentally shooting a suspect while hes on the floor and being restrained and handcuffed without undue problems. Does this mean the american police all shoot the criminals when they are helpless on the floor? no.. it was an accident in the heat of the moment.. if you want the clip so you can see im not making it up i will find it for you..

You suffer the same problems in America so dont give me that. It was a one
of rare occurance thats why it was so well publicised. He was taken down and
shot because at the time it was genuinely thought he was a train bomber. If
the police had held back or tried to arrest him as they would in any other
circumstance other than a terrorist alert with the recent bombings making
the police on "high" alert, and he had actually detonated a bomb you would
be critical then also for not taking him down when they had the chance.
You have no time for negotiation or confrontation with these guys as they
are prepaired to die and dont give a damn who they take with them... in fact
the more the merrier... its not like dealing with your average criminal. The
second they realise they have been discovered the bomb goes off...
It is a tragic cock up.. i agree.. but no way is it a common occurance.

> if it means my daughter has to become bilingual then so be it. i am...

Well its nice that you are bi... it gives you more options in life. As far
as i dont know whats going on in NYC it doesnt really matter. The simple
fact is the underlying language of America is English... there may be parts
of your country where it seems its the second language but that doesnt

really come into it.. The "alleged" first language in Wales is Welsh but most people there speak English but there are parts of Wales who are deeply Welsh and refuse to talk in any other language... they dont do too well either but its how they like it. Parts of Birmingham which is Central UK has pockets that speak Asian Languages. That doesnt detract from the fact that the UK's recognised spoken language is English.

Your president speaks English... our premier speaks English.. its how it is...

I esperan teclear pronto con usted. Los deseos m&#65533;s buenos,
Graham

One sec Jim, I never beat the hell out of anything.. I replied to postings that were aimed at me as truthfully and constructively as I could. I never got into name calling and "Yankie" bashing in any way and neither would I. Yet there were plenty of people replying to postings on the aforementioned thread who delighted in insulting the UK and me personally. If you go back and read my postings I believe them to be reaonable and constructive. Im not into namecalling or belittling people but I will reply to anything said about me or to me in the same tense as it was used to me. Im sure you would do the same.

As far as this NG being dominated by Americans i cant see the problem? Its an open forum to discuss CB related issues and the question I ask is a genuine question I would like to know the answer to.
Im under the impression that the Superstar 360 and the superstar 360FM are slightly different chassis radio's. The American version being the 879 board and the UK/european board being the 010. I might be wrong this is why i'm asking, and im hoping for someone who has the info to tell me so I can go away better informed. Are there two types of this radio or.. like the cobra 148GTL DX.. is there a Mk1 and Mk2 version?
Or are you saying anyone other than American radio enthusiasts are the only people welcome here?
Regards,
Graham

Already reports have surfaced in Buckhead-Atlanta area of some of those federal disaster debit cards being used to buy stuff at expensive designer clothing boutiques. Yup,,,this admin really knows what they're doing. Never mind that the federal budget, already a mess pre-Katrina, is now an incredible funny joke on paper. Can you say tax cuts and intangible tax relief that affect only two percent of the wealthiest?

As far as what ive heard and been told/ read about i cant disagree with you at all.
Take care,
Graham

From: bitbucket@yahoo.com (Kevin, WB5RUE)
>What's the difference, main difference,

>between the Florida hurricanes and the New

>Orleans one?

The hurricane Class (I, II, III, IV, V) of intensity.

>New Orleans is still under water. It's going to

>be very difficult, if not impossible, to rebuild

>until the water is gone. In Florida the water

>was gone almost immediately. In New Orleans
>the damage wasn't caused so much by the

>storm directly but by the breach of the levies.

>Regardless of the causes of the damage to

>bring race and/or racism into this is totally

>irresponsible.

Agreed, but one can not merely "disregard" the reasons for breach, as much as the Bush administration would like. Besides, I said nothing regrding race.

>Yes, most of the victims are black. So what!

>They are all people, their color doesn't matter.

>In Florida most of the victims were white. Did

>you hear any of them whining about racism?

>Like I said before, it's not a question of the

>government's failure in this storm.

Exactly, as there is no question whatsoever. The Bush admin most certainly failed.

>It's the fact that the liberal government of

>Louisiana has failed totally for the past forty

>years in its "War of Poverty."

So it's not about race but poverty? One can not colllectively speak of poverty without speaking of the blacks in the same manner one can not speak of the ever-widening gap between the haves and have-nots without mentioning the poorly constructed government that encourages such disparity, as has been lovingly embraced by the Bush admin from day one. And once again, you abdicate and ignore all responsibility for the federal positons filled by Bush (Brown) who were supposed to be on top of things like emergency disaster response, among other items. This shall not be ignored.

> Face it, the war is lost! But then I doubt that it

>was ever meant to be won, the "poor" are the

>Democrats' cash cow so there is no desire to

>fix the problem that is multi-generational.

Now you are getting to the crux of the matter. This government has no desire to "fix" the disparity and the poor's plights, so one can understand their extreme slow and incapable response to the disaster.

>Back in the middle of the nineteenth century

>the "Democratic party" was pro-slavery.

So was the republicans throughout much of American history. In fact, Lincoln may very well have begun the republican hypocrisy that has become such staple in today's usual politics of the right, as he was a -slave- owner.

>It was a Republican president who gave the

>order to free the slaves.

The war was north vs south, not repub vs demo.

> The Democratic Party has always been the

>party of the "down trodden" and they do what

>they can to keep them there.

By "they", you astutely and correctly refer the republican party. You, sir, are right on this count.

>Kevin, WB5RUE

It is *your* words and *your implicit indictment* that I quoted above.
You said that he "was so innocent his address was found..." not the
police, not anyone else. YOU.

Now, either the police screwed up, or this is English Justice and
that's just okay. One or 'tother.

Now, I'm working on the assumption that they screwed up. Fine. What
I'm saying is that this so-called "special training" (your phrase
again) they got isn't up to the job. Some random Bobby may not carry
a gun, but those who do -- and are authorized to use force to
potentially preempt a terrorist act -- DAMNED WELL BETTER BE TRAINED
IN HOW TO MAKE A SNAP DECISION UNDER STRESS.

Your "special training" isn't worth shit.

1 US Gallon = 3.785 Liters.
1 imp Gallon = 4.545785 Litres.
1 imp Gallon = 1.201 US Gallon

> either way the boys in euro pay a boatload more than we do.

At &#65533;1 per Litre, we are paying &#65533;4.54 per imp Gallon, about &#65533;3.78 per US Gallon.

I am not sure of the present rate, but taking Graham's figure...

> > 1 GBP = 1.84189 USD 1 USD = 0.542920 GBP

I make that around $6.96 per US Gallon.

Regards,

Peter.

Hello, Vinnie

I actually have a setup in the car, but the antenna is in the trunk! I
guess I've sort of put it away for awhile. I do intend to get back
into it sometime in the near future. The rig in the car is an Icom
706 MKIIG modified for extended RX?/TX. It's a great rig. What is
everybody here running?

Here's my two cents about skip, for those who don't have an outdoor antenna. I used to live in a Townhouse, and upstairs I used an ACI full wave mobile antenna, mag mount. on a folding metal closet door (horizontal). I ran beautiful skip, using my Grant on a power supply. I talked to England, Austalia, and many other locations, when skip was good back in the late 80's to early 90's! Most people in my area didn't believe it, as my local signal was not good of course.

They work well when you tie rope to them and use them for anchors.

John:

This page gives a reasonable explanation of the differences between voltage and current baluns--you will generally wish to use the current balun. Voltage baluns count on the antenna being perfectly balanced to function well--a situation not generally encountered in CB.

For example, a voltage balun could be used on a simple 1/2 wave dipole to prevent transmission line currents from flowing--however, if one end of the dipole is nearer a tree, drainpipe, ground, etc--it would serve to unbalance the antenna (more or less depending on proximity to the object...

So, generally stick to using the current balun when using one in an attempt to prevent transmission line currents, you will have much better results over the voltage balun--generally...

What about yourself?

I use a President George. At home and in my car.
At home I use a homebrew FD4-like antenna with some additional wires in
the attic 6th floor.
I also use it for SWLing with my NRD-525 and PCR-1000
On fielddays I use a Blizzard 2700 (5/8L with radials) on a 50' mast
and/ or
a A99 (1/2L no radials) on a 20' mast.
A HB9CV for 11mtrs is waiting to be mounted on a rotor
On my car I use different antennas
A base loaded 1/4L stainless steel whip (4') or
a Firestick FGT-6 (6') or
a top loaded 1/4L DV27S (4' 4") or
a 1/4L DV27L (8'10")

I think the amp alone was going for over $1,000. I can't even begin to imagine the radio. The funny thing is people got them free years ago, as the military upgraded to more modern equipment. Now that are gold.

BTW, can you take a pic of yours and send to my email? I have never seen your setup.

have no Idea why people go goo goo over old 25 year technology, they were good in their days but for the money a much better radio can be found, solid state, no tubes to heat up, won,t heat up the room, even small they still drift somewhat, too big, but some sure like them.

Andrew was a cat-4, Katrina was barely cat-5. Not to minimize it but there really wasn't much of a difference in distruction caused directly by the storm. If the dam had not been breached the distruction would have been much less.

However my point was the the main reason for the delay in relief effort is that New Orleans was still under water. No one could get in. After hurricane Andrew, the day after, teams were combing the area. That was not possible in New Orleans. However in upstate LA and in Mississippi teams were on the ground the next day. No one talks about that.

>regrding race.

I don't believe I accused you of bringing up race but many others on the left have. The "reason" for the breach was wind and has nothing to do with either the Democrat party or Republican party other than it was a Democrat administration (local/state) in charge of maintanance and supervision. It was a Democrat administration (city) that FAILED to warn the people and get them to safety. It's not the federal government's job to pick up the pieces after a local government fails. It's the federal government's job to protect our boarders and to deal with other nations and not much else.

>
It is also an indictment of the local governemental failures. Where were the warnings BEFORE the storm hit? What did the local and state governments do to protect the people BEFORE the storm hit? It's NOT the job of the federal government to pick up the pieces of a local government's failures...at least it wasn't until FDR. In 2002 San Antonio and the surrounding areas had the worse flooding in 100 years. We got (ask for) no federal aid. There were the typical low interest federal loans for the rebuilding but we didn't need the Army and National Guard. We didn't blame the lack of help on the federal government. No! We recovered ourselves. Also you didn't hear about the racism of the storm and recovery efforts even though more than 80% of the people who lost houses were Hispanic.

Why can't you speak of poverty without bringing in the race of the poor? So what if X% of the poor in that part of the country are black. Just about the same percent of the total population is black. It just so happens. Remember, it's been under a Democrat administration for the past 40 years. Those who were poor 40 years ago are still poor, and how have poor children and poor grandchildren. Where's the "War on Poverty" going? So what if they are black, green blue or polk-dotted, they are still poor and the Democrat administration has done nothing about it. BUT...as you say there are "poor" and those "poor" are of a "minority" race the Democrat party can feed the fires of division and keep them right where they want them -- dependent! It's the only legal way of buying votes. "Vote for me and I'll guarantee that welfare check will keep coming without restrictions..."

>> Face it, the war is lost! But then I doubt that it
>

So where was the state government? It's the responsibility of the STATE to initiate relief first. Where was that? Remember, democrat state government, democrat county (parish) government and democrat city government. Failure at all three levels for the past 40 years. This storm did nothing but uncover that failure (and corruption it seems now).

Read your history books, the South has been predominatly Democrat...always...even during the days of slavery. They were the party of sessession. The Democrat party became anti-slavery when slavery became against the law.

>sir, are right on this count.
>
>>Kevin, WB5RUE

No, the "they" is always the democrat party, always. What has the democrat party done other than point out the differences? Certainly they aren't doing anything about it. To be a democrat liberal all you have to do is care and/or complain. There need be no corrective action and there rarely is otherwise this "war on poverty" would have been won years ago.

A liberal gets his self worth by counting the number of people he is helping.
A conservative gets his self worth by counting the number of people who no longer need his help.

Poverty under a Democrat administration is self perpetuating.

AMEN! Mike! Welfare is the only legal way to buy votes. "Vote for me and I guarantee (garr-rone-tee) that your welfare check will come without any restrictions....to you, your children, your grandchildren...." Welfare has morphed from a way to get back on your feet into a way of life. It was NEVER meant to be that.

3572. TUBES FOR SALE

Newsgroup: rec.radio.cb
Date: 2005-09-16 18:35:21 UTC
From: w4th@hotmail.com
Message-ID: <1126895721.259992.278030@g47g2000cwa.googlegroups.com>
Source record: 204459

I have for sale the following tubes

1. Brand new in factory sealed box Svetlana 4cx1600B $650 This is a factory fresh tube and is one of the new production tubes that has just

been released....The price on these tubes has gone way up from their original price, but if you have a Ten Tec or QRO amp that uses this tube, now at least you can replace the tube instead of butchering it up

doing a tube replacement with tubes that were not designed for the amp.

2. Brand new Russian 811a $95.00 for matched set of 4

3. Brand new Svetlana 3cx800a7 every bit as good or even better than Eimac $980 pair $500 for single.

4. Brand new 572B $195 for matched set of 4

5. Brand new 4cx800a/gu74b $190 pair

6. Brand new 4cx400a $125 each.

7. Single 3CX400A7 (8874) $399.95
Pair 3CX400A (8874) $789.95
triple set of 3 3CX400A7 (8874) $1,184.95
All tubes carry a full one year warranty

I also have a couple of brand mew sockets for 4cx800a tubes.

Brand new GS-35B tubes and sockets

I also have several other Russian tubes for sale.

I am cleaning my shack and all this stuff must go!

Thanks

Tom

3573. MORE TUBES FOR SALE

>Again, the local government gets a free pass?

>They had FAR more to do with the relief

>failure that Bush ever did.

Now you are getting to the crux of the matter. This government has no
desire to "fix" the disparity and the poor's plights, so one can
understand their extreme slow and incapable response to the disaster.

>The Federal Government is NOT here to take

>care of you.

So you hold the position government shouldn't feed those homeless with
MREs and give them clothes and help them relocate, eh? Just leave them
to rot, right? FEMA's job most certainly is to respond in a timely and
efficient manner and render aid. I am sorry you feel differently, but
that is a fact. If you prefer to call it "taking care of people',,,so be
it. One may posit and ponder and armchair-generalize all one
wishes,,,,it will not change the facts of the matter that Bush
bungled..again. Bush is the head of "big government" and FEMA most
definitely fucked up. I have lived through the wake of hurricanes.
Andrew, for example, was no exception. Although daddy Bush was slow also
in responding to Andrew, some National Guard was present and other
federal aid -was- available the day after the storm.

news:23106-43287E97-12@storefull-3256.bay.webtv.net... From:
bitbucket@yahoo.com (Kevin, WB5RUE)
>What's the difference, main difference,

>between the Florida hurricanes and the New

>Orleans one?

The hurricane Class (I, II, III, IV, V) of
intensity.

>Andrew was a cat-4, Katrina was barely cat-5.

>Not to minimize it but there really wasn't much

>of a difference in distruction caused directly by

>the storm. If the dam had not been breached

>the distruction would have been much less.

Exactly,,,illustrating NO was devastated not by the Class of Hurricane,
but by the breach of the levee that Bush diverted funds for Iraq from
when the Army Corp of Engineers asked for monies to shore up flood
protection.

>However my point was the the main reason for

>the delay in relief effort is that New Orleans

>was still under water. No one could get in.

No one -had- to get in. What about Armada drops like in Andrew? Why were
no aid packs dropped in NO? Tons and tons of food and first aid packs
were dropped immediately after Andrew.

>After hurricane Andrew, the day after, teams

>were combing the area. That was not possible

>in New Orleans.

The only reason it wasn't possible was because all the amphibious
vehicles and helicopters and guard equipment were in Iraq for the Bush
pawn game,,,er,,,war. So combing the area was most certainly possible.

>However in upstate LA and in Mississippi

>teams were on the ground the next day. No

>one talks about that.

Because good is expected from people. It's when they fuck up royally
that the world needs made aware.

>New Orleans is still under water. It's going to

>be very difficult, if not impossible, to rebuild

>until the water is gone. In Florida the water

>was gone almost immediately. In New Orleans
>the damage wasn't caused so much by the

>storm directly but by the breach of the levies.

>Regardless of the causes of the damage to

>bring race and/or racism into this is totally

>irresponsible.

Agreed, but one can not merely "disregard" the reasons for breach, as
much as the Bush administration would like. Besides, I said nothing
regrding race.

>I don't believe I accused you of bringing up

>race but many others on the left have.

And on the right. I heard Rush Limbaugh whining about the ABC news team
"shoving cameras in the faces of blacks asking them if they were upset
with the way President Bush handled the response". Limbaugh mentioned
their color, then turned around in the same breath and accused ABC of
being the one to play the race card by interviewing the blacks. If it
wasn't for Limbaugh saying they were black, listeners would have had no
clue. So it was Limbaugh playing the race card, just like so many other
lowlife scumbag repubs in this specific Bush administration.

>The "reason" for the breach was wind and has
>nothing to do with either the Democrat party or
>Republican party other than it was a Democrat
>administration (local/state) in charge of

>maintanance and supervision.

Wind they KNEW would occur..a breach they KNEW would occur and flood the
city,,,a predicament the Army Corp of Engineers tried to right, but Bus
denied the money they asked for flood improvement.

>It was a Democrat administration (city) that

>FAILED to warn the people and get them to

>safety.

Are you kidding? The entire country knew for days ahead of time this thing was drawing a bead on NO. Everyone was forewarned.

> It's not the federal government's job to pick up
>the pieces after a local government fails.

Again, you seem to either loathe the capacity for which FEMA was designed or disagree with their existence altogether.

>It's

>the federal government's job to protect our

>boarders

But he hasn't done that either. Pat Buchanan detailed this last week, the week before, and the week before that. Ask any landowner along the border in the south,,,,,,google "Minutemen" or the "MC13 street gang" Al Queda used to smuggle suitcase nukes into the US this year through Mexico. There are more ilegal aliens literally pouring into our countryon a daily basis at a rate higher than ever before. This is EXACTLY the reason the modern Minutemen movement down along the border was conceived. Bush keeps on failing. He's like King Midas in reverse,,everything he touches turns to shit!

>and to deal with other nations and not much

>else.

I disagree. I think if you examine the documents and mission statement of the National Guard, you will find nowhere is their mission to be sent abroad to deal with other nations. If that were the case, they would have been designated the "International Guard".

>Yes, most of the victims are black. So what!

So, personally, I believe Bush doesnt give a rats ass about them. In fact, Bush is so out of touch, he doesn't give a shit about you, me, the republican base, or much anything else other than his personal agendas which have clearly been proved on repeat occasion that they are not in lin eiwht what is best for the country. Cutting taxes for the two percent of the wealthiest and fighting like hell to give intangible tax relief to less than five percent of the taxpayers while soldiers are dying simply because they do not have adequate armor and teflon protection is fucking bullshit!

>They are all people, their color doesn't matter.

>In Florida most of the victims were white. Did

>you hear any of them whining about racism?

>Like I said before, it's not a question of the

>government's failure in this storm.

Exactly, as there is no question whatsoever. The Bush admin most certainly failed.

>It is also an indictment of the local

>governemental failures.

Sure,,,but the buck stops with the feds,,,always. tates always cede to federal powers in just about everything. Even the state courts (which have always been allowed to "go their own way" until the Bush admin) have been altered because of the feds. Feds dictating treatment to doctors, feds telling states they cant have this, they can't have that,..feds blackmailing states telling them if they pass a law the feds don't agree with, funding for (insert favorite department here.....roads, schools, etc) will be stopped.

> Where were the warnings BEFORE the storm
>hit?

All over the world via televison, radio, and internet.

>What did the local and state governments do

>to protect the people BEFORE the storm hit?

>It's NOT the job of the federal government to

>pick up the pieces of a local government's

>failures...at least it wasn't until FDR.

Yea,,well that's along time ago and things have changed...like FEMA.

>In 2002 San Antonio and the surrounding

>areas had the worse flooding in 100 years. We

>got (ask for) no federal aid. There were the

>typical low interest federal loans for the

>rebuilding but we didn't need the Army and

>National Guard.

NO did.

>We didn't blame the lack of help on the federal
>government. No! We recovered ourselves.

>Also you didn't hear about the racism of the

>storm and recovery efforts even though more

>than 80% of the people who lost houses were

>Hispanic.

The entire world wasn't made aware of San Antonio like they were with NO.

>It's the fact that the liberal government of

>Louisiana has failed totally for the past forty

>years in its "War of Poverty."

So it's not about race but poverty? One can not colllectively speak of poverty without speaking of the blacks in the same manner one can not speak of the ever-widening gap between the haves and have-nots without mentioning the poorly constructed government that encourages such disparity, as has been lovingly embraced by the Bush admin from day one. And once again, you abdicate and ignore all responsibility for the federal positons filled by Bush (Brown) who were supposed to be on top of things like emergency disaster response, among other items. This shall not be ignored.

>Why can't you speak of poverty without

>bringing in the race of the poor? So what if X%
>of the poor in that part of the country are

>black.

You answered your won question.

>Just about the same percent of the total

>population is black. It just so happens.

"It just so happens"? Like a cosmic coincidence? I don't buy it.

>Remember, it's been under a Democrat

>administration for the past 40 years. Those

>who were poor 40 years ago are still poor, and
>how have poor children and poor

>grandchildren.

There is a very prestigious section of NO where many wealthy blacks live,,,,blacks who were born into poverty and who overcame adversity in NO to rise to the status of mover and shaker in that town.

>Where's the "War on Poverty" going? So what

>if they are black, green blue or polk-dotted,

>they are still poor and the Democrat

>administration has done nothing about it.

You just said it wasn't governments place to do anything about it, now you take the partisan oad and say the demos should have done something about it. How about the states that are traditionally repub? Several of

these states have horrible crime rates and cities that are burned out
with plight.

>BUT...as you say there are "poor" and those

>"poor" are of a "minority" race the Democrat

>party can feed the fires of division and keep

>them right where they want them --

>dependent! It's the only legal way of buying

>votes. "Vote for me and I'll guarantee that

>welfare check will keep coming without

>restrictions..."

>Face it, the war is lost!

I'm not the one you need convince. It's the repubs who continue to wage
useless intangible "war" after war on "wars" they continue to lose..like
the war on drugs, just for starters. The cash they toss into this war
against Americans could feed the nation's hungry children and shoe the
poorest children in America.,,,but they won't do that, because then they
would have to admit they fucked up, and the repubs can't do this under
the tutelage of fuckups like Bush and his father....this family somehow
feels they are above the little people and are above reproach. The
scumbag we have for president actually conned many people in this
country into thinking that questioning the government is unpatriotic,
when the opposite is true.

> But then I doubt that it

>was ever meant to be won, the "poor" are the

>Democrats' cash cow so there is no desire to

>fix the problem that is multi-generational.

Now you are getting to the crux of the matter.
This government has no desire to "fix" the disparity and the poor's
plights, so one can understand their extreme slow and incapable response
to the disaster.

>So where was the state government?

Name me a single state that is capable of sustaining without federal
aid and absorbing their own costs after such a calamity. Just one.

>It's the

>responsibility of the STATE to initiate relief

>first.

Where the hell does it say that? How the hell can the state initiate relief when all their equipment was commandeered by some alcoholic cowboy from Texas for a grudge-fuck match in Iraq?

>Where was that? Remember, democrat state

>government, democrat county (parish)

>government and democrat city government.

...who must yield to federal powers like all other states.

>Failure at all three levels for the past 40 years.

Failure for 40 years? Obviously, you are repeating rhetoric you hear and not what actually is. Anyone who has ever been to NO knows for there certainly was no failure of government. I've been there for a Superbowl Party and for many Phat Tuesdays and Mardi
Gras'. The city is a party town and a great host.

>This storm did nothing but uncover that failure

>(and corruption it seems now).

Let's talk about failure.....leadership, strength, and security were the W calling cards during his campaign. The country bought it. Leadership...he failed when he took us to Iraq on intel crafted around policy. Strength,,he failed us on this poignant point when he told us the war in Iraq would be "swift". He failed us again when he told us "Baghdad has fallen" and "Mission accomplished." Security...he failed this on so many counts that if you haven't heard him admitfailures regarding homeland security measures in the past few weeks, you simply refuse to acknowledge it. Just in case you need a nudge,,,,,,there were several Anthrax attacks post-911 in Florida....Bush FAILED to not only prevent these (even with all his bullshit Patriot Act garbage), he failed to apprehend the suspects. Also there is the MC13 gangs, the illegal aliens..on it goes, man, on it goes. The man is a failure as president.

>Read your history books, the South has been

>predominatly Democrat...always...even during

>the days of slavery. They were the party of

>sessession. The Democrat party became

>anti-slavery when slavery became against the

>law.

Where did all that come from? One discussion at a time..

>Back in the middle of the nineteenth century

>the "Democratic party" was pro-slavery.

So was the republicans throughout much of American history. In fact, Lincoln may very well have begun the republican hypocrisy that has become such staple in today's usual politics of the right, as he was a -slave- owner.

>Urban ledgend, Lincoln didn't own slaves.

Ummmm.....he did own slaves on several plantations. I'll get back to you with the pertinent facts. Mary Todd had much to do with this change of heart.

>Washington owned slaves but Lincoln himself

>did not.

>It was a Republican president who gave the

>order to free the slaves.

The war was north vs south, not repub vs demo.

>The Democratic Party has always been the

>party of the "down trodden" and they do what

>they can to keep them there.

Actually, the republican party is made up of many poor people who think they will be rich one day and vote republican for "when that day comes". This is a frequent occurring phenomenon that gained its most momentum during the first days of the war. Conservatism, however, at least W's improper and tweaked version, has peaked and is now on its way out.

By "they", you astutely and correctly refer the republican party. You, sir, are right on this count.

>Kevin, WB5RUE

>No, the "they" is always the democrat party,

>always.

Then answer me why the republican party is steadfastly against voter registration automatically when one receives their drivers license.

>What has the democrat party done other than

>point out the differences?

Made more millionaires from average citizens than ever before,,,need I remind you this tool place under Clinton?

>Certainly they aren't doing anything about it.

Already did. Many of us made our nest egg under Clinton. Even though Bush is working hard to get it, he's fucked.

>To be a democrat liberal all you have to do is

>care and/or complain.

Exactly, because people like you are so snowed with bullshit from Bush. You perfectly typify the current admin's mindset,,,,,,that if you criticize the president, you're a liberal. And it's that thinking that has him on the ropes.

>There need be no corrective action and there

>rarely is otherwise this "war on poverty" would

>have been won years ago.

>A liberal gets his self worth by counting the

>number of people he is helping.

>A conservative gets his self worth by counting

>the number of people who no longer need his

>help.

That leaves out Bush. Do you have any clue how many millions of people hit poverty level since Bush took office? A record 4 million! But wait,,,,,if he makes 100,000 millionaires out of cronies like Cheney and Haliburton and Bechtel and Root, Kellog, and Brown, with more no-compete clauses and outsourcing,,,,that is considered successful by people like yourself, right?

>Poverty under a Democrat administration is

>self perpetuating.

Then poverty under a republican admin must be intended.

>Kevin, WB5RUE

I use an Icom 706MKIIG in the car with a Wilson Antenna (can't
remember the specs here). The Icom has been modified for 11 meters,
of course, but it goes many, many more places. However, I am blocked
by the fact that I only have an 11 meter antenna.

Any how, the setup is great when I use it, which is not very much.
Someday, maybe soon, I would like to figure out how to make an antenna
work in my attic...or get permission to erect an outdoor one.

How much better or worse does your attic antenna work as compared to
an outdoor antenna?

Buther Boy

You should not post any other than plain text to the newsgroups.
Posting HTML or pictures or other files to nonbinary newsgroups is
abusive and it is easy for comcast to track you down and to close your
account.

This is a nice TRX.
I'm dreaming on a Yaesu FT897.....

>
>Any how, the setup is great when I use it, which is not very much.

I can't really compare on my site.
My antenna setup is somewhat directional and not vertikal. But it works
surprisingly good. One leg of my FD4 is cut to work on 11mtrs.
I live in a noisy environment as there is a hospital with lots of
electronics spreading QRN just a few meters away....
But I can reach almost all stations within 30miles or 50kilometers wich
covers the whole city of Berlin and surrounding areas.
But it is hardly possible to work DX. There are some rare catches from
UK and Italy in the last decade.

When I go to another place outside just two miles away using a vertkal
1/2L-Antenna I just double or triple the reach of the groundwave. DXing
is no problem then whenever conditions are good.
I can tell you that there is a *big* difference using a whip on the car
or just erect a 20ft mast with a 1/2L or a 5/8L antenna on it. Even
though you might receive in same quality your own signal will rise up to
3 S-units at the other station. I made this experience using the FGT-6
Firestick antenna on the car compared with a 1/2L antenna on a 15ft mast.

So if you ever have a chance to put an antenna on the roof top, get
this chance.
In very most cases any short whip outside the building mounted at the
same height will outperform any other antenna in the attic.
A 1/4L carbon fibre antenna (i.e.DV27L) on the roof top with 2or 3
hidden radials down in the attic will be nearly unvisible.

Yes, and then they will come to your home, take your radios, kill you and
your family, and burn your house down. Is it worth it? :-)

I have recently resurrected my old GPA (1/2 wave), it is on the barn away
from the house.
Extra thick coax.
Difference is like day and night.
Less interference from my computer stuff, a lot more stations.

....

Easy enough to do. Have someone claim his body, call the ACLU and they will
continue the looting via the legal system.

I haven't looked to see what these particular "wonderful bargains" are,
but what A considers to be trash and will consign to the dumpster B
might be in desparate need of and pay money for. And as long as B pays A
more than eBay charges (plus the shipping charges), A is ahead.

Perce

On 09/18/05 11:01 am TNT tossed the following ingredients into the

In your opinion... besides which their SNAP DECISION was to shoot the f_cker. And didnt they do it well. The fact they screwed up is neither here or there... they took him out... The American police do the same, it happens... i wont be shedding too many tears.. will you?

The Irish are a law unto themselves. That said, at least the Irish ie. the
IRA apart from the pub bombings and once when a bomb went off early, had a
bit of humanity and did actually warn about their bombs to give people time
to evacuate.. they were into terror rather than murder although it did used
to happen.
We thought it was simmering down with the disarmament and disbandment of the
IRA but then there was the rioting the other week with the orange march....
god they hate oranges ;o)

> C'mon Graham, you stated all posters are racists. Why would anyone post
> a response to your query after that enlightnment?

Eh? i said everyones racist to some extent, even if they think they arent. I agree i said that but what has that to do with a different thread asking about the topic of the group (CB radios) Why drag racism into it for no other reason you think i might be racist??. Everyone in their life does something someone will take offence to whether it was meant or not. Besides which most people recognise this statement to be true and not get upset with it. If i watch a fight on TV between a black man and a white man i want the white man to win... not because i hate the black man but would like to see someone of my race do well. That would be seen as being racist by some as i didnt support the black guy just because he was black... if i say good morning to a white person on my travels then i see a black guy in a hood walking past me who doesnt look like they are interested in whats going on around them i would not say good morning... just because i would feel uneasy distracting this guy... am i racist?? maybe i am, but i never said i wasnt. Im tolerant but thats the point... you can have racist tendancies but be tolerant of other races. I wouldnt want to date a black girl... its just my preference same as i wouldnt date a ginger haired white girl... she probably wouldnt want to date me either but there you go.
Besides which if you look close enough most of the Americans who post in here have very strong racist views... so why wouldnt they answer my posts??
Cheers Jim,
Graham

3644. Base Antenna Suggestions for Attic

Newsgroup: rec.radio.cb
Date: 2005-09-19 07:36:46 UTC
From: Buther Boy <me@privacy.net>
Message-ID: <7hqsi1ds0vglphie37rrccnnd8f1o3naui@4ax.com>
Source record: 204532

Is there a good base antenna that can be used in the attic? I have a lot of room, but haven't measured my attic. I would say there is at least 12 feet of free vertical space...maybe even enough for an Imax or A-99. Any suggestions you have would be great....Thanks!

>Buther Boy

The Imax is 24 feet. Forget it. The A-99 is 18 feet. You would have to out it at a 45 degree angle. You best bet is a 1/2 wave dipole.

Forget the vertical in the attic idea. I tried it and there was a ton of noise. I was able to shoot skip, but had little local communications.

Vinnie S.

Well, you'll be hearing something soon..it will be a huge sucking sound
and it will be your tax dollars going to Mars. See, the out-of-touch
President Bush has these priorities and they sure as shit ain't yours or
mine or any of the "little people" who pay the majority of taxes. Latest
word from Bush is more government services are going to be cut (let's
start with the White House) to pay for portions of his laughable item he
refers to as a budget.

Date: 2005-09-19 20:29:14 UTC
From: Lou Franklin <lou@cbcintl.com>
Message-ID: <ps7ui15od0ehde8ld5phaspc04jid3ipa2@4ax.com>
Source record: 204538

To learn the technical TRUTH about CB Radio without all the hype from people who are just plain ignorant, check out the following books from CBC International. They're selling right now at a big discounts on our EBAY & AMAZON stores too.

Check it out!

To see exactly what these books look like, plus all the specific, chapter-by-chapter details, see our Web at:

www.cbcintl.com

Some of the books included are:

BOOK #1: THE "SCREWDRIVER EXPERT'S" GUIDE To Peaking Out & Repairing CB Radios. List $25. The most popular "big dummy's" guide ever published on do-it-yourself CB repairs & modifications. Covers peaking of receivers, transmitters, modulation, mike problems, antenna & SWR problems, detailed frequency modifications for both crystal & PLL radios. Loaded with charts, illustrations, and specific instructions for most brands including the new export models. This latest edition also covers slider and broadbanding tricks, FM conversions, and much more!

BOOK #2: THE CB PLL DATA BOOK. List $20. The only complete reference source on CB PLL synthesizer circuits ever published! Detailed PLL theory explained in layman's terms. How they work, and how to modify them for many more channels. Includes specific PLL block mixing diagrams, truth charts, & IC pin function diagrams for nearly every PLL chip ever used. Covers all the most popular U.S. & export chassis, with specific listings of all models using the chip.

BOOK #3: UNDERSTANDING & REPAIRING CB RADIOS. List $42. Giant 370-page technical book for the professional repairman. Picks up where the "SCREWDRIVER EXPERT'S" GUIDE leaves off. Includes circuit descriptions & troubleshooting guide for 23- & 40-Ch., crystal & PLL, solid-state & tube, AM, FM, SSB, CW, American & export models. Covers test equipment (& where to find it), transistor basics, synthesizers, receivers, transmitters, power supplies, T/R switching, antennas, interference, parts & accessory sources. Over 350 illustrations including schematics, charts, and photos. Huge subject index also lets you look up repairs by symptoms. This is "must" reading for any serious CB technician!

For details on our Galaxy-Ranger Service Manual (2nd Ed.) go to:

www.cbcintl.com/galaxy.htm

3654. FREE! "THE CB EPROM DATA BOOK" OF FREQ. MODS

Newsgroup: rec.radio.cb
Date: 2005-09-19 20:29:26 UTC
From: Lou Franklin <lou@cbcintl.com>
Message-ID: <4t7ui15uj843bo4fsq8bb3lrut9qqlmidn@4ax.com>
Source record: 204542

FREE!!

For advanced techs and serious radio hobbyists, we're now offering a FREE copy of our previously published "CB EPROM DATA BOOK" by Martin Pickering. (EPROM = Erasable Programmable Read Only Memory.) We sold it for many years but it's now out of print. This little manual of 60 illustrated pages is an absolute GEM of CB technical knowledge you'll just never find anywhere else. And it's yours for FREE from our Web site.

This book reveals the secrets of advanced channel programming, and picks up where our "CB PLL DATA BOOK" (www.cbcintl.com/pllbook.htm) leaves off. You'll get a thorough background in how these amazing programmable chips can be used to modify many popular CB PLL circuits for expanded frequency coverage. Covers the basic programming techniques, and even includes real PC board artwork for making EPROM circuits. Sample artwork includes EPROM boards for the popular MB8719, PLL02A, ï¿½PD2824, and ï¿½PD858 PLL circuits.

Best of all, the price is right--namely, FREE! Download your FREE copy of "THE CB EPROM DATA BOOK" (948 KB Adobe PDF) at:

www.cbcintl.com/docs/EpromBook.htm

Don't forget to check out all our other CB specialty books, plans, kits, & high-performance accessories at:

www.cbcintl.com

SAVE MONEY! We regularly run EBAY auctions in which you can save up to HALF the cost of our most popular CB books and accessories. To see what's currently on sale, double-click the line below:

Do you think I would be able to shoot skip with a 1/2 wave dipole? And
can you recommend a manufacturer or model number?

Thanks.

Easily shoot skip. You would have some local success. But you might run some TVI. Hang it as high as you can get it, away from AC power wires.

http://www.geocities.com/Augusta/7117/antenna.html

Here is the formula for the antenna. You can easily make you own. Get some 14 gauge wire from Home Depot. Cut the 2 wires about 9 feet long per leg, solder one wire to the center conductor, and one wire to the ground braid, and then trim 1/2 inch at a time, to the SWR you need. Make sure you use electrical tape or shrink tubing to insulate where you solder. When trimming, trim both ends the same amount, each time you cut. They need to be equal. You will be closer to about 8.66 feet when it's all set and done. Some people say to just make it out of the coax, and use the center conductor as one leg, and the braid as another. That is much harder and much more expensive. Use the 14 gauge wire instead.

Use a good shielded coax like Belden 9913. Also, some people here have suggested to coil the coax at the feedpoint using 10 turns - 6 inches apart. The best thing to do is find a can about 6 inches in diameter, and wrap 10 turns of coax around it, tape it and remove the can. This would choke stray RF and keep the coax from radiating. I am not the antenna guru of this group. There are plenty of them. This info comes from them, and most of it very helpful.

Whatever you do, don't run power with this. You will most likely produce TVI. Get yourself a good TVI low pass filter with the money you save.

Vinnie S.

>Buther Boy

Just use a 9' whip. Find a sheet of copper, brass or aluminum for a
base, drill a hole through the center for the stud, and mount it near
the center of the attic. For the ground plane, scrounge a transformer
for the wire, cut several pieces to go from the base to as far as you
can stretch them, then attach them to the base. Works great. And yes,
it works great for local comm, too. Vinnie's problem is that he didn't
follow directions and tried to cut the ground radials to resonance.
They -should- be cut for as long as your space will allow, which is
hopefully a lot longer than 9'.

You have enough room in your attic to construct yourself a quarter wave
ground plane using a 102 inch SS whip, the spring, the mount, a metal
mounting surface and several 108 inch long aluminum ground plane elements.
You should place the vertical element as close as possible to the roof
without touching it which would let you position the ground plane elements
at an angle toward the floor(ceiling joists). Your coax center conductor
would tie to the vertical element while the coax shield would tie to the
ground plane elements. the vertical element absolutely should not touch the
ground plane elements or the antenna will not work. I hope this gives you
the general idea.

Long time ago I used a CB on the road in my car.
Today,I am looking for info on a top of the line unit and/or a side band unit.
I never had a SB but I heard they reach out.
I live in Mobile,8 miles from I-65,16 miles from I-10 and 3 miles from U.S.98
I am a amateur so be easy

Long winded?? you mean not a short piss take answer like most who post in here.... couldnt be arsed if you looked if i cross posted or not. Anyway i was emailed the answer by someone who doesnt have a grudge and decided to help. Bigot eh?? yea whatever you say, im sure your right. Most people in here never replied because they never knew the answer. At least they kept quiet with nothing to add unlike some who like to be heard hey jim.
Have a nice day now.. y'hear.

> refers to as a budget.

I was thinking along the same lines... we all know about the poverty and so on in certain parts of America and all the suffering in the world which a few dollars per head would make a difference.... then Bush announces they will have another moonwalk within 10 years and a manned trip to Mars too. Billions its going to cost... billions that the Average Joe American will be paying in Taxes..... im glad you guys have so much spare cash "floating" around there... please send me some. As for the moonwalk i heard hes paying Michael Jackson to do that ;o)
Seriously though its about time space exploration went a bit further... we cant milk this plannet forever, we need more to conquer and wreck :o)

SSB only reaches out on SSB channels, which on 11 meters (CB) is channels
36-40. Some will say there's a freeband above 40, but it's illegal to
transmit there.

That said, look for a used HR-2510. Good luck. :)

Thanks,I have a Midland with a 4 foot magnetic antenna.Works okay on road at 2 miles.
I want a SSB for the house with a 12 volt hookup so I can use my car battery for power.

You know,if the police & rescue units in La. had had CB's they wouldn't have had a problem with communications.
In Ga.they use to have them in patrol cars.

Source record: 204559

Unidens are good, older non chineese cobra's.
Midland has a ssb unit with removable faceplate, scan...
The Midland is the only smaller/recent/full-feature ssb unit I
know of. The only other small ssb, that might be comparable
to the size of the am-only unit you might have had before is
the Uniden PC-122 xlr. Someone else here might know if there's
anything smaller to fit a modern car by Ranger/Galaxcy etc.

Personally the Midland peaks my interest. Actually for my car
I've got a dirt cheap mini am-only hooked up to a 5ft Francis whip.
and a "Ham" 2 meter rig. Now if you are looking for a CB for your
house the sky is the limit... I'd go for a large mobile type rig
like a President or a large Uniden or Cobra, etc.... or maybie
just the Midland with all its features and an external speaker.

Glad you didn't ask about antenna's, that would be a whole other
subject:) Basically you want to either drill a hole in your car
or use a trunk-lip mount, with an unloaded whip, bigger being better.
For the house there are many options, I've got a full wave loop hung
around a wall indoors here, due to restrictions. One or 2 of these
outside would be great if I could-- one oriented N-S and one E-W...
The ultimate is a rotatable beam up in the air. Never had one but
have talked on one..... . . . . . .

If you are going to use it in the car for info or talking to truck drivers, you only need AM. If you are doing to DX, then you get sideband. I have a Uniden Grant LT. It an ass kicking radio. The best part is the great receive.

Vinnie S.

Why buy in the US?
Just come a few kilometers over here to Germany and buy a 'President'.
They are virtually all made by Uniden.
The Grant, Jackson, George and Lincoln are fine for CB in Europe.

3689. Help with Teaberry

I have a 26 year old Teaberry CB. At one point I had the meter replaced
that burned out. This new meter doesn't give me any references to set
the SWR as the priginal. The CB shop simply installed the first thing
that fit.
It has good sound quality but the range is not what it was befor the CB
shop fooled with it ten year or so ago.
The thing cost a small fortune back then and an equivelent Radio would
probably too expensive now??
I assume Teaberry is no longer made???

The term "CB SHOP" is too loosely used. Some people call themselves techs
but in actuality - couldn't repair a CB if their life depended on it.
I've met a few in my day. Real dick heads. A few even took their repairs to
other places to have them done, then claimed to have done the work
themselves.

The "tech" and I use that term loosely - probably didn't stop to align the
circuit to allow the differences of meter to work with the SWR circuitry. OR
perhaps there was a diode or other part burned out in the process they
didn't bother to check. Who knows! They probably fiddled with the tx as
well - thinking it may make a difference. IN other words they could have
adjusted the tx to make the meter look good.
Just my 2 cents. And to the best of "my" knowledge - Teaberry is no longer
made.

Yes. CB-rigs are ALL crap.

Cheap HAM-rigs wich are in the same price range as expensive CB-rigs or so called '10mtr-radios'. But the HAM-rigs are galaxies ahead in quality. Take a Yaesu FT-817 or 897 or even one of those 'outdatet' early Icom 706 or Kenwood TS-50

Because of the price.
Uniden Pro 520XL
US - 55$
Poland - 100$
Germany ??? + schipping ??? (i live neart to east broad of Poland, over
600km to german broad)

Ok, thats an arguement :-)
At least be sure not to pay fees and taxes for import. This may reach
the US$ 100 in total as well.
Make the new toy *look* used and let your sister not take the original
box to poland.
In case of faults on the rig the shipping costs to US and back will be
nearly as much than a new one. So in case you might have to fix it by an
electronics in poland for much less. So the original case is no real need.

I just did a little google search.
Be aware that this american model provides AM mode *only*. This is very
little used all over europe exept 9AM (and occasionally 4-15) wich is
the trucker channel in europe widely. All other communication is in FM!
The 'Pro 520XL' is a real cheapie. You might have a look on this one:
'Team TwoWay 4040'
http://www.mwf-service.com/shop/product_info.php/cPath/21_23/products_id/193
It comes for EUR 55 plus shipping and is ways ahead on the Pro 520XL.
Sorry for this site is in german :-)
But this dealer claims to ship to poland too and he has a very
attractive price on this unit wich is at least EUR 5 -15 less than
others charge. So you may get in contact with him by mail.
I do not have any relationship with this dealer.

Greetings from Berlin/ Germany

Thanks for all this informations.

I prefere Uniden 520XL, because od three things - compact size, rf-gain,
very good quallity of tx/rx
Many of my friends have it and they are very glad of.
In Poland we use AM only yet, until EU didn't change it ;-)
We work in "0"-s (us in "5"-s) but it can be fixed for EUR 2 with no
problem.

I used to have President Harry Classic last time, but it was stolen from my
car :-/
It was almost the same as Uniden PRO 520XL, but President is more expencive,
so I prefere Uniden.

Now, my friend lent me Alan 87, gezas! It's big! Not comfortable to use in
compact car.

If you want an AM only, Uniden 68, don't get the ones with weather channels. These are readily available. If you DX on SSB, get a Uniden Grant LT. These will be tougher to find. I would stay away from new Cobra. ALso, Galaxy will drift like an unanchored boat.

Well Jim, apologies if I may have come over a little strong there but I took your last post to me as a bit of a knock down... maybe I was wrong.
Yes I think I now have the answer. I did ask a few other people who use my website and have gleaned that the superstar 360FM did in fact, just like the Cobra 148 GTL DX, have a Mk1 and Mk2 chassis.
I will be amending my website shortly now my broadband has "Miraculously" started working again all by itself after a week even though I complained every day to the wonderful group known as wanadoo and they said it was my end when I knew full well it wasnt (i had to use dial up in the meantime..grrr)
Anyhows, thanks to all who contributed.
Regards,
Graham

These 2 guys are mopathetic's sweethearts.

In other enforcement news, Hollingsworth wrote Gary A. Jaworske, KB8ZNS, and Zachary J. Jaworske, KB8YYG, both of Strongsville, Ohio, August 19 to tell both licensees that the Wireless Telecommunications Bureau (WTB) had referred their renewal applications to the Enforcement Bureau for review.

"That action was taken based upon a complaint filed against you alleging that you are marketing non-certified radio transmitters and that you are modifying certified radio equipment to cause it to operate on unauthorized frequencies and at power limits that violate Commission rules," Hollingsworth told both licensees. The Jaworskes have the same address but their relationship is not known.

Both Jaworskes are Technician licensees. Zachary Jaworske's license expired on April 19, while Gary Jaworske's ticket expired May 17, 2005. Since their renewal applications were timely filed, both will be permitted to continue to operate, despite the fact that their renewal applications now are in "pending" status.

Hollingsworth said the complaint, if valid, "raised serious questions regarding your qualifications to retain an amateur license." He asked each to respond to the complaints within 30 days. Hollingsworth said that he's heard nothing from either licensee to date.

That's because two of the larger troublemakers had their wings clipped and were TOS'ed. Notice not only has the malice dropped, so have the number of posts in the group. Shows how many socks were done by one specific poster. Anyways, things are good here. Managed to nab that small Palomar I needed for someone for a great price. I got the beam pointed to Galveston right now. Seems everytime there is a storm in the Gulf between us, Texas comes in strong. Have a Super weekend.

I think Mars has a better name :o) Thereagain why not slowly conquer all the
plannets one by one. The idea of a starship, like the Enterprise isnt
unfeasable, obviously it would have to be built in space and have shuttles
but the technology to make it is already there, its just the powering of it
that would cause the headaches.
It would have to be a world project though, not just American as the cost
could be shared and the technology also.
Can you imagine it though... talking on your CB and someone from Mars (or
Venus) on the side :O) 10-4

It takes a really sick person to wish harm or death on someone. And
then to top it off put a "A prayer for Galveston, in Rita's path" in
the subject line. I heard that bus blow up yesterday, and later found
out that 24 people were stuck in their wheel chairs and burned to
death. What kind of sick piece of shit finds humor in that?

Got some strange tree action happening here. Aspens dumping their
leaves while still green, maples dropping their seed pods before
they're mature, Virginia Creeper turning colors before the berries are
ripe, etc. Anything like that happening in your neck of the woods?

Interesting. This summer has been cooler than normal over here. And a
little wetter, too. Maybe the plants simply don't like abnormal
weather......

That would be my guess, especially when it's happening to different plant
species. May be an early fall leaf drop this year..

Do you mean this one
http://www.cb-museum.de/index2/Mikro-Mic/-/page1_g/page2/Herst_-_Manuf/E_-_H/Gen__Electric/gen__electric.html
It might be worthwhile dropping the museum a quick email asking them if
they know.

Hot and dry here also, the pecans aren't filling out. Unless we get
some rain real soon they won't be worth picking.

No rain, quite a bit of wind. It went off to the east of us. We were
hoping for a big storm, for much needed rain. I was hoping that the
storm would hit and knock our power out for a few day, good excuse to
stay home. The only real effect from Rita was that everyone that came
up this way emptied out all of the gas stations...

Well at least you didn't get mowed down or flooded, but it would have been
nice to get some rain. Katrina brought around 3 inches up here when it hit,
and now it looks like Rita will dump some on us too next week. Hope you get
some soon.

Shipping is high for that antenna. I got mine at a local shop for $85, no tax,
no shipping. You won't get much less than that.

There are no famous store bought dipoles. You can get them on ebay. But, I left you a post on how to build one. You will not get any better performance from a store bought dipole than a homemade. And you can easily talk skip with them. You would get the same peformance from a homemade dipole as you would if you purchase a A-99 and laid it horizontally.

3745. Wanted: Maycom Spares

Newsgroup: rec.radio.cb
Date: 2005-09-25 22:27:22 UTC
From: Steevo <steevo@uk2k.com>
Message-ID: <dh7884$j9l$1@newsg1.svr.pol.co.uk>
Source record: 204632
Cross-posted to: rec.radio.cb,uk.local.southwest.adverts,uk.rec.radio.cb

Does anyone know a low cost source (other than ebay) for any Maycom EM27 spares (new or used) or any generic cb equipment? Trying to help kit out a local charity with my old EM27 rig but it needs a bit of attention to get it into a usable condition since I am missing everything bar the rig and mic. Would really like to source another EM27 as well (not much use to them just having the one) and a couple of aerials too but since i'm footing the bill myself I'm looking to do it at the lowest possible cost.

Many thanks

LOL!! My cousin has a 125 gallon cap. on his diesel F350. It took
him some 17 hours to drive from his place in Santa Fe to his ranch in Seguin
on Wednesday, that's messed up.

I get the homemade concept, but am disabled and not interested in
trying to build one! I see through your links that the Workman BS-1
is one store bought option. Anyone have any experience with this one?
I know that Workman is a low-cost option.

Thanks.

What are you trying to control, and where do you want to use it?

3757. About lightning etc...

Newsgroup: rec.radio.cb
Date: 2005-09-26 11:31:40 UTC
From: Jan Panteltje <pNaonStpealmtje@yahoo.com>
Message-ID: <4337de6c@news.usenetzone.com>
Source record: 204644

I had the new GPA behind the house up last week....
To make sure I had the best SWR and best signal, I use thick coax, and
left out the coupling piece I had that I used to disconnect in case
lighting was expected.
The weather report was good, with a drop of rain, and the sky was clear....
I went to sleep.
At 3.25 last night I woke up because of an incredible flash and BANG.
Thought "have to buy new gear now, pity..." hehe).
LOL
But nothing was smoking, counted seconds between flashes (more now),
it was overhead alright.
But my neighbor (50 meters away) has a higher mast.
Anyway, it started raining, usually there is enough conductive path then
for it not no strike, I went outside in pyamas, waited for a flash,
(clouds take time to charge up again) and cut the coax, folded it back,
so there was some meters separation.
Went to bed again, noticed I was wet...
Just now I put some connecters and a coupling piece, so that is fixed.
So, anyways the sky is clear and the sun shines, and the SWR is slightly
better now...
But now I am thinking 'lightning detector', I know these exist, was it not
a simple ferrite rod with a detector (for low frequencies)?
Does anyone here use these?
Good diagrams?
I should google anyways....

Anyways I made some other changes too, I am now running the set from a 12 Ah
12V gel battery,
It is charged continously with an AC/DC adapter, no large power supplies needed.
and I can use things when electricity fails, say in case of flooding.

Since we're on the subject....BROADLEAFS and freakin' clover!!!! My beautiful bahia was invaded with that shitty St. Augustine thatch native Floridians call grass when a new neighbor moved in. I just got done going round and round with TrueGreen Chemlawn after they ripped me off. Had their service all spring and summer and it did nothing at all except slightly burn/singe the edges of the leaves on the broadleaf and weeds and make them curl a bit, but they didn't die. In fact, they grew hearty all summer. Had their "manager" come out twice and he wrote down some things and said it would be corrected. It wasn't. I was then told I would get a complete refund since the beginning of my service. It never came. Finally, after having a reporter call the bastards, they sent me a refund check in 3 days!!. Truegreen sucks and are rip off artists. I was told the drunk who was spraying my yard was either using the wrong chemical, watered-down chemicals, or not enough chemicals! A bit more digging reveals the company employs not only drunks, but criminals, as many of their employees have multiple police records. The company also had problems with the Federal Trade Commission regrarding unethical telemarketing practices and the local BBB banks are chock full of complaints regarding these scumbags. Whatever you do, avoid Truegreen/Chemlawn at all costs..at least in Tampa Bay!

>Do you frequently talk skip with them?

(There are no famous store bought dipoles. You can get them on ebay.
But, I left you a post on how to build one. You will not get any better
performance from a store bought dipole than a homemade. And you can
easily talk skip with them.)

AES carries dipole antennas. So do quite a few other Amateur suppliers.
-

(You would get the same peformance from a homemade dipole as you would
if you purchase a A-99 and laid it horizontally.
Vinnie S.)

A dipole should work better than an Antron on its side.

3760. Stateside skip not rolling

Newsgroup: rec.radio.cb

I had a little dx this past weekend, but man was it sparse. In fact, I think this past weekend was the least skip I heard in years. Oh well, the fishing was good! Humidity is slowly starting to give us a break here.

I've not used this dipole. However, I saw your post and thought I'd send
you the link.

Hmm, so your saying they empty the Jails and let the criminals out....
bloody stupid idea that. Why didnt they just send an armoured bus to take
them to another Jail.... now they are going to be free for more
crimespree's. Absolutely bonkers....

Yes it couldnt be any earlier than 77 as thats when you guys got your 40ch
allocation... unless the radio had 23ch but looking at it with its LED
display I doubt it as i seem to recall most (if not all) 23 ch rigs had
cooker dials prior to this..... i may be wrong though
10-4 :o)

On rare occasions you do have "true" 2m skip conditions, and I'm not talking
about simple ducting either.

>.not to mention I'm only licensed above 30 mhz

Try the 6m band. Not open as much HF granted, but you can do DX, world wide
depending on conditions, when it is and since it is above 30 MHz you're
legally licensed to use it at full legal limit power levels.

Here's a site to get you going:

http://6mt.com/

They even have some conversion tips to convert some 11m CB equipment to 6m
use.

Yea, those assholes give the industry a bad name and it's not just in Tampa Bay either. They've been trying to buy my business for years, that's pretty much how they grow anymore..buy up the small guys customer lists.

The turf in your growing zone is much different than here in Ohio, so I'm not sure if the typical three way broadleaf herbicides/mix rates that we use up here apply to your turfgrasses. Your local county extension agency should be of some help in choosing the right control products.

There is no experience. They will all work the same, if you cut them to the lowest SWR. They will work like a homeone. The difference is you don't have to assemble. You said you are handicapped. Can you hang and trim the antenna? If so, that will be the hard part. Building it easy.

Jim, converting a legal CB rig to 6m for Ham use, on the Ham bands ONLY, is perfectly legal. That's one of the benefits of having a Ham license.

Vinnie, they run all the regular modes like FM, data, SSB and including AM. Most of the activity is on SSB. From time to time you'll catch some guys running old 6m gear using AM, which is legal, and there are 6m FM repeaters too on the upper end of the band is some areas. My brother runs a 4 element quad with a 350 watt amp and has made DX contacts all over the place, US, South America etc. The band may sound dead most of the time, but boy when it opens good you just can't find an open frequency because of the beehive of activity!

Hi, I've got a General class. HF is cool but sold my HF rig years ago
and don't plan on replacing it. CB is for citizens, which I like,
as opposed to Ham, in an emergency may all be turned over to "agencies".
The constant drills, 3rd party traffic handling practice...oy vey...
In a real emergency, esp. something local, I'd be thinking CB first but
really people will use what they have, CB, FRS, MURS, Ham. I do like
the simplicity aspect too.

3790. Re: About lightning etc...

Newsgroup: rec.radio.cb
Date: 2005-09-27 10:06:41 UTC
From: Jan Panteltje <pNaonStpealmtje@yahoo.com>
Message-ID: <1127815606.4a13b9e8d5a592bfcc23900c39aa5468@teranews>
Source record: 204677

On a sunny day (Mon, 26 Sep 2005 19:41:07 -0400) it happened jim
<3carroll@optonline.net> wrote in <gG%Ze.2422$dl2.792@fe08.lga>:

>all the work to set up a station and no lightning protection scheme?
>there are many ways to protect the equipment including gas discharge
>kit. any surge protection on the ac input?
>
mmm maybe the situation is different here.
And I do no see how I could make 100% lightning protection, neither
against EMP in case of a nuke attack.
As lighting is on average rather rare...
I found some diagrams of lightning detectors using google.
There seem to be basically 2 types, one with tuned antenna, and the other
with not tuned antenna.
The second would always trigger if anybody here in the area (I am
surrounded by CB fans) presses transmit....
So, last night I wound 500 turns of wire on an old ferrite rod,
tuned it with 100pF, then with 100nF.
I have this old helium neon laser supply, if you remove the laser
(it was kaput anyways), it makes great arcs.
Used oscilloscope to measure signals... and resonance of the ferrite
coil + cap.
So I can tune it from 3kHz to about 50 kHz.

Later I will look at what sort of pre-amp and pulse detector I will use,
it is small can go in a plastic box, and should trigger some beep
that alerts me.

That said, I left the little radio LW receiver I have on at about 163 kHz,
and feeding that into the PC for signal processing would also work.
So much for electronics.

Problem with lightning *protection* is (and I have worked with HV power
stuff) it will easily jump over whatever you make.. we used to play with 100kV
in the lab.... better to prevent it getting in the house in the first place
by disconnecting antennas.
My view anyways, cheap better solutions show me!
Those so called mains surge protectors you plug in the wall for the computer
are not worth the cost of box they come in.
I have one, opened it, it has 2 pins. some mm apart, that are supposed to
function as a spark gap.
In series with that is a VDR (voltage dependent resistor).
That crap will evaporate .... You will have several kV on ground and neutral
in case of a real hit....
And good thing, mains is here where I am all underground cable, so nothing

to worry about.
US is different I know, transformers with wiring on poles outside...
At most you can expect a power failure, when I run on gel battery I am free
of mains (but set is connected to PC for for example packet, voice control,
recording, headset... so once lightning DID make it on the mains it would
all evaporate).
I have seen TV PCBs (used to have a TV repair shop) with all tracks evaporated
because of lightning strike.
YMMV

He had his shoulder repaired, I'd be interested to see how well he throws
without his arm in a sling.

Try being a Browns fan for an exercise in futility!

steve he tore his rotator cuff this past weekend. out for the season.
backup jay fiedler went down with a shoulder injury several minutes
later ans may be out for the season. 3rd string brooks bollinger?
please, put a fork in us...

Couch did? Dang, that guy has the worst luck I've ever seen! Good thing he
made all those millions from the Browns already.

Sorry, you've just stated that you must be in fact handicapped -on your
brain-.
Take your meds and calm down.
However it is entertaining to see someone "jumping within triangles" as
we like to say in german....

Cheers

I bought one of these and only got to use it for a couple days. It took
them a month just to ship it out, by that time I had built a vertical AND
horzontal Dipole on a switchbox. A storm took the tree out holding the vert
and half the horz. I bought an Imax2K. This spring Lightning turned my
Imax into rice flakes all over the back yard. I put up the Bazooka while
the new Imax came in and it was OK. It got the job done but was MUCH more

narrow banded than the Imax. Hence this quote from the site: Greatly attenuates harmonics(almost eliminates interference!!!

That's because it throws it back to the radio in reflected power. If you have TVI problems Buy a filter or quit hacking the radio.

Chad

It looks to me that the GE SuperBase CB was made only for 1 yr of
production.
This is kind of a Rare radio.

Nothing that would be worth buying to protect a CB rig will stop a direct strike. A direct strike will vaporize a gas discharge kit on its way to your radio. But then if you want to spend a few thousand dollars you can get direct-strike protection.

A dipole should work better than an Antron on its side.

It is still being tested, and will likely change.

I am using one of those cheap (Trust 5 Euro Norrod Netherlands)
'Skype compatible' VOIP headsets with mike, the quality is extremely good
actually, as these are made for phone use.

Looks nice too.

Excellent advice! Many places sell so-called lightning protection that isn't worth anything at all. As you stated, nothing will stop a direct strike. It's still best to disconnect during lightning, but putting your coax in a glass won't do anything except turn the glass into flying shrapnel.

hehehe reverse osmosis...

>Jim, converting a legal CB rig to 6m for Ham

>use, on the Ham bands ONLY, is perfectly

>legal. That's one of the benefits of having a

>Ham license.

Benefit? MMMno! Converting a radio,,,,in fact, -working- or tinkering
on ANYTHING is a personal preference, but only a benefit to those who
enjoy such activities. In fact, here is an analogy that will make you
understand how to empathize with others and understand not everyone
thinks like you:
"Before the dumbing down of amateur radio (thanks to organizations such
as the ARRL) operating HF DX on ten meter was perfectly legal for
properly licensed hams. That was one of the benefits of having a license
other than nocode entry level."
Anyways,,,,,you would be hard pressed to find a competent nocode that
could pull off such technological accomplishments correctly as you
describe above. With the floodgates wide open regarding licenses, well,
all I can say is watch what you ask for, because you just might get it.
The nocode freqs on the amateur spectrum are a mirror of the garbage
that USED to be on CB. Hell, with the new rules, my bet is ham radio
will become what CB has been for the last ten years and CB will actually
improve BECAUSE of it.

However IF it wasn't available then even those people wouldn't have any benefit at all. I never, or at least it wasn't, my intention to say that everybody has to use it. It's like when you take a job and get "health benefits", don't miss it until you need it, then you'll really miss what you didn't have if you didn't have the benefit. 8-)

Some think of it that way but you can read opinions from others who definitely don't think that way too.

> operating HF DX on ten meter was perfectly legal for
> properly licensed hams. That was one of the benefits of having a license
> other than nocode entry level."
> Anyways,,,,,you would be hard pressed to find a competent nocode that

> describe above.

Some of those no-code techs are highly skilled and educated engineers and or electronic techs, some who more that likely could design and or build the thing from scratch if they were so inclined. A survey done several years ago by a major Ham magazine, I think it was CQ, found that around 25 percent or better of licensed Hams were employed in some technical field. It also didn't seem to make much difference what class of license they held either.

> With the floodgates wide open regarding licenses, well,
> all I can say is watch what you ask for, because you just might get it.

Well that's what some predict, I don't see it happening. Much the same was said years ago when the privileges for the Tech class was expanded.

> The nocode freqs on the amateur spectrum are a mirror of the garbage
> that USED to be on CB.

You're saying that CBer's are "BAD OPERATORS"? 8-)

> Hell, with the new rules, my bet is ham radio
> will become what CB has been for the last ten years and CB will actually
> improve BECAUSE of it.

You know this isn't an "us verses them" thing. CB radio was envisioned as a short range, picking 27 MHZ was a stupid mistake on the part of the FCC, two way radio communication system for the average Joe, or Jane, to use with out requiring much knowledge of electronics etc. Ham Radio was for those who wanted to know more and experiment with various aspects such as working DX, building and or modifying equipment etc.

CB - Citizens Band is open to all, licensed Ham or not, whether a person chooses to use it or not, that's what "Citizen" means.

3834. Apology to Vinnie S. and forum

Newsgroup: rec.radio.cb
Date: 2005-09-28 02:33:13 UTC
From: Buther Boy <me@privacy.net>
Message-ID: <2qujj19rgdrhimgmp1duelcrb2nbibvlvs@4ax.com>
Source record: 204721

Dear Vinnie S.,

I wish to apologize for jumping to conclusions in an earlier thread. I suffer from schizoaffective disorder, a serious mental illness. No excuse, but I "read" into what you said and thought you were forcing upon me something that I wasn't interested in. I know now you were merely making a suggestion and "nothing more." It should have been clear to me, but unfortunately, it wasn't.

Best Wishes,

Buther Boy

Source record: 204722

Hello, Twist

I think Leland has you on this one. No biggie, however. You see the same thing happening on the roads. Folks who just don't care. They come from all walks of life and may or may not use cb or ham radio. I couldn't believe this afternoon when the traffic light changed. A woman just started walking across the street *against* the light! She didn't care (maybe she did and was looking for a lawsuit). What were we doing in *her* roadway? LOL

There will always be the communications enthusiasts, whether they use cb, amateur radio, or even the Internet.

Best regards from Rochester, NY
Jim

would that be legal to convert type accepted gear to another band?
hehehe reverse osmosis...

>Jim, converting a legal CB rig to 6m for Ham

>use, on the Ham bands ONLY, is perfectly

>legal. That's one of the benefits of having a

>Ham license.

Benefit? MMMno! Converting a radio,,,,in fact, -working- or tinkering on ANYTHING is a personal preference, but only a benefit to those who enjoy such activities. In fact, here is an analogy that will make you understand how to empathize with others and understand not everyone thinks like you:
"Before the dumbing down of amateur radio (thanks to organizations such as the ARRL) operating HF DX on ten meter was perfectly legal for properly licensed hams. That was one of the benefits of having a license other than nocode entry level."
Anyways,,,,,you would be hard pressed to find a competent nocode that could pull off such technological accomplishments correctly as you describe above. With the floodgates wide open regarding licenses, well, all I can say is watch what you ask for, because you just might get it. The nocode freqs on the amateur spectrum are a mirror of the garbage that USED to be on CB. Hell, with the new rules, my bet is ham radio

will become what CB has been for the last ten years and CB will actually improve BECAUSE of it.

So I was not too far away with my comment dated Sept.27th.2005 13:27 ....

Apology accepted.
Now that we know what happened to you. But no excuse for next time
"flipping around" :-)
Nobody here is insulting on you. Just take some little bit of sarcasm
sometimes as ist is: Just a little bit of sarcasm....
Best wishes.

Thanks. I was merely asking you if you were disabled or whatever, and what capacity would it affect you in hanging an antenna, in an attic. Because that would be far more difficult than building one.

Vinnie S.

They work ok to protect against static buildup and nearby strikes, but
they can't be trusted to isolate your system from a direct hit. I have
a couple of these units in my 'blooper box' (failed parts bin). One is
blown in half and the other is melted.

Unless you have a grounded broadcast tower with a large radial field,
the only reliable protection against a direct strike is to disconnect.

Has anyone had any success in converting a stock HR2600 to 6 meters?

I know the synthesizer will tune sufficiently for 6 meters and there
is a jumper that will force the stock CPU to read 50.000 to 55.999
MHz.

In fact, here is an analogy that will make you understand how to
empathize with others and understand not everyone thinks like you:

>You included too.

Sure enough. My fun is the dx. Not everyone enjoys it, but judging by
the popularity of 6 meter and the dropping of code, I'd say the majority
of newer hammies and nocodes DO enjoy it. Dropping the code was the only
way to retain people in the ranks.

>that way too.

-Exactly. An opinion, nothing more.-

operating HF DX on ten meter was perfectly legal for properly licensed hams. That was one of the benefits of having a license other than nocode entry level."
Anyways,,,,,you would be hard pressed to find a competent nocode that could pull off such technological accomplishments correctly as you describe above.

>Some of those no-code techs are highly

>skilled and educated engineers and or

>electronic techs, some who more that likely

>could design and or build the thing from

>scratch if they were so inclined.

I do beleive these folks exist, but as I said, you would be hard pressed to find them.

>A survey done several years ago by a major

>Ham magazine, I think it was CQ, found that

>around 25 percent or better of licensed Hams

>were employed in some technical field. It also

>didn't seem to make much difference what

>class of license they held either.

Yea, well, "techinical" can mean anything from designing the space shuttle to opening a garage door manually.
With the floodgates wide open regarding
licenses, well, all I can say is watch what you ask for, because you just might get it.

>Well that's what some predict, I don't see it

>happening.

(shrug) Then you're not scanning the freqs.

>Much the same was said years ago when the

>privileges for the Tech class was expanded.

And such being said in retrospect, was correct. The dropping of the code, and those who clamored for it (those who didn't spend the time to learn it) are proof positive.

_
The nocode freqs on the amateur spectrum are a mirror of the garbage that USED to be on CB.
>You're saying that CBer's are "BAD

>OPERATORS"? 8-)

-You- always say such things, not I. There is garbage everywhere if one looks hard enough, but by and large, the hammie freqs now sound an awful lot just like CB did in the last solar cycle that gave us heavy skip, only more so than ever before.
Hell, with the new rules, my bet is ham radio will become what CB has been for the last ten years and CB will actually improve BECAUSE of it.

>You know this isn't an "us verses them" thing.

Funny how things have a way of correcting themselves.

>CB radio was envisioned as a short range,

>picking 27 MHZ was a stupid mistake on the

>part of the FCC, two way radio communication
>system for the average Joe, or Jane, to use

>with out requiring much knowledge of

>electronics etc. Ham Radio was for those who

>wanted to know more and experiment with

>various aspects such as working DX, building

>and or modifying equipment etc.

No question about it.

>CB - Citizens Band is open to all, licensed

>Ham or not, whether a person chooses to use

>it or not, that's what "Citizen" means.

Ham radio is the father of cb. With ham radio dying (proved by the feds taking more and more spectrum away), there are few solutions to keep it fresh. Unfortunately, the dropping of the code isnt enough. My prediction is by the year 2020, a license will no longer be needed for ham radio. The apple doesn't fall far from the tree and the writing is most certainly on the wall.

> PolyPhasers do work

Maybe they do,,,against surges and buildups and the like. I found
nothing claiming they protect against a direct strike of lightning..

>They have done a good job of protecting all

>the broadcast equipment I have installed over

>the years

Yea, protected from surges, buildups, etc. These products can work great
for "nearby" zaps etc., but not a direct strike.

> and they have protected many ham and CB

>rigs also.

Not from a direct strike they didn't. Protection that is supposed to
shunt sometimes fail because of the reaction time. Other times the
entire unit fries. I have yet to see a single product on the market that
claims their product will offer total protection against a direct strike
of lightning. Companies will make claims like their product is the best,
or the latest technology or the most affordable ot offers the most
protection, but none offer complete.

Most of that has to do with the wide spread rise of wireless devices which previously were hard wired. The radio spectrum is finite so anybody needing spectrum has to get it from somewhere, and Ham Radio is a target since there are prime sections of spectrum used by a relativity small group of people. That makes it hard to defend against those interests with a huge hoard of cash to spend on lawyers to get the FCC to see things their way.

You may have a point here. I think the Brit's have left it up to the official armature radio organization of Britain to keep track of licenses. This isn't far removed from what you implied.

> The apple doesn't fall far from the tree and the writing is most

> point on this ng is pretty much moot.

The cause for that is most don't see any "benefit" in having a license. I'd rather have the license so IF the FCC shows up, due to some interference complaint, as long as my equipment meets FCC spec's, even running high power amps, I'm protected by part 15 and 95. Otherwise one may have some explaining too do why there is 100's of watts of RF power radiating from the antennae. I personally don't want to be in the later position.

The real benefit I see is all of the things you can do, and with the FCC's blessing too. There's more to Ham Radio than contests and shooting skip.

That's the biggest thing I'm afraid of in a thunderstorm, the lightning,
otherwise it's a fascinating phenomenon. I love standing out in a pouring
gale in the summer if I'm not worried about getting struck down, for being
the heathen I am!

Does anyone have this radio? There are two PC programs that I'm familiar with that can make this radio more enjoyable (FT-817 Commander and Ham Radio Deluxe). It has a 5 watt output on SSB and a 1.5 carrier on AM. All mode. This isn't a CB, but I thought someone here may have it, and may have something to say about it!

naw the radio room remains in the basement. the second floor is
basically done though there is some spackling work to be done for the
jacuzzi. figuring out where to put the ant and how the coax is going to
run, either above or below ground is the next step.

New carpet? It would have been easier to just snip out the solder splashes in the carpet threads with scissors instead of ripping the whole thing out and replacing it. Of course it would "look a little bald in spots" but hey it's only a radio room right? It's just like a pool table. You can tell if its been really used from the beer stains on the felt. 8-))

the basement cinderblock wall had a root growing through a crack which
made a path for water to flow in. new carpet it is though running a
metal detector through the old one will find loads of solder and diodes
and resistors, well you get the idea...

No difference. A good tasting, well balanced beer, is better
than a stuffy glass of wine any day of the week.

Most definitely. One cousin lives in Santa Fe with a second
home in Seguin. His brother lives outside of Austin, in Jonestown.
Their father lives in Dallas.
Haven't been down since last year at this time (Austin has grown
like wildflowers), but try to visit them once every couple of years.

Just put in the hot tub last year, now have to rip up
the deck (Had a bad sprinkler head that was leaking
under it) and replace it. No bigge (costs aside), what
has to be done, must be done.
Coax ain't no problem, running it down from the
top of the 110' tree, under the door into the equip.

>You ougt to see what lightning does to a commercial FM antenna. One of
>the elements was just a nub of molten copper.
That reminds me... of a fireball!
I had just placed a FM antenna (simple dipole, year was 1961 or 1962 or there
about) on our common roof (flat roof) for a neighbor.
I went to my place at the other side of the building, and it started
thundering and raining.
Went back and told him to disconnect that antenna.
When to my room, and had the window open, trees in front of the house, first
floor, fascinating that lightning...
A flash, bang.. nothing. Then a moment later this big round ball, dimly
lighting up, maybe 30 cm (12 inches) in diameter slowly lowered itself in
front of my window.
No heat radiated from it... It then hung perfectly still for a moment.
For a moment I had this fear that it would enter the room.... then it slowly
sank out of view and I heard a loud bang.
Next morning me and the downstairs neighbor went to look at the remains of
his radio antenna he had tied between 2 trees.
Only the ends of the copper wire were still around the trees.
Good thing he had disconnected too.
Now do we deduce from this that erecting an antenna draws lighting effects?
The FM antenna was still OK, how a ball lightning is created nobody seems to
know for sure.
But I have seen one! Beautiful!
Mysterious too...

Almost like there was awareness in it....

And the equipment connected? did it survive? I suffered a direct hit that made my Imax look like flaked rice all over the back yard, gear was up and running and suffered no loss.

Maybe they do,,,against surges and buildups and the like. I found
nothing claiming they protect against a direct strike of lightning..

>They have done a good job of protecting all

>the broadcast equipment I have installed over

>the years

Yea, protected from surges, buildups, etc. These products can work great
for "nearby" zaps etc., but not a direct strike.

> and they have protected many ham and CB

>rigs also.

Not from a direct strike they didn't. Protection that is supposed to
shunt sometimes fail because of the reaction time. Other times the
entire unit fries. I have yet to see a single product on the market that
claims their product will offer total protection against a direct strike
of lightning. Companies will make claims like their product is the best,
or the latest technology or the most affordable ot offers the most
protection, but none offer complete.

Play it safe. Disconnect during the storm. It's the best advice for the
average hammie/cb'er.

Yes, I will contact my station manager and let them know I will be
Disconnecting the EAS transmitter, marti's and all 3 station feeds next time
a storm is approaching.

NO LOSSES means NO LOSSES, no telemetry losses, remote losses, STL losses,
period, phone or coax. It's not IF this tower gets hit during a storm it's
how many times it gets hit. This is the broadcast industry we are talking
about, we don't go of f the air and slam a 4" chunk of hardline in a mason
jar. They DO work this is a 500' tower in the middle of glass-flat central
Illinois!

Get a 'Phasor and ground right and your gear will survive.

Chad

You saw the green flash! No, just kidding!
I have seen a similar example. Flash right through the house in a horizontal line many years ago at the same time as a direct strike, but the ball did not hang around at all. It shot from one end to the other and disappeared..and this was INSIDE.

That would be the way to go if your station manager's station is
comprised of average hammies, cb'ers and they're equipment as
specifically mentioned above.

>NO LOSSES means NO LOSSES, no

>telemetry losses, remote losses, STL losses,

>period, phone or coax. It's not IF this tower

>gets hit during a storm it's how many times it

>gets hit.

I live in the lightning capital of the world. Show me where the products you use offer a guaranteed replacement of all damaged components if your prodcut should fail. You won't find it because they can't accomplish complete protection. However, you WILL find such guarantees against surges by MANY products,,but no guarantees against lighting strikes.

> This is the broadcast industry we are talking

>about, we don't go of f the air and slam a 4"

>chunk of hardline in a mason jar.

Which is why I reiterated for the "average" cb'er or hammie..

>They DO work this is a 500' tower in the

>middle of glass-flat central Illinois!

>Get a 'Phasor and ground right and your gear

>will survive.

>Chad

Well, heck..that's easy as hell to check. The bay area gets strikes every day even on sunshine days, but you will be hard pressed to find someone willing to accept the word of a product that offers no replacement guarantee. Since there is no guarantee, what incentive is there to leave your tuff connected during a storm? Zero. Play it safe. Disconnect your hammie/cb radio gear.

You mean a group of people that continues to get relatively smaller in
number.

>That makes it hard to defend against those

>interests with a huge hoard of cash to spend

>on lawyers to get the FCC to see things their

>way.

That's part of it. The cash aspect involved makes it so it wouldn't
matter at this point if ham radio managed to regain the numbers they had
when it peaked...they would still lose the freqs. The feds have it on
the chopping block because it's not deemed necessary or important with
the sole exception of some emergency freqs being set aside.

_
There are few solutions to keep it
fresh. Unfortunately, the dropping of the code isnt enough. My
prediction is by the year 2020, a license will no longer be needed for
ham radio.

>You may have a point here. I think the Brit's

>organization of Britain to keep track of

>licenses. This isn't far removed from what you

>implied.

People just don't give a care for hammie radio, cb included. It's a non-issue. I've met people who were surprised you could still buy radio and cb gear.

-
The apple doesn't fall far from the tree and the writing is most certainly on the wall.

>Check out the Ham policy news group and

>you'll get an ear, eye, full of the same, both

>pro and con. Pick a side and type away.

Nah! I find I don't have much in common with most of the hammie posters in that hammie group. Phil Kane can occasionally inject fresh material and mind fodder as a few others, but for the most part,,,,,! Some of them post so often you have to wonder how much radio time they get. I have much more in common with the hammies who grace this group.

Well then, holding with that motion, I would say the ticket in this example would be more of an insurance type of thing than a benefit and that's only IF you're blowing watts out.

>There's more to Ham Radio than contests and
>shooting skip.

Which is what a great number of nocodes who refused to learn code and organized to remove it were initially told concerning their entry-level to hammie radio. They were told so much more was available if they would only take the time to actually study and learn something instead of memorizing test questions. But this specific group wanted the privileges without the "benefit" of learning code and getting a higher class ticket.

Stuff was deader than dead today. Excellent local propagation, though.
You gonna be one to reckon with, with that jogunn on top the tower. I
can no longer get away with the bigger beams. One of the mightiest Oaks
in the neigborhood came down during one of those hurricanes last year
and when it fell it took some smaller trees with it. My camoflauge is
all gone so now I'm winging it hoping I get away with what I got now (3
element).

It's been a long time. Nobody believed me when I told them about the
ball lightning the first time. I was only eight or nine.
In the early eighties, I watched a huge storm on July 4 in the west in
Indiana. I saw three large balls of lightning travel parellel to the
ground from cloud to cloud. It was far away. No telling just how big
they were.
I also saw lightning dance along a wire fence of the hog lot.
It was always a real show to watch the summer storms off over the edge
of the mountain and listen to the thunder and the rain on a tin roof.
You can't keep awake for long. What a sweet lullabye.

lucky i make a good wage to be able to do all the work around here the
past 15 months. the 40' tower was a freebee, coax is from the jogunn but
its not long enough for a new location and i dont want to use a patch
but what the hell.. have thoughts about using some rubberized tape used
on fighter aircraft to isolate the coax joint but am not convinced it
will be moisture proof. i'll use the poly conduit we have left over from
the fiber optic runs at work.

What do you think would work better in this situation, a back of the set Radio Shack antenna or a tunable tip rubber duck antenna? With both antennas, I wonder about SWR. Will be testing both in a week or so....

Neither antenna will work worth a damn regardless of SWR. Here's a
suggestion: Scrounge some TV twinlead, use it to make a folded dipole,
hang it on your wall, and connect it to your radio with a 4:1 balun
that you can wind really easily using a core from a junk computer
power supply. It will take you a whole hour to get it put together and
cost you practically nothing.

Neither. You won't get around the block with either of those antennas. Stick with the dipole. You will do fine with the dipole.

Due to restrictions of living in a condo, I had to settle on a
somewhat "compromised" antenna, which I purchased a few days ago. I
went ahead and ordered the miracle whip antenna, which while it is a
compromise on 11 meter, provides me with the ability to "fairly"
accurately pull in short wave broadcasts among other things. I don't
know if anyone here on the board would ever use an antenna like the
miracle whip, but it certainly will do the trick for my application,
albeit a bit of a compromise on 11 meter.

3909. President JFK ... question RF output power !!

Newsgroup: rec.radio.cb
Date: 2005-09-30 09:02:23 UTC
From: bolkethebear@hotmail.com
Message-ID: <1128068392.551631.99930@f14g2000cwb.googlegroups.com>
Source record: 204746

A friend of mine has bought a secondhand President JFK.
The radio works perfect, but the original owner of this unit has
limited the variable output power to only 4 Watts instead of the 15
Watts, because he used an amplifier with a maximum input of 4 Watts.

How do I increase the RF output to the original 15 Watts ?

The JFK is an older model six pin mic, has no ASC and has ' deltatune '
instead of the channel 9-19 switch.

THNX !!

Marc, The Hague The Netherlands !!

Not familiar qith that. The receive is not as critical on an antenna, as transmitting on it. If you want to talk skip or DX, the dipole is the way to go. And if you are in a urban area, you can get locals too. I don't think that whip will be any good, if you are going to transmit on it.

A direct strike will vaporize that little box. Not to dis polyphaser, they
make some excellent products all up and down the line but those discharge
tubes WILL NOT protect against a direct strike. NONE, NADA.

Kevin, WB5RUE

I won't be running a lot of power with this antenna - 1.5 watts AM and
5 watts SSB. But with the radio I'm using, you can modify it with
software, to transmit from 1-470 mhz, minus a few places.

Here's some reviews on the miracle whip:

I have one. It's a neat radio, about the size of large paperback book and all mode too. If I'm staying some place for several days, mainly hotel rooms, I've used it. I does make a great mobile rig, take along a mobile mag mount antenna and plug the rig in the lighter outlet in the rental car. It's also fun to switch over to the air band and monitor the comm's while wasting time at the airport for a flight too. People see a weird looking radio like that and they can't help but look. So far the TSA guys at the airport haven't been too excited about seeing it in the briefcase, they seem to be mainly interested in seeing if my laptop explodes. go figure.

Believe it or not there is a large group of code tested Hams who would
like to see it gone too. That was a bit of a surprise to me.

The sad part is the huge emphasis place on working HF, by old timers and
organizations like the ARRL, like nothing else exists, which isn't true.
If one doesn't care about working HF DX then there really isn't much
motivation to move up.

I am aware of that Kevin, but it has some great ideas how to make good earth
at the mast, and also it reminded me to somehow connect the coax screen to the
mast, now it is isolated.
Probably the GPA base will flash over, but better if the electrons go to
ground then if these go down the coax (outside) even if it is disconnected.
There are some other good suggestions on that site too...

In any case I will try to get my lightning detector working, and disconnect
if it detects anything.

As for the lightning detection electronics - I am now planning on the tuned
ferrite rod, followed by a FET then by a PIC microcontroller... the
small ones I have can replace a LOT of logic for pulse detection and
processing, and have a comparator build in to detect precise voltage levels.
PIC12F629 I have here a box full of...
The advantage is that I can re-program the thing once I get a better idea
what the lighting signals look like (so less false alarm).
The price of these PICs is about a dollar :-) Only 8 pins DIL, internal
oscillator, few micro amps power, hardly any other components needed,
except for a beeper of sorts as alarm.
